They must research their person and create a bibliography of at least 6 sources in proper MLA format. |
| LACC.910.W.3.9 | Draw evidence from literary or informational texts to support analysis, reflection, and research.   |  |  |   |                  |  |

|                  |  |   |  |   |        |  |
|------------------|--|---|--|---|--------|--|
| LACC.910.W.3.9.a |  | Apply grades 9–10 Reading standards to literature(e.g., "Analyze how an author draws on and transforms source material in a specific work [e.g., how Shakespeare treats a theme or topic from <i>David</i> or the Bible or how a later author draws on a play by Shakespeare]").  | 343766   | Eng II B: Unit 5: <i>An Enemy of The People</i><br>Second semester<br>In a text-based and multimedia lesson, students learn about the Cain and Abel motif in <i>An Enemy of the People</i> to compare the brothers' fighting and jealousy to that of Cain and Abel in the Bible. Students complete a practice exercise.   | 120038 | Eng I A: Unit 4 Paper: Literary Analysis of <i>The Pearl</i><br>First semester<br>In a graded writing product with rubric feedback from a teacher, students analyze symbols in the text and cite specific evidence from the text to support analysis and conclusions drawn from the text.  |
| LACC.910.W.3.9.b |  | Apply grades 9–10 Reading standards to literary nonfiction (e.g., "Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is valid and the evidence is relevant and sufficient; identify false statements and fallacious reasoning"). | 343673<br>343680<br>343667<br>343679<br>343682 | Eng II A: Unit 6: Persuasive Speech<br>Video: Supporting Details<br>Lesson: Identifying Material and Immaterial Points<br>Lesson: Recognizing Logical Fallacies<br>Lesson: Addressing Potential Opposing Views and Counterarguments<br>Video: Fact or Fakes<br>First semester<br>Video and text-based instruction on identifying important supporting information to include in writing to support an analysis of a text. Instruction on fallacies and how to identify them in writing is included. Valid reasoning and including relevant evidence in writing to support the purpose, developing an argument and counter argument, and presenting valid evidence to support them are also discussed. | 117640 | Eng II A: Unit 6 Project: Persuasive Speech Presentation<br>First semester<br>In a graded writing and presentation product with rubric feedback from a teacher, students write a persuasive speech citing supporting details from informational texts to support their analysis of a person from history. Students must persuade the audience that chosen historical person deserves recognition for contributions to society. Students must include counter arguments and valid evidence supporting their argument. |

Cluster 4: Range of Writing

|                 |   |  |   |                            |  |
|-----------------|---|--|---|----------------------------|--|
| LACC.910.W.4.10 | Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences. |  | Eng I – Eng II<br>Students write routinely in English I A, I B, II A, and II B. They write short answer responses and complete practice exercises for a variety of lessons. These short writing tasks are part of daily lessons. They also receive instruction on the writing process to write expository, persuasive, and narrative texts. Students write throughout the process and receive feedback on their progress. In addition to the writing for course assessments, students communicate with teachers via e-mail and chats. These communications cover a variety of academic tasks. | 120430<br>120431<br>117665 | Eng I B: Unit 2 Activity: Evaluating the First Draft<br>Second semester<br>In a formative writing product, students write a rough draft of their research paper and have a friend or parent review the draft.<br><br>Eng I B: Unit 2 Paper: Final Draft of Research Paper<br>Second semester<br>In a graded, formative writing product including rubric feedback from a teacher, students submit the final, revised draft of their research paper, including changes found in the peer revision.<br><br>Eng II B: Unit 3 Paper Component: Narrowing Your Short Story Topic<br>Second semester<br>In a graded, formative assessment, students submit the topic they have chosen, along with an outline of their paper which includes information over the setting, plot and characters. |

| LACC.910.L.2.3                            | Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening. |  |  |  |        |   |
| LACC.910.L.2.3.a                          |   | Write and edit work so that it conforms to the guidelines in a style manual (e.g., MLA Handbook, Turabian's Manual for Writers) appropriate for the discipline and writing type. | 349066<br>349067<br>349068                     | Eng I B: Unit 2: Elements of Research<br>Lesson: Organizing Research<br>Lesson: Citing Sources<br>Lesson: Revising Your Research Paper<br>Second semester<br>Through text-based lessons, students are taught about writing a research paper using proper MLA guidelines.   | 120431 | Eng I B: Unit 2 Paper: Final Draft of Research Paper<br>Second semester<br>In a graded, formative writing produce including rubric feedback from a teacher, students conduct research over a topic and write a paper following the format of a research paper over the information found. It will include details, supporting evidence, a formal tone/language, and proper MLA format (including citations for sources used). |
| Cluster 3: Vocabulary Acquisition and Use |   |  |  |  |        |   |
| LACC.910.L.3.4                            | Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 9-10 reading and content, choosing flexibly from a range of strategies.                      |  |  |  |        |   |

|                 |   |   |                                      |  |        |   |
|-----------------|---|---|--------------------------------------|--|--------|---|
| LACC 910.L3.4.a |   | Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.  | 343363<br>343343<br>343316<br>343364 | Eng I A: Unit 1: Vocabulary and Meaning<br>Video: Interpreting Meaning<br>Lesson: Finding Meaning in Word Origins<br>Video: Context Clues<br>Lesson: Finding Meaning in Context<br>Lesson: Analyzing Figurative Language<br>First semester<br>Through text and video-based lessons, students learn to interpret words and phrases and use word origins and context clues to comprehend language. Students also learn how language functions in different contexts. | 119555 | Eng I A: Unit 1: Assignment: Context Clues<br>First semester<br>In a graded, formative assessment, students answer multiple choice questions about the meanings of words, the use of context clues to find the meanings of words, and the purpose of context clues. |
| LACC 910.L3.4.b |   | Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., analyze, analysis, analytical; advocate, advocacy).  | 343269<br>343632                     | Eng II A: Unit 4: <i>Antigone</i><br>Lesson: Finding Meaning in Word Origins<br>Video: Root Words<br>First semester<br>In a text-based lesson including practice exercises, students are taught to use resources such as a dictionary to look-up/check the meanings of unknown words. Students also learn about using etymology, context, and word origins to determine or clarify meaning. These are shown through text and video-based lessons.                  | 119560 | Eng I A: Unit 1 Test: Vocabulary and Meaning<br>First semester<br>Students analyze and apply vocabulary, figurative language, connotation, and context clues to determine meanings of words.  |
| LACC 910.L3.4.c |   | Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, or its etymology. | 348547                               | Eng I A: Unit 3: Exploring Narratives<br>Lesson: "The Struggle to Be an All-American Girl" by Elizabeth Wong<br>First semester<br>In a text-based lesson including practice exercises, students consult references to determine or clarify a word's precise meaning.   | 119560 | Eng I A: Unit 1 Test: Vocabulary and Meaning<br>First semester<br>Students analyze and apply vocabulary, figurative language, connotation, and context clues to determine meanings of words.  |
| LACC 910.L3.4.d |   | Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).   | 348540                               | Eng I A: Unit 3: Exploring Narratives<br>Lesson: "The Scarlet Ibis" by James Hurst<br>First semester<br>In a text-based lesson including practice exercises, students consult references to determine or clarify a word's precise meaning.   | 119560 | Eng I A: Unit 1 Test: Vocabulary and Meaning<br>First semester<br>Students analyze and apply vocabulary, figurative language, connotation, and context clues to determine meanings of words.  |
| LACC 910.L3.5   | Demonstrate understanding of figurative language, word relationships, and nuances in word meanings. |   |                                      |  |        |   |

|                 |   |  |                            |   |        |   |
|-----------------|---|--|----------------------------|---|--------|---|
| LACC 910.L3.5.a |   | Interpret figures of speech (e.g., satire, sarcasm) in context and analyze their role in the text. | 343364<br>343340<br>343342 | Eng I A : Unit 1: Vocabulary and Meaning<br>Lesson: Analyzing Figurative Language<br>Lesson: Reading and Vocabulary in "The Most Dangerous Game"<br>Lesson: After You Read "The Most Dangerous Game"<br>First semester<br>Through text-based lessons including practice exercises, students learn about figurative languages (such as figures of speech) and analyze nuances in the meaning of words with similar denotations. Students also interpret figures of speech (e.g., euphemism, oxymoron) in context and analyze their role in the text. | 119560 | Eng I A: Unit 1 Test: Vocabulary and Meaning<br>First semester<br>Students analyze and apply vocabulary, figurative language, connotation, and context clues to determine meanings of words.  |
| LACC 910.L3.5.b |   | Analyze nuances in the meaning of words with similar denotations.                                  | 343750                     | Eng II B: Unit 4: Poetry<br>Lesson: Denotation and Connotation<br>Second semester<br>In a text-based lesson including practice exercises, students learn the difference between denotation and connotation.   | 117672 | Eng II B: Unit 4: Poetry<br>Unit 4 Assignment: "Base Details"<br>Second semester<br>Students identify the denotative and connotative meanings of words in a poem provided in the text.  |
| LACC 910.L3.6   | Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression. |  |                            | Throughout English I and II, students acquire academic and domain-specific vocabulary. Each introduction to the unit contains key concepts and vocabulary for college readiness.  |        | Throughout English I and II, students acquire academic and domain-specific vocabulary. Each introduction to the unit contains key concepts and vocabulary for college readiness. In stories such as "The Struggle to be an All-American Girl," "The Most Dangerous Game," and science articles in the lesson Academic Writing, students learn and use vocabulary. |

|---|---|--|--|---|--------|--|
| LACC.1112.RL.2.4                              | Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.) |  | 343767<br>343768<br>343769<br>343770<br>343774 | Eng III A: Unit 1: The American Dream<br>Lesson: Rhetoric<br>Lesson: Analyzing Speeches<br>Lesson: Searching for Change<br>Lesson: Context Clues<br>Video: Reading – Context Clues<br>First semester<br>Students are guided through a series of lessons in print and video that show how authors use specific words and phrases to persuade readers and listeners and to create effects and establish connections. Students are given practice in finding meaning through connotation, figurative language, rhetorical strategies, and context clues. | 117684 | Eng III A: Unit 1 Activity: "I Have a Dream" Context Clues<br>First semester<br>In a graded, formative assessment, students write a paragraph about two of the difficult words from the first two paragraphs in the "I Have a Dream" speech and describe their thought processes for using context clues in those paragraphs to figure out the meanings of the words.  |
| LACC.1112.RL.2.5                              | Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.   |  | 343989<br>343991                               | Eng IV A: Unit 2: Utopia and Dystopia<br>Lesson: Literary Elements Grab Bag: Point of View, Frame Narrative, Satire<br>Lesson: Reading Sir Thomas More's Utopia<br>First semester<br>Lessons are presented in various formats including multi-media over literary elements. Students practice determining the author's choices concerning the structure of a literary work. Students read Utopia by Thomas More and consider how More used the frame story and point of view to protect himself from the King's scrutiny.                             | 117756 | Eng IV A: Unit 2 Paper: A Modern Day Sir Thomas More<br>First semester<br>Students fill out a study guide that asks questions about the author's use of point of view, dialogue, frame stories, and details from the novel. Students use this guide to write their own paper in which they use More's model to create their own satiric story. This writing product is graded with a rubric including feedback from the teacher. |
| LACC.1112.RL.2.6                              | Analyze a case in which grasping point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).   |  | 344065<br>344067<br>344069                     | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Reading: "A Modest Proposal" by Jonathan Swift<br>Lesson: Analyzing "A Modest Proposal"<br>Lesson: Outlining a Satirical Argument<br>First semester<br>Students read Jonathan Swift's "A Modest Proposal" after being reviewed on the concepts of satire and irony. They fill out a graphic organizer that helps them understand Swift's purpose and point of view.   | 117792 | Eng IV A: Unit 5 Activity: Outlining a Satirical Argument<br>First semester<br>In a graded, formative assessment, students practice writing their own satire by identifying an actual problem and then proposing their own satirical solutions to it. They also explain what their real solution would be.   |
| Cluster 3: Integration of Knowledge and Ideas |   |  |  |   |        |  |

|  |  |  |  |   |        |   |
|--|--|--|--|---|--------|---|
| LACC.1112.RL.3.7   | Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.) |  | 350743   | Eng IV B: Unit 4: <i>Macbeth</i><br>Lesson: Visions of <i>Macbeth</i><br>Second semester<br>After reading the play, students watch PBS Great Performances film version. Students fill out a viewing guide in which they answer questions about the film adaptation and their reaction to choices the director made.   | 120727 | Eng IV B: Unit 4: <i>Macbeth</i><br>Required Chat<br>Second semester<br>Students contact teacher in chat or by phone for a required chat about their viewing experience of the PBS Great Performances film adaptation of <i>Macbeth</i> . Students evaluate the film version and discuss their reactions to the interpretation.                                     |
| LACC.1112.RL.3.9   | Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.  |  | 343786<br>343788<br>343793<br>343794<br>343795<br>343796 | Eng III A: Unit 2: Early America<br>Lesson: Native America<br>Lesson: Religion and Faith<br>Lesson: Anne Bradstreet<br>Lesson: Jonathan Edwards<br>Lesson: Portrait of American Colonialism<br>Lesson: Thomas Paine and Common Sense<br>First semester<br>Students read legends from the Iroquois and analyze common themes. Students are given samples of Early American literature, from Native American myths and speeches to poems and sermons about religion. They read examples of Puritan and Colonial thought and notice common threads and also differences. | 117697 | Eng III A: Unit 2 Paper: "Sinners in the Hands of an Angry God" and Puritan Beliefs Essay<br>First semester<br>In a graded writing product with rubric feedback from a teacher, students write an essay in which they find evidence of Puritan beliefs in the sermon by Jonathan Edwards. Students quote from the sermon to illustrate examples of Puritan thought. |

In Lincoln's Second Inaugural Address and Elizabeth Cady Stanton's Address to Congress, students identify the themes and how they advance throughout the text.   |

|                                       |   |  |                                      |   |        |   |
|---------------------------------------|---|--|--------------------------------------|---|--------|---|
| LACC.1112.RI.1.3                      | Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.   |  | 343795<br>343796                     | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: Portrait of American Colonialism (1740–1820)<br>Lesson: Thomas Paine and <i>Common Sense</i><br>First semester<br>Students read about Colonial America and study the text of <i>Common Sense</i> by Thomas Paine. They analyze the ideas in the text and then compare those ideas to the ideas from Puritan America.  | 117698 | Eng III A: Unit 2 Activity: Portrait of Religion and Beliefs in America (1620-1820)<br>First semester<br>After studying both Puritan America and Colonial America, students write an essay that states their understanding of the relationship among religion, faith, belief, and the American Dream from the 1600s to the early 1800s. They use research to provide textual support from primary documents and cite their sources.   |
| <b>Cluster 2: Craft and Structure</b> |   |  |                                      |   |        |   |
| LACC.1112.RI.2.4                      | Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in <i>Federalist No. 10</i> ). |  | 343809<br>343810<br>343811<br>343812 | Eng III A: Unit 2: Foundations of the American Dream<br>Video: Individualism Leads to Independence<br>Lesson: Thomas Jefferson<br>Lesson: Declaration of Independence – Timeline and Significance<br>Lesson: A Closer Examination of The Declaration of Independence<br>First semester<br>After watching a video that provides historical context, the students read about Thomas Jefferson and then do a close reading of the Declaration of Independence. They do a vocabulary study of unfamiliar words and key terms repeated by Jefferson. | 117701 | Eng III A: Unit 2 Activity: Declaration Vocabulary Journal and Declaration Close Reading Notes<br>First semester<br>As students read the Declaration, they fill out a Close Reading and Vocabulary Journal. They take comprehension and vocabulary notes, keeping track of which strategies they used for determining word meaning and main ideas. They cite specific textual evidence and support for each close reading response. This is a graded, formative assessment. |
| LACC.1112.RI.2.5                      | Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.  |  | 344013                               | Eng III B: Unit 6: The Postmodern Dream<br>Lesson: César Chávez and "Commonwealth Club Address"<br>Second semester<br>As students read the speech by Cesar Chavez, they consider ways that the speeches of Chavez are similar to those of Dr. King. They find the main argument and look for supporting details. They notice rhetorical devices and imagery. They determine how the elements of the speech work together to engage the audience and convince.   | 117765 | Eng III B: Unit 6 Assignment: King and Chávez<br>Students answer objective, multiple choice questions on a quiz that determines their understanding of different writings by King and Chávez.   |

|  |  |  |                  |  |        |   |
|--|--|--|------------------|--|--------|---|
| LACC.1112.RI.2.6                                     | Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text. |  | 344078           | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Speech: "Every Man a King" by Huey Long<br>First semester<br>Students conduct a web quest for information before reading the speech. As students read the speech, they fill out a worksheet that leads students to a better understanding of the context in which the speech was given. Students establish the main ideas and the purpose of the speech, as well as political factors that shaped the speaker's point of view.   | 117787 | Eng IV A: Unit 5 Test: Poverty and Wealth<br>Students answer objective, multiple choice questions to demonstrate understanding of the unit's content.   |
| <b>Cluster 3: Integration of Knowledge and Ideas</b> |  |  |                  |  |        |   |
| LACC.1112.RI.3.7                                     | Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.   |  | 343952<br>343955 | Eng III B: Unit 4: Independent Research Project<br>Lesson: Independent Project Unit Portfolio: Beginning Your Research<br>Lesson: Reevaluating Your Research Topic Before Starting to Write<br>Second semester<br>The entire unit is a process for producing a research paper. In this lesson, students find information about their topic. They are directed to have at least two primary sources and four secondary sources of information: two or more books or articles found in a library and two or more internet sources. Students take notes on cards. Students then evaluate their information in order to find any weakness or gaps in their research. | 120222 | Eng IV B: Unit 1 Project: Freedom and Rights Multimedia Project<br>Second semester<br>Students create a slideshow presentation synthesizing the theme of freedom and rights from text and media. In Lincoln's Second Inaugural Address and Elizabeth Cady Stanton's Address to Congress, students identify the themes and how they advance throughout the text. |

|  |   |  |  |   |                  |  |
|--|---|--|--|---|------------------|--|
| LACC.1112.RI.3.8   | Delineate and evaluate the reasoning in seminal U.S. texts, including the application of constitutional principles and use of legal reasoning (e.g., in U.S. Supreme Court majority opinions and dissents) and the premises, purposes, and arguments in works of public advocacy (e.g., The Federalist, presidential addresses).    |  | 343786<br>343796<br>344024<br>344027                     | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: Native America<br>First semester<br>In a text-based lesson, students analyze Red Jacket's speech and the Iroquois Constitution, drawing conclusions about the effect of the Constitution on Red Jacket's speech.<br><br>Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: Thomas Paine and Common Sense<br>First semester<br>In a text-based lesson, students analyze the arguments in "Common Sense."<br><br>Eng III B: Unit 6: The Postmodern Dream<br>Lesson: Equality and Integrity of Dreams "Letter from a Birmingham Jail" by King<br>Lesson: The American Creed "Statement on Brown v. Board of Education" by Chief Justice Earl Warren<br>Second semester<br>In a text-based lesson, students evaluate the reasoning in King's "Letter from a Birmingham Jail" and find evidence in the letter of logos.   | 120222           | Eng IV B: Unit 1 Project: Freedom and Rights Multimedia Project<br>Second semester<br>Students create a slideshow presentation synthesizing the theme of freedom and rights from text and media. In Lincoln's Second Inaugural Address and Elizabeth Cady Stanton's Address to Congress, students identify the themes and how they advance throughout the text.  |
| LACC.1112.RI.3.9   | Analyze seventeenth-, eighteenth-century, and nineteenth-century foundational U.S. documents of historical and literary significance (including The Declaration of Independence, the Preamble to the Constitution, the Bill of Rights, and Lincoln's Second Inaugural Address) for their themes, purposes, and rhetorical features. |  | 343796<br>343809<br>343810<br>343811<br>343812<br>349789 | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: Thomas Paine and Common Sense<br>Video: Individualism Leads to Independence<br>Lesson: Thomas Jefferson<br>Lesson: Declaration of Independence – Timeline and Significance<br>Lesson: A Closer Examination of The Declaration of Independence<br>First semester<br>After watching a video that provides historical context, the students read about Thomas Jefferson and then do a close reading of the Declaration of Independence. They do a vocabulary study of unfamiliar words and key terms repeated by Jefferson.<br><br>Eng IV B: Unit 1: Dreamers and Dissenters<br>Lesson: Freedoms and Rights in the U.S.<br>Second semester<br>In this text-based lesson with practice exercises, students compare The Declaration of Independence to the Declaration of Sentiments by Elizabeth Cady Stanton. They also read the Bill of Rights and how the 15th and 19th Amendments laid the groundwork for voting. | 117701<br>120222 | Eng III A: Unit 2 Activity: Declaration Vocabulary Journal and Declaration Close Reading Notes<br>First semester<br>As students read the Declaration, they fill out a Close Reading and Vocabulary Journal. They take comprehension and vocabulary notes, keeping track of which strategies they used for determining word meaning and main ideas. |   |   |  |  |   |        |  |  |
|---|---|--|--|---|--------|--|--|
| LACC.1112.RL.2.4                              | Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.) |  | 343767<br>343768<br>343769<br>343770<br>343774 | Eng III A: Unit 1: The American Dream<br>Lesson: Rhetoric<br>Lesson: Analyzing Speeches<br>Lesson: Searching for Change<br>Lesson: Context Clues<br>Video: Reading – Context Clues<br>First semester<br>Students are guided through a series of lessons in print and video that show how authors use specific words and phrases to persuade readers and listeners and to create effects and establish connections. Students are given practice in finding meaning through connotation, figurative language, rhetorical strategies, and context clues. | 117684 | Eng III A: Unit 1 Activity: "I Have a Dream" Context Clues<br>First semester<br>In a graded, formative assessment, students write a paragraph about two of the difficult words from the first two paragraphs in the "I Have a Dream" speech and describe their thought processes for using context clues in those paragraphs to figure out the meanings of the words.  |  |
| LACC.1112.RL.2.5                              | Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.   |  | 343989<br>343991                               | Eng IV A: Unit 2: Utopia and Dystopia<br>Lesson: Literary Elements Grab Bag: Point of View, Frame Narrative, Satire<br>Lesson: Reading Sir Thomas More's Utopia<br>First semester<br>Lessons are presented in various formats including multi-media over literary elements. Students practice determining the author's choices concerning the structure of a literary work. Students read Utopia by Thomas More and consider how More used the frame story and point of view to protect himself from the King's scrutiny.                             | 117756 | Eng IV A: Unit 2 Paper: A Modern Day Sir Thomas More<br>First semester<br>Students fill out a study guide that asks questions about the author's use of point of view, dialogue, frame stories, and details from the novel. Students use this guide to write their own paper in which they use More's model to create their own satirical story. This writing product is graded with a rubric including feedback from the teacher. |  |
| LACC.1112.RL.2.6                              | Analyze a case in which grasping point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).   |  | 344065<br>344067<br>344069                     | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Reading: "A Modest Proposal" by Jonathan Swift<br>Lesson: Analyzing "A Modest Proposal"<br>Lesson: Outlining a Satirical Argument<br>First semester<br>Students read Jonathan Swift's "A Modest Proposal" after being reviewed on the concepts of satire and irony. They fill out a graphic organizer that helps them understand Swift's purpose and point of view.   | 117792 | Eng IV A: Unit 5 Activity: Outlining a Satirical Argument<br>First semester<br>In a graded, formative assessment, students practice writing their own satire by identifying an actual problem and then proposing their own satirical solutions to it. They also explain what their real solution would be.   |  |
| Cluster 3: Integration of Knowledge and Ideas |   |  |  |   |        |  |  |

|  |  |  |  |   |        |   |  |
|--|--|--|--|---|--------|---|--|
| LACC.1112.RL.3.7   | Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.) |  | 350743   | Eng IV B: Unit 4: <i>Macbeth</i><br>Lesson: Visions of <i>Macbeth</i><br>Second semester<br>After reading the play, students watch PBS Great Performances film version. Students fill out a viewing guide in which they answer questions about the film adaptation and their reaction to choices the director made.   | 120727 | Eng IV B: Unit 4: <i>Macbeth</i><br>Required Chat<br>Second semester<br>Students contact teacher in chat or by phone for a required chat about their viewing experience of the PBS Great Performances film adaptation of <i>Macbeth</i> . Students evaluate the film version and discuss their reactions to the interpretation.                                     |  |
| LACC.1112.RL.3.9   | Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.  |  | 343786<br>343788<br>343793<br>343794<br>343795<br>343796 | Eng III A: Unit 2: Early America<br>Lesson: Native America<br>Lesson: Religion and Faith<br>Lesson: Anne Bradstreet<br>Lesson: Jonathan Edwards<br>Lesson: Portrait of American Colonialism<br>Lesson: Thomas Paine and Common Sense<br>First semester<br>Students read legends from the Iroquois and analyze common themes. Students are given samples of Early American literature, from Native American myths and speeches to poems and sermons about religion. They read examples of Puritan and Colonial thought and notice common threads and also differences. | 117697 | Eng III A: Unit 2 Paper: "Sinners in the Hands of an Angry God" and Puritan Beliefs Essay<br>First semester<br>In a graded writing product with rubric feedback from a teacher, students write an essay in which they find evidence of Puritan beliefs in the sermon by Jonathan Edwards. Students quote from the sermon to illustrate examples of Puritan thought. |  |

| LACC.1112.RI.1.1  | Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.  |  | 344065<br>344067   | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Reading "A Modest Proposal" by Jonathan Swift<br>Lesson: Analyzing "A Modest Proposal"<br>First semester<br>In a text-based lesson, students read the satirical essay and analyze the indications of satire while determining through inference the true purpose of the essay.   | 117697                     | Eng III A: Unit 2 Paper: "Sinners in the Hands of an Angry God" and Puritan Beliefs Essay<br>First semester<br>In a graded writing product with rubric feedback from a teacher, students find evidence of Puritan beliefs in the sermon by Jonathan Edwards. Students quote from the sermon to illustrate examples of Puritan thought.   |
| LACC.1112.RI.1.2  | Determine two or more central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an objective summary of the text.  |  | 344112   | Eng IV B: Unit 6: Time and Eternity<br>Lesson: "We Choose to Go to the Moon" by President Kennedy<br>Second semester<br>Text, audio, and video versions of the speech by President Kennedy give students the opportunity to witness a moment of historical importance while appreciating a speech with several purposes and ideas.   | 120222                     | Eng IV B: Unit 1 Project: Freedom and Rights Multimedia Project<br>Second semester<br>Students create a slideshow presentation synthesizing the theme of freedom and rights from text and media. In Lincoln's Second Inaugural Address and Elizabeth Cady Stanton's Address to Congress, students identify the themes and how they advance throughout the text.  |

|                                       |   |  |                                      |   |        |   |
|---------------------------------------|---|--|--------------------------------------|---|--------|---|
| LACC.1112.RI.1.3                      | Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.   |  | 343795<br>343796                     | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: Portrait of American Colonialism (1740 – 1820)<br>Lesson: Thomas Paine and <i>Common Sense</i><br>First semester<br>Students read about Colonial America and study the text of <i>Common Sense</i> by Thomas Paine. They analyze the ideas in the text and then compare those ideas to the ideas from Puritan America.  | 117698 | Eng III A: Unit 2 Activity: Portrait of Religion and Beliefs in America (1620-1820)<br>First semester<br>After studying both Puritan America and Colonial America, students write an essay that states their understanding of the relationship among religion, faith, belief, and the American Dream from the 1600s to the early 1800s. They use research to provide textual support from primary documents and cite their sources.   |
| <b>Cluster 2: Craft and Structure</b> |   |  |                                      |   |        |   |
| LACC.1112.RI.2.4                      | Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in <i>Federalist No. 10</i> ). |  | 343809<br>343810<br>343811<br>343812 | Eng III A: Unit 2: Foundations of the American Dream<br>Video: Individualism Leads to Independence<br>Lesson: Thomas Jefferson<br>Lesson: Declaration of Independence – Timeline and Significance<br>Lesson: A Closer Examination of The Declaration of Independence<br>First semester<br>After watching a video that provides historical context, the students read about Thomas Jefferson and then do a close reading of the Declaration of Independence. They do a vocabulary study of unfamiliar words and key terms repeated by Jefferson. | 117701 | Eng III A: Unit 2 Activity: Declaration Vocabulary Journal and Declaration Close Reading Notes<br>First semester<br>As students read the Declaration, they fill out a Close Reading and Vocabulary Journal. They take comprehension and vocabulary notes, keeping track of which strategies they used for determining word meaning and main ideas. They cite specific textual evidence and support for each close reading response. This is a graded, formative assessment. |
| LACC.1112.RI.2.5                      | Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.  |  | 344013                               | Eng III B: Unit 6: The Postmodern Dream<br>Lesson: César Chávez and "Commonwealth Club Address"<br>Second semester<br>As students read the speech by Cesar Chavez, they consider ways that the speeches of Chavez are similar to those of Dr. King. They find the main argument and look for supporting details. They notice rhetorical devices and imagery. They determine how the elements of the speech work together to engage the audience and convince.   | 117765 | Eng III B: Unit 6 Assignment: King and Chávez<br>Students answer objective, multiple choice questions on a quiz that determines their understanding of different writings by King and Chávez.   |

|  |  |  |                  |  |        |  |
|--|--|--|------------------|--|--------|--|
| LACC.1112.RI.2.6                                     | Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text. |  | 344078           | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Speech: "Every Man a King" by Huey Long<br>First semester<br>Students conduct a web quest for information before reading the speech. As students read the speech, they fill out a worksheet that leads students to a better understanding of the context in which the speech was given. Students establish the main ideas and the purpose of the speech, as well as political factors that shaped the speaker's point of view.   | 117787 | Eng IV A: Unit 5 Test: Poverty and Wealth<br>Students answer objective, multiple choice questions to demonstrate understanding of the unit's content.  |
| <b>Cluster 3: Integration of Knowledge and Ideas</b> |  |  |                  |  |        |  |
| LACC.1112.RI.3.7                                     | Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.   |  | 343952<br>343955 | Eng III B: Unit 4: Independent Research Project<br>Lesson: Independent Project Unit Portfolio: Beginning Your Research<br>Lesson: Reevaluating Your Research Topic Before Starting to Write<br>Second semester<br>The entire unit is a process for producing a research paper. In this lesson, students find information about their topic. They are directed to have at least two primary sources and four secondary sources of information: two or more books or articles found in a library and two or more internet sources. Students take notes on cards. Students then evaluate their information in order to find any weakness or gaps in their research. | 120222 | Eng IV B: Unit 1 Project: Freedom and Rights<br>Multimedia Project<br>Second semester<br>Students create a slideshow presentation synthesizing the theme of freedom and rights from text and media. In Lincoln's Second Inaugural Address and Elizabeth Cady Stanton's Address to Congress, students identify the themes and how they advance throughout the text. |

| LACC.1112.RL.1.1                                      | Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.  |           | 349749   | Eng III B: Unit 2: Drama and the American Dream<br>Lesson: "Trifles" by Susan Glaspell<br>Second semester<br>In a text-based lesson with practice exercises, students find passages in the play to support different themes. Students examine the play for clues as to what happened. Students use text to support their inferences and conclusions about the plot.   | 117771        | Eng IV A: Unit 3 Paper: Analyzing Passages from King Lear<br>First semester<br>In a graded, formative assessment, for each scene read in King Lear, students choose one passage to examine how it contributes to the scene or play.  |
| LACC.1112.RL.1.2                                      | Determine two or more themes or central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to produce a complex account; provide an objective summary of the text.   |           | 350743   | Eng IV B: Unit 4: <i>Macbeth</i><br>Lesson: Visions of <i>Macbeth</i><br>Second semester<br>In a text-based lesson with practice exercise, students trace the development of two themes in <i>Macbeth</i> by finding quotes from the play which illustrate those themes in acts throughout the play.  | 120727        | Eng IV B: Unit 4 Test: <i>Macbeth</i> : Essay Questions<br>Second semester<br>In a graded, summative assessment, students answer essay questions based on literary elements from the play. One question asks them to state a theme and give evidence from the play using textual support.  |
| LACC.1112.RL.1.3                                      | Analyze the impact of the author's choices regarding how to develop and relate elements of a story or drama (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).   |           | 343778<br>343779<br>343780                     | Eng III A: Unit 1: The American Dream<br>Lesson: The Basic Elements of Plot<br>Lesson: Main Idea and Theme<br>Lesson: The Threads of Theme Viewpoint in Fiction<br>First semester<br>Unit 1 includes lessons that review students over structural elements of fiction, such as plot, setting, character, and theme. Students practice analyzing the structural elements of both fiction and nonfiction.   | 117716        | Eng III A: Unit 6 Activity: Poe and Sensory Language<br>First semester<br>In a graded, formative assessment, students analyze three Poe quotes from three different works and explain how the sensory words effect the reader and passage.   |
| <b>Cluster 2: Craft and Structure</b>                 |   |           |  |   |               |  |
| LACC.1112.RL.2.4                                      | Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.) |           | 343767<br>343768<br>343769<br>343770<br>343774 | Eng III A: Unit 1: The American Dream<br>Lesson: Rhetoric<br>Lesson: Analyzing Speeches<br>Lesson: Searching for Change<br>Lesson: Context Clues<br>Video: Reading – Context Clues<br>First semester<br>Students are guided through a series of lessons in print and video that show how authors use specific words and phrases to persuade readers and listeners and to create effects and establish connections. Students are given practice in finding meaning through connotation, figurative language, rhetorical strategies, and context clues. | 117684        | Eng III A: Unit 1 Activity: "I Have a Dream" Context Clues<br>First semester<br>In a graded, formative assessment, students write a paragraph about two of the difficult words from the first two paragraphs in the "I Have a Dream" speech and describe their thought processes for using context clues in those paragraphs to figure out the meanings of the words.  |
| LACC.1112.RL.2.5                                      | Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.   |           | 343989<br>343991                               | Eng IV A: Unit 2: Utopia and Dystopia<br>Lesson: Literary Elements Grab Bag: Point of View, Frame Narrative, Satire<br>Lesson: Reading Sir Thomas More's Utopia<br>First semester<br>Lessons are presented in various formats including multi-media over literary elements. Students practice determining the author's choices concerning the structure of a literary work. Students read Utopia by Thomas More and consider how More used the frame story and point of view to protect himself from the King's scrutiny.                             | 117756        | Eng IV A: Unit 2 Paper: A Modern Day Sir Thomas More<br>First semester<br>Students fill out a study guide that asks questions about the author's use of point of view, dialogue, frame stories, and details from the novel. Students use this guide to write their own paper in which they use More's model to create their own satiric story. This writing product is graded with a rubric including feedback from the teacher. |
| LACC.1112.RL.2.6                                      | Analyze a case in which grasping point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).   |           | 344065<br>344067<br>344069                     | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Reading: "A Modest Proposal" by Jonathan Swift<br>Lesson: Analyzing "A Modest Proposal"<br>Lesson: Outlining a Satirical Argument<br>First semester<br>Students read Jonathan Swift's "A Modest Proposal" after being reviewed on the concepts of satire and irony. They fill out a graphic organizer that helps them understand Swift's purpose and point of view.   | 117792        | Eng IV A: Unit 5 Activity: Outlining a Satirical Argument<br>First semester<br>In a graded, formative assessment, students practice writing their own satire by identifying an actual problem and then proposing their own satirical solutions to it. They also explain what their real solution would be.   |
| <b>Cluster 3: Integration of Knowledge and Ideas</b>  |   |           |  |   |               |  |

|  |  |  |  |   |        |   |
|--|--|--|--|---|--------|---|
| LACC.1112.RL.3.7   | Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.) |  | 350743   | Eng IV B: Unit 4: <i>Macbeth</i><br>Lesson: Visions of <i>Macbeth</i><br>Second semester<br>After reading the play, students watch PBS Great Performances film version. Students fill out a viewing guide in which they answer questions about the film adaptation and their reaction to choices the director made.   | 120727 | Eng IV B: Unit 4: <i>Macbeth</i><br>Required Chat<br>Second semester<br>Students contact teacher in chat or by phone for a required chat about their viewing experience of the PBS Great Performances film adaptation of <i>Macbeth</i> . Students evaluate the film version and discuss their reactions to the interpretation.                                     |
| LACC.1112.RL.3.9   | Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.  |  | 343786<br>343788<br>343793<br>343794<br>343795<br>343796 | Eng III A: Unit 2: Early America<br>Lesson: Native America<br>Lesson: Religion and Faith<br>Lesson: Anne Bradstreet<br>Lesson: Jonathan Edwards<br>Lesson: Portrait of American Colonialism<br>Lesson: Thomas Paine and Common Sense<br>First semester<br>Students read legends from the Iroquois and analyze common themes. Students are given samples of Early American literature, from Native American myths and speeches to poems and sermons about religion. They read examples of Puritan and Colonial thought and notice common threads and also differences. | 117697 | Eng III A: Unit 2 Paper: "Sinners in the Hands of an Angry God" and Puritan Beliefs Essay<br>First semester<br>In a graded writing product with rubric feedback from a teacher, students write an essay in which they find evidence of Puritan beliefs in the sermon by Jonathan Edwards. Students quote from the sermon to illustrate examples of Puritan thought. |

|-------------------|---|---|----------------------------|---|----------------------------|---|
| LACC.1112.L.3.4.b |   | Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).  | 344052                     | Eng IV A: Unit 4: War and Peace<br>Lesson: Translating Root Words Instructions<br>First semester<br>By adding different affixes to root words, students create new forms of words. Students keep their work on a worksheet.   | 117768                     | Eng IV A: Unit 3 Vocabulary Check: Greek and Latin Roots<br>Vocabulary Check: Translating Root Words<br>First semester<br>Students answer multiple choice questions to show understanding of Latin and Greek roots and words derivations.   |
| LACC.1112.L.3.4.c |   | Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, its etymology, or its standard usage. | 343812                     | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: A Closer Examination of the Declaration of Independence<br>First semester<br>As students complete their close reading assignment, they use different strategies to determine word meaning. Dictionary Reference is one of the methods used.   | 117701                     | Eng III A: Unit 2 Activity: Declaration Vocabulary Journal and Declaration Close Reading Notes<br>First semester<br>As students read the Declaration, they fill out a Close Reading and Vocabulary Journal. They take comprehension and vocabulary notes, keeping track of which strategies they used for determining word meaning and main ideas. They cite specific textual evidence and support for each close reading response. This is a graded, formative assessment. |
| LACC.1112.L.3.4.d |   | Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).   | 343984<br>344007<br>344047 | Eng IV A: Unit 2: Utopia and Dystopia<br>Lesson: Vocabulary: Using Context Clues I<br>Eng IV A U3: Order and Chaos<br>Lesson: Vocabulary: Using Context Clues II<br>Eng IV A U4: War and Peace<br>Lesson: Vocabulary: Using Context Clues III<br>First semester<br>After students guess the meaning of a word based on its context, they consult dictionary.com to verify the meaning of the word. Students fill out a worksheet as they work through the list and use it on the quiz | 117755<br>117764<br>117784 | Eng IV A: Unit 2 Vocabulary Check: Using Context Clues I<br>Eng IV A: Unit 3 Vocabulary Check: Using Context Clues II<br>Eng IV A: Unit 4: Vocabulary Check: Using Context Clues III<br>First semester<br>Students take multiple choice quizzes that check their skills in using context clues.   |
| LACC.1112.L.3.5   | Demonstrate understanding of figurative language, word relationships, and nuances in word meanings. |   |                            |   |                            |   |

|                   |   |  |                  |   |        |   |
|-------------------|---|--|------------------|---|--------|---|
| LACC.1112.L.3.5.a |   | Interpret figures of speech (e.g., satire, sarcasm) in context and analyze their role in the text. | 343865<br>343985 | Eng III A: Unit 5: Poetry in America<br>Lesson: Kant Get Enough of Figurative Language<br>First semester<br>Students watch a multi-media presentation to receive explicit instruction and review in the types and examples of figurative language.<br><br>Eng III B: Unit 5: The Modern American Dream<br>Lesson: Elements of Poetry<br>Second semester<br>Students review figurative language as one part of the lesson on the elements of poetry. | 117753 | Eng III B: Unit 5 Assignment: Elements of Poetry<br>Second semester<br>In a multiple choice assignment, students demonstrate understanding of figurative language, among other poetic elements                      |
| LACC.1112.L.3.5.b |   | Analyze nuances in the meaning of words with similar denotations.                                  | 344053           | Eng IV A: U4: War and Peace<br>Lesson: From a 'B' to an 'A'<br>First semester<br>In a lesson on improving the essay through revision, students receive explicit instruction about how to revise their word choice so that their words are stronger or more interesting. Particular attention is called to words that have similar denotations but different connotations.   | 117773 | Eng IV A: Unit 4 Test: War and Peace<br>First semester<br>In a multiple choice summative assessment, students analyze words and similar denotations.  |
| LACC.1112.L.3.6   | Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression. |  |                  | English III and English IV<br>Through readings, text-based lessons and comprehension questions, students acquire new vocabulary. Each unit introduction provides key concepts and vocabulary for college readiness.   |        | English III and English IV<br>Through readings, text-based lessons and comprehension questions, students acquire new vocabulary. Each unit introduction provides key concepts and vocabulary for college readiness. |

| <b>Cluster 1: Key Ideas and Details</b>               |   |           |                            |   |               |   |
| LACC.1112.RL.1.1                                      | Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.  |           | 349749                     | Eng III B: Unit 2: Drama and the American Dream<br>Lesson: "Trifles" by Susan Glaspell<br>Second semester<br>In a text-based lesson with practice exercises, students find passages in the play to support different themes. Students examine the play for clues as to what happened. Students use text to support their inferences and conclusions about the plot.                                     | 117771        | Eng IV A: Unit 3 Paper: Analyzing Passages from King Lear<br>First semester<br>In a graded, formative assessment, for each scene read in King Lear, students choose one passage to examine how it contributes to the scene or play.   |
| LACC.1112.RL.1.2                                      | Determine two or more themes or central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to produce a complex account, provide an objective summary of the text. |           | 350743                     | Eng IV B: Unit 4: <i>Macbeth</i><br>Lesson: Visions of <i>Macbeth</i><br>Second semester<br>In a text-based lesson with practice exercise, students trace the development of two themes in <i>Macbeth</i> by finding quotes from the play which illustrate those themes in acts throughout the play.  | 120727        | Eng IV B: Unit 4 Test: <i>Macbeth</i> : Essay Questions<br>Second semester<br>In a graded, summative assessment, students answer essay questions based on literary elements from the play. One question asks them to state a theme and give evidence from the play using textual support. |
| LACC.1112.RL.1.3                                      | Analyze the impact of the author's choices regarding how to develop and relate elements of a story or drama (e.g., where a story is set, how the action is ordered, how the characters are introduced and developed).                           |           | 343778<br>343779<br>343780 | Eng III A: Unit 1: The American Dream<br>Lesson: The Basic Elements of Plot<br>Lesson: Main Idea and Theme<br>Lesson: The Threads of Theme Viewpoint in Fiction<br>First semester<br>Unit 1 includes lessons that review students over structural elements of fiction, such as plot, setting, character, and theme. Students practice analyzing the structural elements of both fiction and nonfiction. | 117716        | Eng III A: Unit 6 Activity: Poe and Sensory Language<br>First semester<br>In a graded, formative assessment, students analyze three Poe quotes from three different works and explain how the sensory words effect the reader and passage.  |
| <b>Cluster 2: Craft and Structure</b>                 |   |           |                            |   |               |   |

|   |   |  |  |   |        |  |
|---|---|--|--|---|--------|--|
| LACC.1112.RL.2.4                              | Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the impact of specific word choices on meaning and tone, including words with multiple meanings or language that is particularly fresh, engaging, or beautiful. (Include Shakespeare as well as other authors.) |  | 343767<br>343768<br>343769<br>343770<br>343774 | Eng III A: Unit 1: The American Dream<br>Lesson: Rhetoric<br>Lesson: Analyzing Speeches<br>Lesson: Searching for Change<br>Lesson: Context Clues<br>Video: Reading – Context Clues<br>First semester<br>Students are guided through a series of lessons in print and video that show how authors use specific words and phrases to persuade readers and listeners and to create effects and establish connections. Students are given practice in finding meaning through connotation, figurative language, rhetorical strategies, and context clues. | 117684 | Eng III A: Unit 1 Activity: "I Have a Dream" Context Clues<br>First semester<br>In a graded, formative assessment, students write a paragraph about two of the difficult words from the first two paragraphs in the "I Have a Dream" speech and describe their thought processes for using context clues in those paragraphs to figure out the meanings of the words.  |
| LACC.1112.RL.2.5                              | Analyze how an author's choices concerning how to structure specific parts of a text (e.g., the choice of where to begin or end a story, the choice to provide a comedic or tragic resolution) contribute to its overall structure and meaning as well as its aesthetic impact.   |  | 343989<br>343991                               | Eng IV A: Unit 2: Utopia and Dystopia<br>Lesson: Literary Elements Grab Bag: Point of View, Frame Narrative, Satire<br>Lesson: Reading Sir Thomas More's Utopia<br>First semester<br>Lessons are presented in various formats including multi-media over literary elements. Students practice determining the author's choices concerning the structure of a literary work. Students read Utopia by Thomas More and consider how More used the frame story and point of view to protect himself from the King's scrutiny.                             | 117756 | Eng IV A: Unit 2 Paper: A Modern Day Sir Thomas More<br>First semester<br>Students fill out a study guide that asks questions about the author's use of point of view, dialogue, frame stories, and details from the novel. Students use this guide to write their own paper in which they use More's model to create their own satiric story. This writing product is graded with a rubric including feedback from the teacher. |
| LACC.1112.RL.2.6                              | Analyze a case in which grasping point of view requires distinguishing what is directly stated in a text from what is really meant (e.g., satire, sarcasm, irony, or understatement).   |  | 344065<br>344067<br>344069                     | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Reading: "A Modest Proposal" by Jonathan Swift<br>Lesson: Analyzing "A Modest Proposal"<br>Lesson: Outlining a Satirical Argument<br>First semester<br>Students read Jonathan Swift's "A Modest Proposal" after being reviewed on the concepts of satire and irony. They fill out a graphic organizer that helps them understand Swift's purpose and point of view.   | 117792 | Eng IV A: Unit 5 Activity: Outlining a Satirical Argument<br>First semester<br>In a graded, formative assessment, students practice writing their own satire by identifying an actual problem and then proposing their own satirical solutions to it. They also explain what their real solution would be.   |
| Cluster 3: Integration of Knowledge and Ideas |   |  |  |   |        |  |

|  |  |  |  |   |        |   |
|--|--|--|--|---|--------|---|
| LACC.1112.RL.3.7   | Analyze multiple interpretations of a story, drama, or poem (e.g., recorded or live production of a play or recorded novel or poetry), evaluating how each version interprets the source text. (Include at least one play by Shakespeare and one play by an American dramatist.) |  | 350743   | Eng IV B: Unit 4: <i>Macbeth</i><br>Lesson: Visions of <i>Macbeth</i><br>Second semester<br>After reading the play, students watch PBS Great Performances film version. Students fill out a viewing guide in which they answer questions about the film adaptation and their reaction to choices the director made.   | 120727 | Eng IV B: Unit 4: <i>Macbeth</i><br>Required Chat<br>Second semester<br>Students contact teacher in chat or by phone for a required chat about their viewing experience of the PBS Great Performances film adaptation of <i>Macbeth</i> . Students evaluate the film version and discuss their reactions to the interpretation.                                     |
| LACC.1112.RL.3.9   | Demonstrate knowledge of eighteenth-, nineteenth- and early-twentieth-century foundational works of American literature, including how two or more texts from the same period treat similar themes or topics.  |  | 343786<br>343788<br>343793<br>343794<br>343795<br>343796 | Eng III A: Unit 2: Early America<br>Lesson: Native America<br>Lesson: Religion and Faith<br>Lesson: Anne Bradstreet<br>Lesson: Jonathan Edwards<br>Lesson: Portrait of American Colonialism<br>Lesson: Thomas Paine and Common Sense<br>First semester<br>Students read legends from the Iroquois and analyze common themes. Students are given samples of Early American literature, from Native American myths and speeches to poems and sermons about religion. They read examples of Puritan and Colonial thought and notice common threads and also differences. | 117697 | Eng III A: Unit 2 Paper: "Sinners in the Hands of an Angry God" and Puritan Beliefs Essay<br>First semester<br>In a graded writing product with rubric feedback from a teacher, students write an essay in which they find evidence of Puritan beliefs in the sermon by Jonathan Edwards. Students quote from the sermon to illustrate examples of Puritan thought. |
| Cluster 4: Range of Reading and Level of Text Complexity |  |  |  |   |        |   |

|   |   |  |  |  |                            |   |
|---|---|--|--|--|----------------------------|---|
| LACC.1112.RL.4.10   | By the end of grade 11, read and comprehend literature, including stories, dramas, and poems, in the grades 11–CCR text complexity band proficiently, with scaffolding as needed at the high end of the range. By the end of grade 12, read and comprehend literature, including stories, dramas, and poems, at the high end of the grades 11–CCR text complexity band independently and proficiently |  | 343857<br>343858<br>343866<br>343868<br>343869<br>343871<br>344020<br>344021 | English III and English IV includes Self-Selected Reading Requirements<br><br>Below is a sampling of readings in Advanced Academic's Eng III and IV courses:<br><br>Eng III A: Unit 3: <i>The Scarlet Letter</i><br>First semester<br>Students read this grade-level text independently. The entire unit takes students through <i>The Scarlet Letter</i> , providing explicit lessons on historical context and literary elements. Many video lessons are included.<br><br>Eng III A: Unit 5: Poetry in America<br>Lesson: Henry David Thoreau and "Walden Pond"<br>Lesson: The Poetry of Walt Whitman<br>Lesson: Lyric Poetry<br>Lesson: Narrative Poetry<br>Lesson: The Romantic American Identity<br>Lesson: Emily Dickinson's Poetry<br>First semester<br>Students read independently, discuss, and write about 19th and early 20th century American poetry. Explicit instruction and reviews in poetry | 120530<br>117717<br>117771 | Eng III A: Unit 3 Required Chat: Modern Day <i>Scarlet Letter</i><br>First semester<br>In a graded discussion thread, students chat with a teacher about ideas relating to ostracism, forgiveness, and redemption.<br><br>Eng III A: Unit 6 Paper: Biography Synthesis Writing Assignment<br>First semester<br>In a graded writing product, students research either Hawthorne or Poe and read several of their works. Students produce a biographical synthesis essay which combines the research about the life of the author with his works.<br><br>Eng IV A: Unit 3 Paper: Analyzing Passages from <i>King Lear</i><br>First semester<br>For each scene read in <i>King Lear</i> , students choose one passage to examine. That passage should be significant to that particular scene as well as to the larger play. Students will quote the passage, identify who is speaking and to whom, then analyze the passage by exploring its significance to and impact on the overall story. |
| <b>Strand: Reading Standards for Informational Text 11-12</b> |   |  |  |  |                            |   |
| <b>Cluster 1: Key Ideas and Details</b>                       |   |  |  |  |                            |   |
| LACC.1112.RI.1.1  | Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text, including determining where the text leaves matters uncertain.  |  | 344065<br>344067   | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Reading "A Modest Proposal" by Jonathan Swift<br>Lesson: Analyzing "A Modest Proposal"<br>First semester<br>In a text-based lesson, students read the satirical essay and analyze the indications of satire while determining through inference the true purpose of the essay.   | 117697                     | Eng III A: Unit 2 Paper: "Sinners in the Hands of an Angry God" and Puritan Beliefs Essay<br>First semester<br>In a graded writing product with rubric feedback from a teacher, students find evidence of Puritan beliefs in the sermon by Jonathan Edwards. Students quote from the sermon to illustrate examples of Puritan thought.  |
| LACC.1112.RI.1.2  | Determine two or more central ideas of a text and analyze their development over the course of the text, including how they interact and build on one another to provide a complex analysis; provide an objective summary of the text.  |  | 344112   | Eng IV B: Unit 6: Time and Eternity<br>Lesson: "We Choose to Go to the Moon" by President Kennedy<br>Second semester<br>Text, audio, and video versions of the speech by President Kennedy give students the opportunity to witness a moment of historical importance while appreciating a speech with several purposes and ideas.   | 120222                     | Eng IV B: Unit 1 Project: Freedom and Rights Multimedia Project<br>Second semester<br>Students create a slideshow presentation synthesizing the theme of freedom and rights from text and media. In Lincoln's Second Inaugural Address and Elizabeth Gady Stanton's Address to Congress, students identify the themes and how they advance throughout the text.   |
| LACC.1112.RI.1.3  | Analyze a complex set of ideas or sequence of events and explain how specific individuals, ideas, or events interact and develop over the course of the text.   |  | 343795<br>343796   | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: Portrait of American Colonialism (1740–1820)<br>Lesson: Thomas Paine and <i>Common Sense</i><br>First semester<br>Students read about Colonial America and study the text of <i>Common Sense</i> by Thomas Paine. They analyze the ideas in the text and then compare those ideas to the ideas from Puritan America.   | 117698                     | Eng III A: Unit 2 Activity: Portrait of Religion and Beliefs in America (1620-1820)<br>First semester<br>After studying both Puritan America and Colonial America, students write an essay that states their understanding of the relationship among religion, faith, belief, and the American Dream from the 1600s to the early 1800s. They use research to provide textual support from primary documents and cite their sources.   |
| <b>Cluster 2: Craft and Structure</b>                         |   |  |  |  |                            |   |
| LACC.1112.RI.2.4  | Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze how an author uses and refines the meaning of a key term or terms over the course of a text (e.g., how Madison defines faction in <i>Federalist No. 10</i> ).   |  | 343809<br>343810<br>343811<br>343812   | Eng III A: Unit 2: Foundations of the American Dream<br>Video: Individualism Leads to Independence<br>Lesson: Thomas Jefferson<br>Lesson: Declaration of Independence – Timeline and Significance<br>Lesson: A Closer Examination of The Declaration of Independence<br>First semester<br>After watching a video that provides historical context, the students read about Thomas Jefferson and then do a close reading of the Declaration of Independence. They do a vocabulary study of unfamiliar words and key terms repeated by Jefferson.  | 117701                     | Eng III A: Unit 2 Activity: Declaration Vocabulary Journal and Declaration Close Reading Notes<br>First semester<br>As students read the Declaration, they fill out a Close Reading and Vocabulary Journal. They take comprehension and vocabulary notes, keeping track of which strategies they used for determining word meaning and main ideas. They cite specific textual evidence and support for each close reading response. This is a graded, formative assessment.   |
| LACC.1112.RI.2.5  | Analyze and evaluate the effectiveness of the structure an author uses in his or her exposition or argument, including whether the structure makes points clear, convincing, and engaging.  |  | 344013   | Eng III B: Unit 6: The Postmodern Dream<br>Lesson: César Chávez and "Commonwealth Club Address"<br>Second semester<br>As students read the speech by Cesar Chavez, they consider ways that the speeches of Chavez are similar to those of Dr. King. They find the main argument and look for supporting details. They notice rhetorical devices and imagery. They determine how the elements of the speech work together to engage the audience and convince.  | 117765                     | Eng III B: Unit 6 Assignment: King and Chávez<br>Students answer objective, multiple choice questions on a quiz that determines their understanding of different writings by King and Chávez.   |

|  |  |  |                  |  |        |  |
|--|--|--|------------------|--|--------|--|
| LACC.1112.RI.2.6                                     | Determine an author's point of view or purpose in a text in which the rhetoric is particularly effective, analyzing how style and content contribute to the power, persuasiveness or beauty of the text. |  | 344078           | Eng IV A: Unit 5: Poverty and Wealth<br>Lesson: Speech: "Every Man a King" by Huey Long<br>First semester<br>Students conduct a web quest for information before reading the speech. As students read the speech, they fill out a worksheet that leads students to a better understanding of the context in which the speech was given. Students establish the main ideas and the purpose of the speech, as well as political factors that shaped the speaker's point of view.   | 117787 | Eng IV A: Unit 5 Test: Poverty and Wealth<br>Students answer objective, multiple choice questions to demonstrate understanding of the unit's content.  |
| <b>Cluster 3: Integration of Knowledge and Ideas</b> |  |  |                  |  |        |  |
| LACC.1112.RI.3.7                                     | Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.   |  | 343952<br>343955 | Eng III B: Unit 4: Independent Research Project<br>Lesson: Independent Project Unit Portfolio: Beginning Your Research<br>Lesson: Reevaluating Your Research Topic Before Starting to Write<br>Second semester<br>The entire unit is a process for producing a research paper. In this lesson, students find information about their topic. They are directed to have at least two primary sources and four secondary sources of information: two or more books or articles found in a library and two or more internet sources. Students take notes on cards. Students then evaluate their information in order to find any weakness or gaps in their research. | 120222 | Eng IV B: Unit 1 Project: Freedom and Rights<br>Multimedia Project<br>Second semester<br>Students create a slideshow presentation synthesizing the theme of freedom and rights from text and media. In Lincoln's Second Inaugural Address and Elizabeth Cady Stanton's Address to Congress, students identify the themes and how they advance throughout the text. |

|                                |   |   |                  |   |                                      |  |
|--------------------------------|---|---|------------------|---|--------------------------------------|--|
| LACC.1112.L.2.3                | Apply knowledge of language to understand how language functions in different contexts, to make effective choices for meaning or style, and to comprehend more fully when reading or listening. |   |                  |   |                                      |  |
| LACC.1112.L.2.3.a              |   | Vary syntax for effect, consulting references (e.g., Tufte's Artful Sentences) for guidance as needed; apply an understanding of syntax to the study of complex texts when reading. | 343798<br>344082 | Throughout English III and IV, students demonstrate command of conventions. Each essay includes instruction on the basics of grammar and effective writing as well as 6+1 Traits rubrics. Students consult references as needed or instructed. Some examples are:<br><br>First semester<br>Eng IIIA: Unit 2: Foundations of the American Dream<br>Lesson: <i>Sinners in the Hands of an Angry God</i> and Puritan Beliefs Essay Instructions<br><br>First semester<br>Eng IVA: Unit 5: Poverty and Wealth<br>Lesson: Creating a Newspaper | 117697<br>117801                     | Throughout English III and IV students demonstrate command of conventions. Each essay includes a 6+1 Traits rubric which the student uses for self-evaluation and the teacher uses to provide feedback. Some essay examples include:<br><br>First semester<br>Eng IIIA: Unit 2 Paper: <i>Sinners in the Hands of an Angry God</i> and Puritan Beliefs Essay<br><br>First semester<br>Eng IVA: Unit 5 Project: Your Newspaper   |
| Vocabulary Acquisition and Use |   |   |                  |   |                                      |  |
| LACC.1112.L.3.4                | Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 11–12 reading and content, choosing flexibly from a range of strategies.                     |   |                  |   |                                      |  |
| LACC.1112.L.3.4.a              |   | Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.                | 343770<br>343774 | Eng III A: Unit 1: The American Dream<br>Lesson: Context Clues<br>Video: Reading: Context Clues<br>First semester<br>Students receive explicit instruction and gain practice in using different types of context clues to read for comprehension of difficult or unfamiliar words.  | 117684<br>117755<br>117764<br>117784 | Eng III A: Unit 1 Required Chat: "I Have a Dream"<br>Context Clues<br>First semester<br>Students explain in a paragraph how they used context clues in order to figure out the meanings of two difficult words in the first two paragraphs of "I Have a Dream" They discuss this with a teacher.<br><br>English IV A U2 Vocabulary Check: Using Context Clues I<br>English IV A U3 Vocabulary Check: Using Context Clues II<br>English IV A U4: Vocabulary Check: Using Context Clues III<br>First semester<br>Students take objective quizzes that check their skills in using context clues. |

|                   |   |   |                            |   |                            |   |
|-------------------|---|---|----------------------------|---|----------------------------|---|
| LACC.1112.L.3.4.b |   | Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., conceive, conception, conceivable).  | 344052                     | Eng IV A: Unit 4: War and Peace<br>Lesson: Translating Root Words Instructions<br>First semester<br>By adding different affixes to root words, students create new forms of words. Students keep their work on a worksheet.   | 117768                     | Eng IV A: Unit 3 Vocabulary Check: Greek and Latin Roots<br>Vocabulary Check: Translating Root Words<br>First semester<br>Students answer multiple choice questions to show understanding of Latin and Greek roots and words derivations.   |
| LACC.1112.L.3.4.c |   | Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, its etymology, or its standard usage. | 343812                     | Eng III A: Unit 2: Foundations of the American Dream<br>Lesson: A Closer Examination of the Declaration of Independence<br>First semester<br>As students complete their close reading assignment, they use different strategies to determine word meaning. Dictionary Reference is one of the methods used.   | 117701                     | Eng III A: Unit 2 Activity: Declaration Vocabulary Journal and Declaration Close Reading Notes<br>First semester<br>As students read the Declaration, they fill out a Close Reading and Vocabulary Journal. They take comprehension and vocabulary notes, keeping track of which strategies they used for determining word meaning and main ideas. They cite specific textual evidence and support for each close reading response. This is a graded, formative assessment. |
| LACC.1112.L.3.4.d |   | Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).   | 343984<br>344007<br>344047 | Eng IV A: Unit 2: Utopia and Dystopia<br>Lesson: Vocabulary: Using Context Clues I<br>Eng IV A U3: Order and Chaos<br>Lesson: Vocabulary: Using Context Clues II<br>Eng IV A U4: War and Peace<br>Lesson: Vocabulary: Using Context Clues III<br>First semester<br>After students guess the meaning of a word based on its context, they consult dictionary.com to verify the meaning of the word. Students fill out a worksheet as they work through the list and use it on the quiz | 117755<br>117764<br>117784 | Eng IV A: Unit 2 Vocabulary Check: Using Context Clues I<br>Eng IV A: Unit 3 Vocabulary Check: Using Context Clues II<br>Eng IV A: Unit 4: Vocabulary Check: Using Context Clues III<br>First semester<br>Students take multiple choice quizzes that check their skills in using context clues.   |
| LACC.1112.L.3.5   | Demonstrate understanding of figurative language, word relationships, and nuances in word meanings. |   |                            |   |                            |   |

|                   |   |  |                  |   |        |   |
|-------------------|---|--|------------------|---|--------|---|
| LACC.1112.L.3.5.a |   | Interpret figures of speech (e.g., satire, sarcasm) in context and analyze their role in the text. | 343865<br>343985 | Eng III A: Unit 5: Poetry in America<br>Lesson: Kant Get Enough of Figurative Language<br>First semester<br>Students watch a multi-media presentation to receive explicit instruction and review in the types and examples of figurative language.<br><br>Eng III B: Unit 5: The Modern American Dream<br>Lesson: Elements of Poetry<br>Second semester<br>Students review figurative language as one part of the lesson on the elements of poetry. | 117753 | Eng III B: Unit 5 Assignment: Elements of Poetry<br>Second semester<br>In a multiple choice assignment, students demonstrate understanding of figurative language, among other poetic elements                      |
| LACC.1112.L.3.5.b |   | Analyze nuances in the meaning of words with similar denotations.                                  | 344053           | Eng IV A: U4: War and Peace<br>Lesson: From a 'B' to an 'A'<br>First semester<br>In a lesson on improving the essay through revision, students receive explicit instruction about how to revise their word choice so that their words are stronger or more interesting. Particular attention is called to words that have similar denotations but different connotations.   | 117773 | Eng IV A: Unit 4 Test: War and Peace<br>First semester<br>In a multiple choice summative assessment, students analyze words and similar denotations.  |
| LACC.1112.L.3.6   | Acquire and use accurately general academic and domain-specific words and phrases, sufficient for reading, writing, speaking, and listening at the college and career readiness level; demonstrate independence in gathering vocabulary knowledge when considering a word or phrase important to comprehension or expression. |  |                  | English III and English IV<br>Through readings, text-based lessons and comprehension questions, students acquire new vocabulary. Each unit introduction provides key concepts and vocabulary for college readiness.   |        | English III and English IV<br>Through readings, text-based lessons and comprehension questions, students acquire new vocabulary. Each unit introduction provides key concepts and vocabulary for college readiness. |

## STANDARDS (21)

|                             |   |  |   |
|-----------------------------|---|--|---|
| <a href="#">MA.6.A.1.1:</a> | Explain and justify procedures for multiplying and dividing fractions and decimals. | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3: Operations with Fractions<br/>Lessons: Multiplication with Fractions and Division with Fraction<br/>Unit 4: Decimals<br/>Lessons: Multiplication of Decimals and Division of Decimals<br/><b>How the standard (benchmark) is taught:</b> This standard is taught through text based lessons with examples that explain and justify the procedures for multiplying and dividing fractions and decimals. The lessons include graphic representations of the processes that are used. The concepts are reinforced through interactive practice problems throughout the lessons.</p>   | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3 Assignment: Operations with Fractions 2; Students multiply fractions using standard procedures.<br/>Unit 3 Assignment: Operations with Fractions 3; Students divide fractions using standard procedures.<br/>Unit 4 Assignment: Decimals 3; Students multiply and divide decimals using standard procedures.</p>                            |
| <a href="#">MA.6.A.2.1:</a> | Use reasoning about multiplication and division to solve ratio and rate problems.   | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1: Ratio, Proportions, and Percent<br/>Lessons: Proportions, Rates, and Unit Cost<br/><b>How the standard (benchmark) is taught:</b> This standard is taught through texted based lessons that develop students' understanding of ratios and rates by connecting it to prior knowledge of multiplication and division. The lessons are supplemented with illustrations of the processes used to solve the ratio and rate problems. Interactive practice problems help students to gauge their understanding of the concepts.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1 Assignment: Ratio, Proportion, and Rates; Students solve ratio and rate problems using multiplication and division.<br/>Unit 1 Assignment: Unit Cost and Converting Fractions, Decimals and Percents; Students solve ratio and rate problems using multiplication and division.</p>   |
| <a href="#">MA.6.A.3.1:</a> | Write and evaluate mathematical expressions that correspond to given situations.    | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 6: Expressions and Equations<br/>Lesson: Simplifying Expressions and Writing Equations to Solve Problems<br/><b>How the standard (benchmark) is taught:</b> This standard is taught through a lesson that presents the processes for writing expressions to model situations. Students are then presented with a lesson that extends this knowledge to writing equations that model situations. Using prior knowledge, students then solve these equations. The processes are explained textually, as well as presented through tables and graphics. Students are presented with interactive practice problems throughout the lessons to ensure understanding of the material.</p>                                      | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 6 Assignment: Expressions and Equations 2; Students translate text into mathematical expressions<br/>Unit 6 Assignment: Expressions and Equations 3; Students translate text into mathematical expressions and evaluate them.</p>   |
| <a href="#">MA.6.A.5.1:</a> | Use equivalent forms of fractions, decimals, and percents to solve problems.        | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1: Ratio, Proportions, and Percent<br/>Lessons: Percents, Decimals, and Fractions, Percent Increase and Decrease Problems, and Using Percents<br/><b>How the standard (benchmark) is taught:</b> This standard is presented in a series of lessons that begins with an introduction to equivalent forms of fractions, decimals, and percents. Students are then taught how to use these three representations of numbers to solve various types of problems. Students are given text and visual examples, as well as mnemonic devices to solve these problems. After each new concept is presented, students have the opportunity to practice it through interactive practice problems that increase in difficulty.</p> | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1 Assignment: Unit Cost and Converting Fractions, Decimals and Percents; Students convert fractions, decimals and percents into equivalent forms and solve problems.<br/>Unit 1 Assignment: Percent Increase and Decrease and Using Percents; Students convert fractions, decimals and percents into equivalent forms and solve problems.</p> |
| <a href="#">MA.6.A.1.2:</a> | Multiply and divide fractions and decimals efficiently.                             | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3: Operations with Fractions<br/>Lessons: Multiplication with Fractions, Multiplication with Fractions in Word Problems, Division with Fractions, and Division of Fractions in Word Problems<br/>Unit 4: Decimals<br/>Lessons: Multiplications of Decimals, and Division of Decimals<br/><b>How the standard (benchmark) is taught:</b> This standard is taught through text based lessons with examples that explain and justify the procedures for multiplying and dividing fractions and decimals. The lessons include graphic representations of the processes that are used. The concepts are reinforced through interactive practice problems throughout the lessons.</p>   | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3 Assignment: Operations with Fractions 2; Student multiply fractions.<br/>Unit 3 Assignment: Operations with Fractions 3; Students divide fractions.<br/>Unit 4 Assignment: Decimals 3; Students multiply and divide decimals.</p>   |
| <a href="#">MA.6.A.2.2:</a> | Interpret and compare ratios and rates.   | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1: Ratio, Proportions, and Percent<br/>Lesson: Rates<br/><b>How the standard (benchmark) is taught:</b> This standard is taught by a text based lesson with examples presented in various ways: equations, diagrams, and tables are all used to show the equivalencies between rates and ratios. The concept is reinforced through interactive practice problems.</p>   | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1 Assignment: Ratio, Proportion, and Rates; Students compare, reduce and interpret ratios and rates.</p>  |

|             |   |  |  |
|-------------|---|--|--|
| MA.6.A.3.2: | Write, solve, and graph one- and two-step linear equations and inequalities.  | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 6: Expressions and Equations<br/>Lesson: Solving One Step Equations, and Writing Equations to Solve Problems<br/>MS Fundamentals of Math 6 B<br/>Unit 7: Functions and Inequalities<br/>Lessons: Inequalities, Graphing Inequalities, Solving Inequalities by Adding and Subtracting, Solving Inequalities by Multiplying and Dividing, Graphing Data on the Coordinate Plane, and Graphing Linear Equations and Functions</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught through three series of lessons. The first series teaches students how to write and solve one- and two-step equations. The next presents writing and solving one- and two-step inequalities. Finally, students are taught the processes for graphing linear equations. The lessons include text, graphical, and multimedia examples. Students are also presented with interactive practice problems over each concept.</p> | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1 Assignment: Ratio, Proportion, and Rates; Students compare, reduce and interpret ratios and rates.</p>   |
| MA.6.A.5.2: | Compare and order fractions, decimals, and percents, including finding their approximate location on a number line. | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 2: Number Patterns and Fractions<br/>Lesson: Comparing and Ordering Fractions<br/>Unit 4: Decimals<br/>Lesson: Comparing Decimals on a Number Line</p> <p><b>How the standard (benchmark) is taught:</b> This standard is presented through lessons that incorporate text, tables, and graphical representations of the different forms of numbers to compare them and graph them on a number line. Students are given opportunity to practice these concepts through interactive practice problems.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 2 Assignment: Number Patterns and Fractions 3; Students compare and order fractions including using a number line.<br/>Unit 4 Assignment: Decimals 2; Students compare and order decimals including using a number line.</p>   |
| MA.6.A.3.3: | Work backward with two-step function rules to undo expressions.   | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 7: Functions and Inequalities, Lesson: Functions</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught by connecting students understanding of a function rule that has already been given to solving for an unknown backwards. Content is presented textually and in a table.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 7 Assignment: Functions and Graphs<br/>Through a multiple choice question, students work backwards from a function rule.</p>   |
| MA.6.A.1.3: | Solve real-world problems involving multiplication and division of fractions and decimals.                          | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3: Operations with Fractions<br/>Lessons: Multiplication with Fractions in Word Problems, and Division of Fractions in Word Problems<br/>Unit 4: Decimals<br/>Lessons: Multiplications of Decimals, and Division of Decimals</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught through text based lessons that incorporate visual representations of the process of writing a word problem as a multiplication or division problem. Students are presented with interactive practice problems that allow them to practice each step of the process separately.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3 Assignment: Operations with Fractions 2; Students solve real-world problems involving multiplying fractions.<br/>Unit 3 Assignment: Operations with Fractions 3; Students solve real-world problems involving dividing fractions.<br/>Unit 4 Assignment: Decimals 3; Students solve real-world problems involving multiplying and dividing decimals.</p> |

|             |  |  |   |
|-------------|--|--|---|
| MA.6.A.5.3: | Estimate the results of computations with fractions, decimals, and percents, and judge the reasonableness of the results.                                      | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 4 Decimals<br/>Lesson: Addition and Subtraction of Decimals and Multiplication of Decimals</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught as a final step to working with decimals, in order to check the reasonableness of the solution. Students are reminded to use this step to ensure the accuracy of their computations.</p>   | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 4 Assignment: Decimals 2; Students use estimation to check the results of adding and subtracting decimal. They also check to see if the results are reasonable.<br/>Unit 4 Assignment: Decimals 3; Students use estimation to check the results of multiplying decimal. They also check to see if the results are reasonable.</p>             |
| MA.6.A.3.4: | Solve problems given a formula.  | <p><b>Where the standard (benchmark) is taught:</b><br/>This is taught throughout. For Ex:<br/>MS Fundamentals of Math 6 B<br/>Unit 1: Ratio, Proportion, and Percent<br/>Lessons: Rates, Percent Increase and Decrease and Using Percents<br/>Unit 2: Geometric Figures<br/>Lesson: Angles in Polygons<br/>Unit 3: Measurement<br/>Lesson: Finding Perimeter</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught throughout the course in various lessons. Most notably, students work with formulas in lessons on geometry. In these lessons, students work with many formulas, including formulas that they develop through inductive reasoning. Students are presented with examples and interactive practice problems to ensure understanding of the processes.</p> | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 1 Assignment: Ratio, Proportion, and Rate; Students use formulas for distance, rate and time to solve problems.<br/>Unit 2: Polygons; Students use the formula for number of angles to find the number of angles in a polygon.<br/>Unit 3 Assignment: Perimeter and Circumference; Students use the perimeter formula to find perimeters.</p> |
| MA.6.A.3.5: | Apply the Commutative, Associative, and Distributive Properties to show that two expressions are equivalent.   | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 6: Expressions and Equations<br/>Lesson: Properties</p> <p><b>How the standard (benchmark) is taught:</b> This is a text based lesson with examples. Examples are expressed both as equations and graphically, which allows students to see the changes being made to the equations. Students are presented with practice problems allowing them to identify and use the properties.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>Unit 6 Assignment: Expressions and Equations 2; Students identify and apply properties.</p>  |
| MA.6.A.3.6: | Construct and analyze tables, graphs, and equations to describe linear functions and other simple relations using both common language and algebraic notation. | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 7: Functions and Inequalities<br/>Lessons: Functions and Graphing Linear Equations and Functions</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught through a pair of lessons that integrate real life situations into the explanation of functions and their uses. Students are lead through how to create and analyze function tables, graphs, and equations, and how to move from one representation to another with step by step examples that include graphics to clarify the steps. Students then work through interactive practice problems.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 7 Assignment: Functions and Graphs; Students use table, equations and graphs to analyze functions.</p>  |

|             |  |  |  |
|-------------|--|--|--|
| MA.6.G.4.1: | Understand the concept of Pi, know common estimates of Pi (3.14; 22/7) and use these values to estimate and calculate the circumference and the area of circles.                       | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 3: Measurement<br/>Lesson: Circles and Circumference<br/>Unit 4: Area and Volume<br/>Lesson: Area of a Circle</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught in text based lessons with detailed illustrations of the concept of radius, diameter, and circumference of a circle. The lessons present the formulas for circumference and area of a circle, along with explaining pi and that it must be approximated, as it is irrational. Students use an approximation of pi to find the area and circumference of circles in interactive practice problems.</p> | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 A<br/>Unit 3 Assignment: Perimeter and Circumference; Students use common approximations for pi to find the circumference of a circle.<br/>Unit 4 Assignment: Circles and Surface Area; Students use common approximations for pi to find the area of a circle.</p> |
| MA.6.G.4.2: | Find the perimeters and areas of composite two dimensional figures, including non-rectangular figures (such as semicircles) using various strategies.                                  | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 4: Area and Volume<br/>Lesson: Area of Other Polygons<br/>Unit 3: Measurement<br/>Lesson: Finding Perimeter</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught through text-based lessons supplemented by formulas and illustrations. Students use both formulas and counting squares on a grid to determine the perimeter and area of composite figures. The lessons are completed with sets of interactive practice problems.</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 4 Assignment: Area of Polygons; Students find the area of composite figures.<br/>Unit 3 Assignment: Perimeter and Circumference; students find the perimeter of composite figures.</p>   |
| MA.6.G.4.3: | Determine a missing dimension of a plane figure or prism given its area or volume and some of the dimensions, or determine the area or volume given the dimensions.                    | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 4: Area and Volume<br/>Lessons: Area of Quadrilaterals, Area of Other Polygons, Area of a Circle, Surface Area of a Rectangular Prism, Volume of Rectangular Solids, Volume of Prisms and Cylinders</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught through text-based lessons supplemented by formulas and illustrations. Students use formulas determine the area and volume of plane figures and prisms. They also find missing dimensions for the area of a plane figure. The lessons are completed with sets of interactive practice problems.</p>             | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 4 Assignment: Area of Polygons<br/>Unit 4 Assignment: Circles and Surface Area<br/>Unit 4 Assignment: Volume</p>   |
| MA.6.S.6.1: | Determine the measures of central tendency (mean, median, mode) and variability (range) for a given set of data.   | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 5: Data and Statistics<br/>Lesson: Data and Range and Mean Median and Mode</p> <p><b>How the standard (benchmark) is taught:</b> This standard is presented in lessons that connect data to multiple representations. Students see data in lists, tables, frequency tables, and line plots. They compute the mean, median, mode, and range of various data sets.</p>  |  |
| MA.6.S.6.2: | Select and analyze the measures of central tendency or variability to represent, describe, analyze, and/or summarize a data set for the purposes of answering questions appropriately. | <p><b>Where the standard (benchmark) is taught:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 5: Data and Statistics<br/>Lessons: Data and Range, Mean, Median, and Mode, Displaying and Interpreting Data</p> <p><b>How the standard (benchmark) is taught:</b> This standard is taught through text-based lessons supplemented by illustrations. Students find the range, mean, median, and mode, and use this information to answer questions, including creating box-and-whisker plots</p>  | <p><b>How mastery of the standard (benchmark) is assessed:</b><br/>MS Fundamentals of Math 6 B<br/>Unit 5 Assignment: Samples, Population, and Data<br/>Unit 5 Assignment: Data Displays</p>   |

|   |  | <b>Extend the properties of exponents to rational exponents</b> |   |   |  |   |                            |                  |                  |  |
|   | MACC.912.N-RN.1.1  | MACC.912.N-RN.1.1   | Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. For example, we define $5^{1/3}$ to be the cube root of 5 because we want $(5^{1/3})^3 = 5^{(1/3) \cdot 3} = 5^1 = 5$ to hold, so $(5^{1/3})^3$ must equal 5 | Algebra IA<br>Unit 1: Variables and Expressions                   | Fractional Exponents Pg 1<br><br>This standard is taught through a text based lesson. Students learn by example that $25^{(1/2)}$ is the same thing as $\sqrt{25}$ . Students complete interactive practice problems to extend this knowledge.   | Unit 1 Assignment: Exponents and Roots<br>Unit 1 Test: Exponents and Roots<br><br>Using multiple choice questions, students will compute rational powers of numbers that have rational solutions.   | 344217                     |                  |                  |  |

|                    |  | MACC.912.N-VM.3.6  | (+) Use matrices to represent and manipulate data, e.g., to represent payoffs of incidence relationships in a network   |  |   |                 |      |                  |                  |
|                    |  | MACC.912.N-VM.3.7  | (+) Multiply matrices by scalars to produce new matrices, e.g., as when all of the payoffs in a game are doubled  |  |   |                 |      |                  |                  |
|                    |  | MACC.912.N-VM.3.8  | (+) Add, subtract, and multiply matrices of appropriate dimensions  |  |   |                 |      |                  |                  |
|                    |  | MACC.912.N-VM.3.9  | (+) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties  |  |   |                 |      |                  |                  |
|                    |  | MACC.912.N-VM.3.10   | (+) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse |  |   |                 |      |                  |                  |
|                    |  | MACC.912.N-VM.3.11   | (+) Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors   |  |   |                 |      |                  |                  |
|                    |  | MACC.912.N-VM.3.12   | (+) Work with $2 \times 2$ matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area   |  |   |                 |      |                  |                  |
| A.SSE              | <b>Seeing Structure in Expressions</b> |  |   |  |   |                 |      |                  |                  |
|                    | Cluster 1                              | <b>Interpret the structure of expression</b>   |   |  |   |                 |      |                  |                  |
|                    |  | MACC.912.A-SSE.1.1   | Interpret expressions that represent a quantity in terms of its context.  |  |   |                 |      |                  |                  |
| MACC.912.A-SSE.1.1 | MACC.912.A-SSE.1.1.a                   | Interpret parts of an expression, such as terms, factors, and coefficients   | Algebra IA<br>Unit 1: Variables and Expressions   | * Algebraic Expressions Pgs 2-4<br>In a text based lesson with an interactive practice activity and student practice questions, students learn that algebraic expressions are composed of terms, and that terms are composed of coefficients, variables, powers, and constants.  | * Unit 1 Assignment: Expressions                                      | 34187           |      |                  |                  |
|                    | MACC.912.A-SSE.1.1.b                   | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+in)$ as the product of $P$ and a factor not depending on $P$                   | Algebra IB<br>Unit 4: Exponents   | * Problem Solving: Compound Interest Pgs 2-4<br>In a multimedia with audio based lesson, students compute future values given the amount of the principal, interest rate, and number of compounding periods per year, following the order of operations. Students are presented with an alternate, text-based explanation of the standard. Students are then presented with text based examples and interactive practice problems to complete. | * Unit 4 Assignment: Compound Interest and Depreciation               | 347171          |      |                  |                  |
|                    | MACC.912.A-SSE.1.2                     | Use the structure of an expression to identify ways to rewrite it. For example, see $x^2 - y^2$ as $(x-y)(x+y)$ ; thus, recognizing it as a difference of squares that can be factored as $(x-y)(x+y)$ | Algebra IB<br>Unit 6: Polynomials and Factoring   | * Factoring Polynomials - Special Cases Pgs 2-5<br>In a teacher led video based lesson with printable interactive notes, students are shown how to identify and factor perfect square and difference of squares trinomials. Students are presented with an alternate, text-based explanation of the standard. The lesson continues with text-based examples with step by step solutions, and interactive practice problems.                    | * Unit 6 Assignment: Factoring Polynomials with GCF and Special Cases | 347410          |      |                  |                  |
|                    | Cluster 2                              | <b>Write expressions in equivalent forms to solve problems</b>   |   |  |   |                 |      |                  |                  |
|                    |  | MACC.912.A-SSE.2.3   | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.  |  |   |                 |      |                  |                  |

| State | Parent Standard ID  | Standard ID  | State Standard Description   | Course/Unit Name                                | Lesson Name  | Assessment Name  | RSID             | Bloom's Expected | Bloom's Achieved |
|-------|---|--|--|---|--|--|------------------|------------------|------------------|
|       | MACC.912.A-SSE.2.3  | MACC.912.A-SSE.2.3.a   | Factor a quadratic expression to reveal the zeros of the function it defines   |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-SSE.2.3.b   | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-SSE.2.3.c   | Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^t$ can be rewritten as $(1.15^{1/12})^{12t} = 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15% |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-SSE.2.4   | Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. For example, calculate mortgage payments.   |   |  |  |                  |                  |                  |
| A.APR | <b>Arithmetic with Polynomials and Rational Expressions</b> |  |  |   |  |  |                  |                  |                  |
|       | Cluster 1   | Perform arithmetic operations on polynomials                         |  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.1.1   | Understand that polynomials form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division, and multiply polynomials  | Algebra IB<br>Unit 6: Polynomials and Factoring | Adding and Subtracting Polynomials Pgs 2-5<br>Multiplying Polynomials Pgs 2-5<br><br>In text, graphics, and multimedia presentation based lessons, students learn the concept of closure of the set of polynomials under addition, subtraction, and multiplication by the fact that when arithmetic operations are performed on polynomials, the result is still a polynomial. Each lesson is accompanied by interactive printable notes and concludes with interactive practice problems. | Unit 6 Assignment: Polynomials and Adding and Subtracting Polynomials<br>Unit 6 Assignment: Multiplying Polynomials<br>Unit 6 Test: Polynomials and Factoring<br><br>Using multiple choice questions, students will perform operations on polynomials, getting polynomial solutions. | 347369<br>347368 |                  |                  |
|       | Cluster 2   | Understand the relationship between zeros and factors of polynomials |  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.2.2   | Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number $a$ , the remainder on division by $x - a$ is $p(a)$ , so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$   |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.2.3   | Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial   |   |  |  |                  |                  |                  |
|       | Cluster 3   | Use polynomial identities to solve problems                          |  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.3.4   | Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x^2 + y^2) = (x^2 - y^2) + (2xy)$ can be used to generate Pythagorean triples.  |   |  |  |                  |                  |                  |

| <b>S.MD Using Probability to Make Decisions</b> |                    |  |   |                  |             |                 |      |                  |                  |  |  |
|   | Cluster 1          | Calculate expected values and use them to solve problems |   |                  |             |                 |      |                  |                  |  |  |
|   |                    | MACC.912.S-MD.1.1  | (+) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions  |                  |             |                 |      |                  |                  |  |  |
|   |                    | MACC.912.S-MD.1.2  | (+) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution   |                  |             |                 |      |                  |                  |  |  |
|   |                    | MACC.912.S-MD.1.3  | (+) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes. |                  |             |                 |      |                  |                  |  |  |
|   |                    | MACC.912.S-MD.1.4  | (+) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?                      |                  |             |                 |      |                  |                  |  |  |
|   | Cluster 2          | Use probability to evaluate outcomes of decisions        |   |                  |             |                 |      |                  |                  |  |  |
|   |                    | MACC.912.S-MD.2.5  | (+) Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values   |                  |             |                 |      |                  |                  |  |  |

| State                                      | Parent Standard ID | Standard ID   | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|--|--------------------|---|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|  | MACC.912.S-MD.2.5  | MACC.912.S-MD.2.5.a                                   | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant.   |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.912.S-MD.2.5.b                                   | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.   |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.912.S-MD.2.6                                     | (+) Use probabilities to make fair decisions (e.g., drawing lots, using a random number generator)  |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.912.S-MD.2.7                                     | (+) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).   |                  |             |                 |      |                  |                  |  |  |
| <b>A.SSE Domain: MATHEMATICAL PRACTICE</b> |                    |   |   |                  |             |                 |      |                  |                  |  |  |
|  | Cluster 1          | Make sense of problems and persevere in solving them. |   |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.K12.MP.1.1                                       | Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. |                  |             |                 |      |                  |                  |  |  |
|  | Cluster 2          | Reason abstractly and quantitatively.                 |   |                  |             |                 |      |                  |                  |  |  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.2.1   | Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand, considering the units involved, attending to the meaning of quantities, not just how to compute them; and |                  |             |                 |      |                  |                  |
|       | Cluster 3          | <b>Construct viable arguments and critique the reasoning of others.</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.3.1   | Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or                     |                  |             |                 |      |                  |                  |
|       | Cluster 4          | <b>Model with mathematics.</b>  |  |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID                                 | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.4.1                             | Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their |                  |             |                 |      |                  |                  |
|       | Cluster 5          | <b>Use appropriate tools strategically.</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.5.1                             | Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When                      |                  |             |                 |      |                  |                  |
|       | Cluster 6          | <b>Attend to precision.</b>                 |  |                  |             |                 |      |                  |                  |

|-------|--------------------|--|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.6.1  | Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.  |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 7          | Look for and make use of structure.                    |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.7.1  | Look for and make use of structure. Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$ , older students can see the 14 as $2 \times 7$ and the 9 as $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 8          | Look for and express regularity in repeated reasoning. |   |                  |             |                 |      |                  |                  |  |  |

| State | Parent Standard ID | Standard ID     | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|-----------------|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.8.1 | Look for and express regularity in repeated reasoning. Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$ , $(x - 1)(x^2 + x + 1)$ , and $(x - 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain |                  |             |                 |      |                  |                  |  |  |

|--------------------|--|--|---|---|--|---|--------|------------------|------------------|
|                    | Cluster 3                              | <b>Perform operations on matrices and use matrices in applications</b>   |   |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.6  | (+) Use matrices to represent and manipulate data, e.g., to represent payoffs of incidence relationships in a category  |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.7  | (+) Multiply matrices by scalars to produce new matrices, e.g., as when all of the payoffs in a game are doubled  |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.8  | (+) Add, subtract, and multiply matrices of appropriate dimensions  |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.9  | (+) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties  |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.10   | (+) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.11   | (+) Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors   |   |  |   |        |                  |                  |
|                    |  | MACC.912.N-VM.3.12   | (+) Work with $2 \times 2$ matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area   |   |  |   |        |                  |                  |
| A.SSE              | <b>Seeing Structure in Expressions</b> |  |   |   |  |   |        |                  |                  |
|                    | Cluster 1                              | <b>Interpret the structure of expression</b>   |   |   |  |   |        |                  |                  |
|                    |  | MACC.912.A-SSE.1.1   | Interpret expressions that represent a quantity in terms of its context.  |   |  |   |        |                  |                  |
| MACC.912.A-SSE.1.1 | MACC.912.A-SSE.1.1.a                   | Interpret parts of an expression, such as terms, factors, and coefficients   | Algebra IA<br>Unit 1: Variables and Expressions   | Algebraic Expressions Pgs 2-4                 | In a text based lesson with an interactive practice activity and student practice questions, students learn that algebraic expressions are composed of terms, and that terms are composed of coefficients, variables, powers, and constants.   | Unit 1 Assignment: Expressions                                      | 344187 |                  |                  |
|                    | MACC.912.A-SSE.1.1.b                   | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+in)$ as the product of $P$ and a factor not depending on $P$                   | Algebra IB<br>Unit 4: Exponents   | Problem Solving: Compound Interest Pgs 2-4    | In a multimedia with audio based lesson, students compute future values given the amount of the principal, interest rate, and number of compounding periods per year, following the order of operations. Students are presented with an alternate, text-based explanation of the standard. Students are then presented with text based examples and interactive practice problems to complete. | Unit 4 Assignment: Compound Interest and Depreciation               | 347171 |                  |                  |
|                    | MACC.912.A-SSE.1.2                     | Use the structure of an expression to identify ways to rewrite it. For example, see $x^2 - y^2$ as $(x-y)(x+y)$ ; thus, recognizing it as a difference of squares that can be factored as $(x-y)(x+y)$ | Algebra IB<br>Unit 6: Polynomials and Factoring   | Factoring Polynomials - Special Cases Pgs 2-5 | In a teacher led video based lesson with printable interactive notes, students are shown how to identify and factor perfect square and difference of squares trinomials. Students are presented with an alternate, text-based explanation of the standard. The lesson continues with text-based examples with step by step solutions, and interactive practice problems.                       | Unit 6 Assignment: Factoring Polynomials with GCF and Special Cases | 347410 |                  |                  |
|                    | Cluster 2                              | <b>Write expressions in equivalent forms to solve problems</b>   |   |   |  |   |        |                  |                  |
|                    |  | MACC.912.A-SSE.2.3   | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.  |   |  |   |        |                  |                  |

| State | Parent Standard ID  | Standard ID  | State Standard Description   | Course/Unit Name                                | Lesson Name  | Assessment Name  | RSID             | Bloom's Expected | Bloom's Achieved |
|-------|---|--|--|---|--|--|------------------|------------------|------------------|
|       | MACC.912.A-SSE.2.3  | MACC.912.A-SSE.2.3.a   | Factor a quadratic expression to reveal the zeros of the function it defines   |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-SSE.2.3.b   | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-SSE.2.3.c   | Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^t$ can be rewritten as $(1.15^{1/12})^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15% |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-SSE.2.4   | Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. For example, calculate mortgage payments.   |   |  |  |                  |                  |                  |
| A.APR | <b>Arithmetic with Polynomials and Rational Expressions</b> |  |  |   |  |  |                  |                  |                  |
|       | Cluster 1   | Perform arithmetic operations on polynomials                         |  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.1.1   | Understand that polynomials form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division, and multiply polynomials  | Algebra IB<br>Unit 6: Polynomials and Factoring | Adding and Subtracting Polynomials Pgs 2-5<br>Multiplying Polynomials Pgs 2-5<br><br>In text, graphics, and multimedia presentation based lessons, students learn the concept of closure of the set of polynomials under addition, subtraction, and multiplication by the fact that when arithmetic operations are performed on polynomials, the result is still a polynomial. Each lesson is accompanied by interactive printable notes and concludes with interactive practice problems. | Unit 6 Assignment: Polynomials and Adding and Subtracting Polynomials<br>Unit 6 Assignment: Multiplying Polynomials<br>Unit 6 Test: Polynomials and Factoring<br><br>Using multiple choice questions, students will perform operations on polynomials, getting polynomial solutions. | 347369<br>347368 |                  |                  |
|       | Cluster 2   | Understand the relationship between zeros and factors of polynomials |  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.2.2   | Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number $a$ , the remainder on division by $x - a$ is $p(a)$ , so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$   |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.2.3   | Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial   |   |  |  |                  |                  |                  |
|       | Cluster 3   | Use polynomial identities to solve problems                          |  |   |  |  |                  |                  |                  |
|       |   | MACC.912.A-APR.3.4   | Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x^2 + y^2) = (x^2 - y^2) + (2xy)$ can be used to generate Pythagorean triples.  |   |  |  |                  |                  |                  |

|       |                    | MACC.912.A-REI.4.11  | Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions. | Algebra IB<br>Unit 3: Systems of Equations  | Solving Systems of Linear Equations by Graphing Pg 3<br>Solving Linear Systems by Substitution Pg 2<br><br>Through text based lessons with teacher led videos and printable, interactive notes, students will solve systems of equations by graphing and by substitution. Each lesson also includes a text-based supplemental lesson, as well as worked out example problems and interactive practice.  | Unit 3 Assignment: Solving Systems of Equations by Substitution and Elimination<br>Unit 3 Test: Systems of Equations   | 346987<br>346999 |                  |                  |
|       |                    | MACC.912.A-REI.4.12  | Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes  | Algebra IA<br>Unit 5: Inequalities<br><br>Algebra B<br>Unit 3: Systems of Equations | Graphing Inequalities in Two Variables Pg 1<br>Graphing Linear Systems of Inequalities Pgs 2-5<br><br>This standard is taught through lessons that include text, video, multimedia presentations, and supplemental instruction. Student learn to graph linear inequalities, including both inclusive and exclusive of the boundary line. Students will then solve a system of linear inequalities. Students complete interactive practice problems. | Unit 5 Assignment: Inequalities in Two Variables<br>Unit 5 Test: Inequalities<br>Using multiple choice questions, students demonstrate mastery of graphing linear inequalities.<br><br>Unit 3 Assignment: Graphing Linear Systems of Inequalities<br>Unit 3 Test: Systems of Equations<br><br>Using multiple choice questions, students choose a correct graph displaying a correctly graphed system of linear inequalities. | 346194<br>347020 |                  |                  |
| F.JF  |                    | <b>Interpreting functions</b>  |   |   |   |  |                  |                  |                  |
|       | Cluster 1          | Understand the concept of a function and use function notation         |   |   |   |  |                  |                  |                  |
|       |                    | MACC.912.F-IF.1.1  | Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$ . The graph of $f$ is the graph of the equation $y = f(x)$ .   | Algebra IA<br>Unit 4: Function and Linear Equations                                 | Functions Pg 1<br><br>In a text and multimedia based lesson with teacher audio, students will define functions, find the domain and range relate, and graph the functions. Students will complete interactive practice problems.  | Unit 4 Assignment: Relations, Functions, and Replacement Sets<br>Unit 4 Test: Functions and Linear Equations<br><br>Using multiple choice questions, students will demonstrate a basic understanding of functions.   | 344355           |                  |                  |
|       |                    | MACC.912.F-IF.1.2  | Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context  | Algebra IA<br>Unit 4: Function and Linear Equations                                 | Functions Pg 1<br><br>In a text and multimedia based lesson, students will evaluate functions by understanding that $f(x)$ essentially replaces $y$ in terms of graphing the function.  | Unit 4 Assignment: Relations, Functions, and Replacement Sets<br>Unit 4 Test: Functions and Linear Equations<br><br>Using multiple choice questions, students will find function values.   | 344355           |                  |                  |
|       |                    | MACC.912.F-IF.1.3  | Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1$ , $f(n+1) = f(n) + f(n-1)$ for $n \geq 1$ .  |   |   |  |                  |                  |                  |
|       | Cluster 2          | Interpret functions that arise in applications in terms of the context |   |   |   |  |                  |                  |                  |

| State | Parent Standard ID | Standard ID                                       | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.912.F-IF.2.4                                 | For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity. |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.2.5                                 | Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function $h(n)$ gives the number of person-hours it takes to assemble $n$ engines in a factory, then the positive integers would be an appropriate domain for the function.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.2.6                                 | Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.   |                  |             |                 |      |                  |                  |

|  | MACC.912.S-MD.2.5  | MACC.912.S-MD.2.5.a                                   | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant.   |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.912.S-MD.2.5.b                                   | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.   |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.912.S-MD.2.6                                     | (+) Use probabilities to make fair decisions (e.g., drawing lots, using a random number generator)  |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.912.S-MD.2.7                                     | (+) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).   |                  |             |                 |      |                  |                  |  |  |
| <b>A.SSE Domain: MATHEMATICAL PRACTICE</b> |                    |   |   |                  |             |                 |      |                  |                  |  |  |
|  | Cluster 1          | Make sense of problems and persevere in solving them. |   |                  |             |                 |      |                  |                  |  |  |
|  |                    | MACC.K12.MP.1.1                                       | Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. |                  |             |                 |      |                  |                  |  |  |
|  | Cluster 2          | Reason abstractly and quantitatively.                 |   |                  |             |                 |      |                  |                  |  |  |

|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.2.1   | Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand, considering the units involved, attending to the meaning of quantities, not just how to compute them; and |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 3          | <b>Construct viable arguments and critique the reasoning of others.</b> |  |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.3.1   | Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or                     |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 4          | <b>Model with mathematics.</b>  |  |                  |             |                 |      |                  |                  |  |  |

| State | Parent Standard ID | Standard ID                                 | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.4.1                             | Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 5          | <b>Use appropriate tools strategically.</b> |  |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.5.1                             | Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When                      |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 6          | <b>Attend to precision.</b>                 |  |                  |             |                 |      |                  |                  |  |  |

| State | Parent Standard ID | Standard ID  | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|--|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.6.1  | Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.  |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 7          | Look for and make use of structure.                    |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.7.1  | Look for and make use of structure. Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$ , older students can see the 14 as $2 \times 7$ and the 9 as $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 8          | Look for and express regularity in repeated reasoning. |   |                  |             |                 |      |                  |                  |  |  |

|       |                    | MACC.K12.MP.8.1 | Look for and express regularity in repeated reasoning. Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$ , $(x - 1)(x^2 + x + 1)$ , and $(x - 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain |                  |             |                 |      |                  |                  |  |  |

| CCMA  | N.RN               | <b>The Real Number Systems</b>   |  |                  |             |                 |      |                  |                  |  |
|   | Cluster 1          | <b>Extend the properties of exponents to rational exponents</b>            |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-RN.1.1  | Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. For example, we define $5^{1/3}$ to be the cube root of 5 because we want $(5^{1/3})^3 = 5^{(1/3) \cdot 3} = 5^1$ to hold, so $(5^{1/3})^3$ must equal 5. |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-RN.1.2  | Rewrite expressions involving radicals and rational exponents using the properties of exponents.   |                  |             |                 |      |                  |                  |  |
|   | Cluster 2          | <b>Use properties of rational and irrational numbers.</b>                  |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-RN.2.3  | Explain why the sum or product of two rational numbers is rational; that the sum of a rational number and an irrational number is irrational; and that the product of a nonzero rational number and an irrational number is irrational.  |                  |             |                 |      |                  |                  |  |
|   | N.Q                | <b>Quantities</b>  |  |                  |             |                 |      |                  |                  |  |
|   | Cluster 1          | <b>Reason quantitatively and use units to solve problems</b>               |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-Q.1.1   | Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scales and the origin in graphs and data displays.   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-Q.1.2   | Define appropriate quantities for the purpose of descriptive modeling.   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-Q.1.3   | Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.  |                  |             |                 |      |                  |                  |  |
|   | N.CN               | <b>The Complex Number Systems</b>  |  |                  |             |                 |      |                  |                  |  |
|   | Cluster 1          | <b>Perform arithmetic operations with complex numbers</b>                  |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.1.1  | Know there is a complex number $i$ such that $i^2 = -1$ , and every complex number has the form $a + bi$ with $a$ and $b$ real.  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.1.2  | Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.1.3  | (+) Find the conjugate of a complex number; use conjugates to find moduli and quotients of complex numbers.  |                  |             |                 |      |                  |                  |  |
|   | Cluster 2          | <b>Represent complex numbers and their operations on the complex plane</b> |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.2.4  | (+) Represent complex numbers on the complex plane in rectangular and polar form (including real and imaginary numbers), and explain why the rectangular and polar forms of a given complex number represent the same number.  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.2.5  | (+) Represent addition, subtraction, multiplication, and conjugation of complex numbers geometrically on the complex plane; use properties of this representation for computation. For example, $(-1 + i\sqrt{3})^2 = 8$ because $(-1 + i\sqrt{3})$ has modulus 2 and argument $120^\circ$ .   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.2.6  | (+) Calculate the distance between numbers in the complex plane as the modulus of the difference, and the midpoint of a segment as the average of the numbers as its endpoints.  |                  |             |                 |      |                  |                  |  |
|   | Cluster 3          | <b>Use complex numbers in polynomial identities and equations</b>          |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.3.7  | Solve quadratic equations with real coefficients that have complex solutions.  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.3.8  | (+) Extend polynomial identities to the complex numbers. For example, rewrite $x^2 + 4$ as $(x + 2i)(x - 2i)$ .  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-CN.3.9  | (+) Know the Fundamental Theorem of Algebra, show that it is true for quadratic polynomials.   |                  |             |                 |      |                  |                  |  |
|   | N.V                | <b>Vector and Matrix Quantities</b>  |  |                  |             |                 |      |                  |                  |  |
|   | Cluster 1          | <b>Represent and Model with Vector Quantities</b>                          |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.1.1  | (+) Recognize vector quantities as having both magnitude and direction. Represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes (e.g., $v$ , $ v $ , $\ v\ $ , $\ v\ $ ).  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.1.2  | (+) Find the components of a vector by subtracting the coordinates of an initial point from the coordinates of a terminal point.   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.1.3  | (+) Solve problems involving velocity and other quantities that can be represented by vector.  |                  |             |                 |      |                  |                  |  |
|   | Cluster 2          | <b>Perform Operations on Vectors</b>                                       |  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.2.4  | (+) Add and subtract vectors.  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.2.4.a  | Add vectors end-to-end, component-wise, and by the parallelogram rule. Understand that the magnitude of a sum of two vectors is typically not the sum of the magnitudes.   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.2.4.b  | Given two vectors in magnitude and direction form, determine the magnitude and direction of their sum.   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.2.4.c  | Understand vector subtraction $w - v$ as $w + (-v)$ , where $-v$ is the additive inverse of $v$ , with the same magnitude as $v$ and pointing in the opposite direction. Represent vector subtraction graphically by connecting the tips in the appropriate order, and perform vector subtraction component-wise.  |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.2.5  | (+) Multiply a vector by a scalar.   |                  |             |                 |      |                  |                  |  |
|   |                    | MACC.912.N-VM.2.5.a  | Represent scalar multiplication graphically by scaling vectors and possibly reversing their direction; perform scalar multiplication component-wise, e.g., as $(cv_x, cv_y) = (cv_x, cv_y)$ .  |                  |             |                 |      |                  |                  |  |

|-------|--------------------|---|---|------------------|-------------|-----------------|------|------------------|------------------|--|
|       |                    | MACC.912.N-VM.2.5.b   | Compute the magnitude of a scalar multiple $cv$ using $ cv  =  c v $ . Compute the direction of $cv$ knowing that when $ c  > 0$ , the direction of $cv$ is either along $v$ (for $c > 0$ ) or against $v$ (for $c < 0$ ).  |                  |             |                 |      |                  |                  |  |
|       | Cluster 3          | <b>Perform operations on matrices and use matrices in applications</b>      |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.6   | (+) Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.7   | (+) Multiply matrices by scalars to produce new matrices, e.g., as when all of the sports in a game are doubled.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.8   | (+) Add, subtract, and multiply matrices of appropriate dimensions.   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.9   | (+) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties.   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.10  | (+) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.11  | (+) Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.N-VM.3.12  | (+) Work with $2 \times 2$ matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area.  |                  |             |                 |      |                  |                  |  |
|       | A.SSE              | <b>Seeing Structure in Expressions</b>                                      |   |                  |             |                 |      |                  |                  |  |
|       | Cluster 1          | <b>Interpret the structure of expression</b>                                |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.1.1  | Interpret expressions that represent a quantity in terms of its context.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.1.1.a  | Interpret parts of an expression, such as terms, factors, and coefficients.   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.1.1.b  | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+r)^n$ as the product of $P$ and a factor not depending on $P$ .   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.1.2  | Use the structure of an expression to identify ways to rewrite it. For example, see $x^2 - y^2$ as $(x+y)(x-y)$ , thus recognizing it as a difference of squares that can be factored as $(x+y)(x-y)$ .   |                  |             |                 |      |                  |                  |  |
|       | Cluster 2          | <b>Write expressions in equivalent forms to solve problems</b>              |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.2.3  | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.2.3.a  | Factor a quadratic expression to reveal the zeros of the function it defines.   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.2.3.b  | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.2.3.c  | Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^n$ can be rewritten as $(1.15^{1/n})^{n \cdot 1}$ , so to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-SSE.2.4  | Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. For example, calculate mortgage payments.  |                  |             |                 |      |                  |                  |  |
|       | A.APR              | <b>Arithmetic with Polynomials and Rational Expressions</b>                 |   |                  |             |                 |      |                  |                  |  |
|       | Cluster 1          | <b>Perform arithmetic operations on polynomials</b>                         |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.1.1  | Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.  |                  |             |                 |      |                  |                  |  |
|       | Cluster 2          | <b>Understand the relationship between zeros and factors of polynomials</b> |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.2.2  | Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number $a$ , the remainder on division by $x - a$ is $p(a)$ , so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$ .  |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.2.3  | Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial.   |                  |             |                 |      |                  |                  |  |
|       | Cluster 3          | <b>Use polynomial identities to solve problems</b>                          |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.3.4  | Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ can be used to generate Pythagorean triples.   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.3.5  | (+) Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of $x$ and $y$ for a positive integer $n$ , where $x$ and $y$ are any numbers, with coefficients determined for example by Pascal's Triangle.  |                  |             |                 |      |                  |                  |  |
|       | Cluster 4          | <b>Rewrite rational expressions</b>   |   |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.4.6  | Rewrite simple rational expressions in different forms; write $a(x)/b(x)$ in the form $q(x) + r(x)/b(x)$ , where $q(x)$ , $r(x)$ , and $b(x)$ are polynomials with the degree of $r(x)$ less than the degree of $b(x)$ , using inspection, long division, or, for the more complicated examples, a computer algebra system. |                  |             |                 |      |                  |                  |  |
|       |                    | MACC.912.A-APR.4.7  | (+) Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.  |                  |             |                 |      |                  |                  |  |
|       | A.CED              | <b>Creating Equations</b>   |   |                  |             |                 |      |                  |                  |  |
|       | Cluster 1          | <b>Create equations that describe numbers or relationships</b>              |   |                  |             |                 |      |                  |                  |  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name                            | Lesson Name | Assessment Name  | RSID   | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|---|-------------|--|--------|------------------|------------------|
|       |                    | MACC.912.A-CED.1.1  | Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-CED.1.2  | Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-CED.1.3  | Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or nonviable options in a modeling context. For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.   |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-CED.1.4  | Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. For example, rearrange Ohm's law $V = IR$ to highlight resistance $R$ .  |   |             |  |        |                  |                  |
| A.REI |                    | <b>Reasoning with Equations and Inequalities</b>                          |  |   |             |  |        |                  |                  |
|       | Cluster 1          | <b>Understand solving equations as a process of reasoning and explain</b> |  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.1.1  | Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.  | Geometry A<br>Unit 2: Reasoning in Geometry | Proof       | <ul style="list-style-type: none"> <li>Unit 2 Activity: Algebraic Proofs</li> <li>Unit 2 Test: Proof</li> </ul> Using free response worksheet problems and multiple choice questions, students show that they understand the rationale behind solving first order algebraic equations. | 344774 |                  |                  |
|       |                    | MACC.912.A-REI.1.2  | Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.   |   |             |  |        |                  |                  |
|       | Cluster 2          | <b>Solve equations and inequalities in one variable</b>                   |  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.2.3  | Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.   |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.2.4  | Solve quadratic equations in one variable.   |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.2.4.a  | Use the method of completing the square to transform any quadratic equation in $x$ into an equation of the form $(x - p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form.  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.2.4.b  | Solve quadratic equations by inspection (e.g., for $x^2 = 49$ ), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a + bi$ for real numbers $a$ and $b$ .   |   |             |  |        |                  |                  |
|       | Cluster 3          | <b>Solve systems of equations</b>   |  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.3.5  | Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.3.6  | Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.   |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.3.7  | Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$ .  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.3.8  | Represent a system of linear equations as a single matrix equation in a vector variable.   |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.3.9  | (+) Find the inverse of a matrix if it exists and use it to solve systems of linear equations (using technology for matrices of dimension $3 \times 3$ or greater).  |   |             |  |        |                  |                  |
|       | Cluster 4          | <b>Represent and solve equations and inequalities graphically</b>         |  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.4.10   | Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).  |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.4.11   | Explain why the $x$ -coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions. |   |             |  |        |                  |                  |
|       |                    | MACC.912.A-REI.4.12   | Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.  |   |             |  |        |                  |                  |
| F.IF  |                    | <b>Interpreting functions</b>   |  |   |             |  |        |                  |                  |
|       | Cluster 1          | <b>Understand the concept of a function and use function notation</b>     |  |   |             |  |        |                  |                  |
|       |                    | MACC.912.F-IF.1.1   | Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$ . The graph of $f$ is the graph of the equation $y = f(x)$ .  |   |             |  |        |                  |                  |
|       |                    | MACC.912.F-IF.1.2   | Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.  |   |             |  |        |                  |                  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name                                     | Lesson Name   | Assessment Name  | RSID   | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|--|---|--|--|------------------|------------------|
|       |                    | MACC.912.F-IF.1.3   | Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1$ , $f(n+1) = f(n) + f(n-1)$ for $n \geq 1$ .   |  |   |  |  |                  |                  |
|       | Cluster 2          | <b>Interpret functions that arise in applications in terms of the context</b> |  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.2.4   | For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity. |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.2.5   | Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function $h(t)$ gives the number of person-hours it takes to assemble $n$ engines in a factory, then the positive integers would be an appropriate domain for the function.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.2.6   | Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.   | Geometry A<br>Unit 3: Lines and the Coordinate Plane | Slope of a Line Pgs 1-2<br>Problem Solving Using Slope Pgs 1-2<br>Slope-Intercept Form Pgs 1-4<br>Point-Slope Form Pg 2 (1 example)<br>Solving Problems Using Linear Graphs Pgs 1-2 | <ul style="list-style-type: none"> <li>Unit 3 Assignment: Slope</li> <li>Unit 3 assignment: Graphing Linear Equations</li> <li>Unit 3 Test: Lines and the Coordinate Plane</li> </ul> Through text based lessons with examples and interactive practice problems, students will identify slope as the measure of rate of change of a graph over a specific interval and calculate that rate of change. | 349077<br>344939<br>344842<br>344843<br>344847 |                  |                  |
|       | Cluster 3          | <b>Analyze functions using different representations</b>                      |  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7   | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.a   | Graph linear and quadratic functions and show intercepts, maxima, and minima.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.b   | Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.c   | Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.d   | (+) Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.e   | Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.8   | Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.8.a   | Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.8.b   | Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as $y = (1.02)^t$ , $y = (0.97)^t$ , $y = (1.01)^{5t}$ , $y = (1.2)^{\frac{t}{3}}$ , and classify them as representing exponential growth or decay.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-IF.3.9   | Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.  |  |   |  |  |                  |                  |
| F.BF  |                    | <b>Building Functions</b>   |  |  |   |  |  |                  |                  |
|       | Cluster 1          | <b>Build a function that models a relationship between two quantities</b>     |  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.1.1   | Write a function that describes a relationship between two quantities.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.1.1.a   | Determine an explicit expression, a recursive process, or steps for calculation from a context.  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.1.1.b   | Combine standard function types using arithmetic operations. For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.1.1.c   | (+) Compose functions. For example, if $T(t)$ is the temperature in the atmosphere as a function of height, and $h(t)$ is the height of a weather balloon as a function of time, then $T(h(t))$ is the temperature at the location of the weather balloon as a function of time.   |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.1.2   | Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.   |  |   |  |  |                  |                  |
|       | Cluster 2          | <b>Build new functions from existing functions</b>                            |  |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.2.3   | Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$ , $k f(x)$ , $f(kx)$ , and $f(x + k)$ for specific values of $k$ (both positive and negative); find the value of $k$ given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. Include recognizing even and odd functions from their graphs and algebraic expressions for them.                 |  |   |  |  |                  |                  |
|       |                    | MACC.912.F-BF.2.4   | Find inverse functions.  |  |   |  |  |                  |                  |

| State       | Parent Standard ID                               | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------------|--|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|             | MACC.912.F-BF.2.4                                | MACC.912.F-BF.2.4.a   | Solve an equation of the form $k(x) = c$ for a simple function $f$ that has an inverse and write an expression for the inverse. For example, $f(x) = 2x^3$ or $f(x) = (x+1)(x-1)$ for $x \neq 1$   |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-BF.2.4.b   | (+) Verify by composition that one function is the inverse of another  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-BF.2.4.c   | (+) Read values of an inverse function from a graph or a table, given that the function has an inverse   |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-BF.2.4.d   | (+) Produce an invertible function from a non-invertible function by restricting the domain  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-BF.2.5   | (+) Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponent   |                  |             |                 |      |                  |                  |
| <b>F.LE</b> | <b>Linear, Quadratic, and Exponential Models</b> |   |  |                  |             |                 |      |                  |                  |
|             | Cluster 1  | <b>Construct and compare linear, quadratic, and exponential models</b>          |  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.1.1   | Distinguish between situations that can be modeled with linear functions and with exponential functions  |                  |             |                 |      |                  |                  |
|             | MACC.912.F-LE.1.1                                | MACC.912.F-LE.1.1.a   | Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.1.1.b   | Recognize situations in which one quantity changes at a constant rate per unit interval relative to another  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.1.1.c   | Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.1.2   | Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table)   |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.1.3   | Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.1.4   | For exponential models, express as a logarithm the solution to $ab^{ct} = d$ where $a$ , $c$ , and $d$ are numbers and the base $b$ is 2, 10, or $e$ ; evaluate the logarithm using technology   |                  |             |                 |      |                  |                  |
|             | Cluster 2  | <b>Interpret expressions for functions in terms of the situation they model</b> |  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-LE.2.5   | Interpret the parameters in a linear or exponential function in terms of a context   |                  |             |                 |      |                  |                  |
| <b>F.TF</b> | <b>Trigonometric Functions</b>                   |   |  |                  |             |                 |      |                  |                  |
|             | Cluster 1  | <b>Extend the domain of trigonometric functions using the unit circle</b>       |  |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-TF.1.1   | Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle   |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-TF.1.2   | Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle   |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-TF.1.3   | (+) Use special triangles to determine geometrically the values of sine, cosine, tangent for $\pi/2$ , $\pi/4$ and $\pi/6$ , and use the unit circle to express the values of sine, cosine, and tangent for $\pi-x$ , $\pi+x$ , and $2\pi-x$ in terms of their values for $x$ , where $x$ is any real number |                  |             |                 |      |                  |                  |
|             |  | MACC.912.F-TF.1.4   | (+) Use the unit circle to explain symmetry (odd and even) and periodicity of trigonometric functions  |                  |             |                 |      |                  |                  |
|             | Cluster 2  | <b>Model periodic phenomena with trigonometric functions</b>                    |  |                  |             |                 |      |                  |                  |

|           |  | MACC.912.G-MG.1.1   | Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).   | Geometry A<br>Unit 5: Quadrilaterals and Polygons<br><br>Geometry B<br>Unit 4: Surface Area and Volume | Regular vs. Irregular Polygons Pg 1<br><br>Spheres Pg 1 | • Unit 5 Assignment: Polygons<br>• Unit 5 Test: Quadrilaterals and Polygons<br><br>• Unit 4 Assignment: Solids<br>• Unit 4 Test: Surface Area and Volume<br><br>Using multiple choice questions students are asked to identify which solids best model certain shapes. | 349098<br><br>349118 |                  |                  |
|           |  | MACC.912.G-MG.1.2   | Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot).  | Geometry B<br>Unit 4: Surface Area and Volume  | Applications of Area and Volume Pgs 1-2                 |  | 349030               |                  |                  |
|           |  | MACC.912.G-MG.1.3   | Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).   | Geometry B<br>Unit 2: Circles  |   |  | 344893               |                  |                  |
| S.ID      | <b>Interpreting Categorical and Quantitative Data</b>  |                     |  |  |   |  |                      |                  |                  |
| Cluster 1 | <b>Summarize, represent, and interpret data on a single count or measurement variable</b>                  |                     |  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.1.1   | Represent data with plots on the real number line (dot plots, histograms, and box plots).  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.1.2   | Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.   |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.1.3   | Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).   |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.1.4   | Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve. |  |   |  |                      |                  |                  |
| Cluster 2 | <b>Summarize, represent, and interpret data on two categorical and quantitative variables</b>              |                     |  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.2.5   | Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.                                    |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.2.6   | Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.  |  |   |  |                      |                  |                  |
|           | MACC.912.S-ID.2.6  | MACC.912.S-ID.2.6.a | Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.   |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.2.6.b | Informally assess the fit of a function by plotting and analyzing residuals.   |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.2.6.c | Fit a linear function to a scatter plot that suggests a linear association.  |  |   |  |                      |                  |                  |
| Cluster 3 | <b>Interpret linear models</b>   |                     |  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.3.7   | Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.   |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.3.8   | Compute (using technology) and interpret the correlation coefficient of a linear fit.  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-ID.3.9   | Distinguish between correlation and causation.   |  |   |  |                      |                  |                  |
| S.IC      | <b>Making Inferences and Justifying Conclusions</b>  |                     |  |  |   |  |                      |                  |                  |
| Cluster 1 | <b>Understand and evaluate random processes underlying statistical experiments</b>                         |                     |  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-IC.1.1   | Understand statistics as a process for making inferences about population parameters based on a random sample from that population.  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-IC.1.2   | Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?                            |  |   |  |                      |                  |                  |
| Cluster 2 | <b>Make inferences and justify conclusions from sample surveys, experiments, and observational studies</b> |                     |  |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-IC.2.3   | Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.   |  |   |  |                      |                  |                  |
|           |  | MACC.912.S-IC.2.4   | Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling.   |  |   |  |                      |                  |                  |

| State     | Parent Standard ID   | Standard ID         | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-----------|--|---------------------|--|------------------|-------------|-----------------|------|------------------|------------------|
|           |  | MACC.912.S-IC.2.5   | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-IC.2.6   | Evaluate reports based on data.  |                  |             |                 |      |                  |                  |
| S.CP      | <b>Conditional Probability and the Rules of Probability</b>  |                     |  |                  |             |                 |      |                  |                  |
| Cluster 1 | <b>Understand independence and conditional probability and use them to interpret data</b>                      |                     |  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.1.1   | Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not").  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.1.2   | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities, and use this characterization to determine if they are independent.   |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.1.3   | Understand the conditional probability of A given B as $P(A B)$ , and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A, and the conditional probability of B given A is the same as the probability of B.   |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.1.4   | Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.1.5   | Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer.  |                  |             |                 |      |                  |                  |
| Cluster 2 | <b>Use the rules of probability to compute probabilities of compound events in a uniform probability model</b> |                     |  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.2.6   | Find the conditional probability of A given B as the fraction of B's outcomes that also belong to A, and interpret the answer in terms of the model.   |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.2.7   | Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$ , and interpret the answer in terms of the model.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.2.8   | (*) Apply the general Multiplication Rule in a uniform probability model, $P(A \text{ and } B) = P(A B)P(B)$ and $P(B A)P(A)$ , and interpret the answer in terms of the model.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-CP.2.9   | (*) Use permutations and combinations to compute probabilities of compound events and solve problems.  |                  |             |                 |      |                  |                  |
| S.MD      | <b>Using Probability to Make Decisions</b>   |                     |  |                  |             |                 |      |                  |                  |
| Cluster 1 | <b>Calculate expected values and use them to solve problems</b>  |                     |  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.1.1   | (*) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.1.2   | (*) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution.   |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.1.3   | (*) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.1.4   | (*) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?   |                  |             |                 |      |                  |                  |
| Cluster 2 | <b>Use probability to evaluate outcomes of decisions</b>   |                     |  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.2.5   | (*) Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values.   |                  |             |                 |      |                  |                  |
|           | MACC.912.S-MD.2.5  | MACC.912.S-MD.2.5.a | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.2.5.b | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.  |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.2.6   | (*) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).   |                  |             |                 |      |                  |                  |
|           |  | MACC.912.S-MD.2.7   | (*) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).  |                  |             |                 |      |                  |                  |
| A.SSE     | <b>Domain: MATHEMATICAL PRACTICE</b>   |                     |  |                  |             |                 |      |                  |                  |
| Cluster 1 | <b>Make sense of problems and persevere in solving them.</b>   |                     |  |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.1.1   | <p>Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p> |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 2          | <b>Reason abstractly and quantitatively.</b>                            |  |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.2.1   | <p>Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referent—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 3          | <b>Construct viable arguments and critique the reasoning of others.</b> |  |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.3.1   | <p>Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 4          | <b>Model with mathematics.</b>  |  |                  |             |                 |      |                  |                  |  |  |

| State | Parent Standard ID | Standard ID                                 | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|---|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.4.1                             | <p>Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 5          | <b>Use appropriate tools strategically.</b> |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.5.1                             | <p>Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 6          | <b>Attend to precision.</b>                 |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.6.1                             | <p>Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 7          | <b>Look for and make use of structure.</b>  |   |                  |             |                 |      |                  |                  |  |  |

|       |                    | MACC.K12.MP.7.1   | Look for and make use of structure.<br>Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$ , older students can see the $14$ as $2 \times 7$ and the $9$ as $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see $5 - 3(x - y)^2$ as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers $x$ and $y$ .<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts |                  |             |                 |      |                  |                  |
|       | Cluster 6          | <b>Look for and express regularity in repeated reasoning.</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.8.1   | Look for and express regularity in repeated reasoning.<br>Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through $(1, 2)$ with slope 3, middle school students might abstract the equation $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$ , $(x - 1)(x^2 + x + 1)$ , and $(x - 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning  |                  |             |                 |      |                  |                  |

|   | Cluster 2                           | <b>Represent complex numbers and their operations on the complex plane</b> |  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-CN.2.4  | (+) Represent complex numbers on the complex plane in rectangular and polar form (including real and imaginary numbers), and explain why the rectangular and polar forms of a given complex number represent the same number.  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-CN.2.5  | (+) Represent addition, subtraction, multiplication, and conjugation of complex numbers geometrically on the complex plane; use properties of this representation for computation. For example, $(-1 + i\sqrt{3})^2 = 8$ because $(-1 + i\sqrt{3})$ has modulus 2 and argument $120^\circ$ .   |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-CN.2.6  | (+) Calculate the distance between numbers in the complex plane as the modulus of the difference, and the midpoint of a segment as the average of the numbers at its endpoints.  |                  |             |                 |      |                  |                  |  |
|   | Cluster 3                           | <b>Use complex numbers in polynomial identities and equations</b>          |  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-CN.3.7  | Solve quadratic equations with real coefficients that have complex solutions.  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-CN.3.8  | (+) Extend polynomial identities to the complex numbers. For example, rewrite $x^2 + 4$ as $(x + 2i)(x - 2i)$ .  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-CN.3.9  | (+) Know the Fundamental Theorem of Algebra; show that it is true for quadratic polynomials.   |                  |             |                 |      |                  |                  |  |
| N.V   | <b>Vector and Matrix Quantities</b> |  |  |                  |             |                 |      |                  |                  |  |
|   | Cluster 1                           | <b>Represent and Model with Vector Quantities</b>                          |  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-VM.1.1  | (+) Recognize vector quantities as having both magnitude and direction. Represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes (e.g., $\vec{v}$ , $ \vec{v} $ , $v$ , $  v  $ , $ v $ ).  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-VM.1.2  | (+) Find the components of a vector by subtracting the coordinates of an initial point from the coordinates of a terminal point.   |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-VM.1.3  | (+) Solve problems involving velocity and other quantities that can be represented by vector.  |                  |             |                 |      |                  |                  |  |
|   | Cluster 2                           | <b>Perform Operations on Vectors</b>                                       |  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-VM.2.4  | (+) Add and subtract vectors.  |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-VM.2.4.a  | Add vectors end-to-end, component-wise, and by the parallelogram rule. Understand that the magnitude of a sum of two vectors is typically not the sum of the magnitudes.   |                  |             |                 |      |                  |                  |  |
|   |                                     | MACC.912.N-VM.2.4.b  | Given two vectors in magnitude and direction form, determine the magnitude and direction of their sum.   |                  |             |                 |      |                  |                  |  |

| State | Parent Standard ID  | Standard ID   | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|---|---|---|------------------|-------------|-----------------|------|------------------|------------------|
|       |   | MACC.912.N-VM.2.4.c   | Understand vector subtraction $v - w$ as $v + (-w)$ , where $-w$ is the additive inverse of $w$ , with the same magnitude as $w$ and pointing in the opposite direction. Represent vector subtraction graphically by connecting the tips in the appropriate order, and perform vector subtraction component-wise. |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.2.5   | (+) Multiply a vector by a scalar   |                  |             |                 |      |                  |                  |
|       | MACC.912.N-VM.2.5   | MACC.912.N-VM.2.5.a   | Represent scalar multiplication graphically by scaling vectors and possibly reversing their direction; perform scalar multiplication component-wise, e.g., as $c(v_x, v_y) = (cv_x, cv_y)$ .  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.2.5.b   | Compute the magnitude of a scalar multiple $cv$ or using $ cv  =  c  v $ ; compute the direction of $cv$ knowing that when $ c  > 0$ , the direction of $cv$ is either along $v$ (for $c > 0$ ) or against $v$ (for $c < 0$ ).  |                  |             |                 |      |                  |                  |
|       | Cluster 3   | <b>Perform operations on matrices and use matrices in applications</b>      |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.6   | (+) Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network.  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.7   | (+) Multiply matrices by scalars to produce new matrices, e.g., as when all of the payoffs in a game are doubled.   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.8   | (+) Add, subtract, and multiply matrices of appropriate dimensions.   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.9   | (+) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties.   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.10  | (+) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse.  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.11  | (+) Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors.  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.N-VM.3.12  | (+) Work with $2 \times 2$ matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area.  |                  |             |                 |      |                  |                  |
| A.SSE | <b>Seeing Structure in Expressions</b>                      |   |   |                  |             |                 |      |                  |                  |
|       | Cluster 1   | <b>Interpret the structure of expressions</b>                               |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.1.1  | Interpret expressions that represent a quantity in terms of its context.  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.1.1.a  | Interpret parts of an expression, such as terms, factors, and coefficients.   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.1.1.b  | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+r)^n$ as the product of $P$ and a factor not depending on $P$ .   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.1.2  | Use the structure of an expression to identify ways to rewrite it. For example, see $x^2 - y^2$ as $(x+y)(x-y)$ , thus recognizing it as a difference of squares that can be factored as $(x+y)(x-y)$ .   |                  |             |                 |      |                  |                  |
|       | Cluster 2   | <b>Write expressions in equivalent forms to solve problems</b>              |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.2.3  | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.2.3.a  | Factor a quadratic expression to reveal the zeros of the function it defines.   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.2.3.b  | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.2.3.c  | Use the properties of exponents to transform expressions for exponential functions. For example, the expression $1.15t$ can be rewritten as $(1.15^{\frac{1}{12}})^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-SSE.2.4  | Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. For example, calculate mortgage payments.  |                  |             |                 |      |                  |                  |
| A.APR | <b>Arithmetic with Polynomials and Rational Expressions</b> |   |   |                  |             |                 |      |                  |                  |
|       | Cluster 1   | <b>Perform arithmetic operations on polynomials</b>                         |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-APR.1.1  | Understand that polynomials form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero polynomial.  |                  |             |                 |      |                  |                  |
|       | Cluster 2   | <b>Understand the relationship between zeros and factors of polynomials</b> |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-APR.2.2  | Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number $a$ , the remainder on division by $x - a$ is $p(a)$ , so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$ .  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.A-APR.2.3  | Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial.   |                  |             |                 |      |                  |                  |
|       | Cluster 3   | <b>Use polynomial identities to solve problems</b>                          |   |                  |             |                 |      |                  |                  |

| State | Parent Standard ID                               | Standard ID   | State Standard Description  | Course/Unit Name                            | Lesson Name | Assessment Name  | RSID   | Bloom's Expected | Bloom's Achieved |
|-------|--|---|---|---|-------------|--|--------|------------------|------------------|
|       |  | MACC.912.A-APR.3.4  | Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ can be used to generate Pythagorean triples.   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-APR.3.5  | (+) Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of $x$ and $y$ for a positive integer $n$ , where $x$ and $y$ are any numbers, with coefficients determined for example by Pascal's Triangle.  |   |             |  |        |                  |                  |
|       | Cluster 4  | <b>Rewrite rational expressions</b>                                       |   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-APR.4.6  | Rewrite simple rational expressions in different forms; write $\frac{a(x)+b(x)}{c(x)}$ in the form $q(x) + \frac{r(x)}{c(x)}$ , where $q(x)$ , $b(x)$ , $c(x)$ , and $r(x)$ are polynomials with the degree of $r(x)$ less than the degree of $c(x)$ , using inspection, long division, or, for the more complicated examples, a computer algebra system. |   |             |  |        |                  |                  |
|       |  | MACC.912.A-APR.4.7  | (+) Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.  |   |             |  |        |                  |                  |
| A.CED | <b>Creating Equations</b>                        |   |   |   |             |  |        |                  |                  |
|       | Cluster 1  | <b>Create equations that describe numbers or relationships</b>            |   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-CED.1.1  | Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-CED.1.2  | Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-CED.1.3  | Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or nonviable options in a modeling context. For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.  |   |             |  |        |                  |                  |
|       |  | MACC.912.A-CED.1.4  | Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. For example, rearrange Ohm's law $V = IR$ to highlight resistance $R$ .   |   |             |  |        |                  |                  |
| A.REI | <b>Reasoning with Equations and Inequalities</b> |   |   |   |             |  |        |                  |                  |
|       | Cluster 1  | <b>Understand solving equations as a process of reasoning and explain</b> |   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.1.1  | Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.   | Geometry A<br>Unit 2: Reasoning in Geometry | * Proof     | Through a text based lesson with interactive practice problems, students will justify reasons for each step in the solution of a first order equation. | 344774 |                  |                  |
|       |  | MACC.912.A-REI.1.2  | Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.  |   |             |  |        |                  |                  |
|       | Cluster 2  | <b>Solve equations and inequalities in one variable</b>                   |   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.2.3  | Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.  |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.2.4  | Solve quadratic equations in one variable.  |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.2.4.a  | Use the method of completing the square to transform any quadratic equation in $x$ into an equation of the form $(x - p)^2 = q$ , that has the same solutions. Derive the quadratic formula from this form.   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.2.4.b  | Solve quadratic equations by inspection (e.g., for $x^2 = 49$ ), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a + bi$ for real numbers $a$ and $b$ .                              |   |             |  |        |                  |                  |
|       | Cluster 3  | <b>Solve systems of equations</b>   |   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.3.5  | Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.   |   |             |  |        |                  |                  |
|       |  | MACC.912.A-REI.3.6  | Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.  |   |             |  |        |                  |                  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name                                     | Lesson Name  | Assessment Name   | RSID   | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|--|--|---|--|------------------|------------------|
|       |                    | MACC.912.A-REI.3.7  | Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$ .  |  |  |   |  |                  |                  |
|       |                    | MACC.912.A-REI.3.8  | (+) Represent a system of linear equations as a single matrix equation in a vector variable.   |  |  |   |  |                  |                  |
|       |                    | MACC.912.A-REI.3.9  | (+) Find the inverse of a matrix if it exists and use it to solve systems of linear equations (using technology for matrices of dimension $3 \times 3$ or greater).  |  |  |   |  |                  |                  |
|       | Cluster 4          | <b>Represent and solve equations and inequalities graphically</b>             |  |  |  |   |  |                  |                  |
|       |                    | MACC.912.A-REI.4.10   | Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).  |  |  |   |  |                  |                  |
|       |                    | MACC.912.A-REI.4.11   | Explain why the $x$ -coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions. |  |  |   |  |                  |                  |
|       |                    | MACC.912.A-REI.4.12   | Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.  |  |  |   |  |                  |                  |
|       | F.IF               | <b>Interpreting functions</b>   |  |  |  |   |  |                  |                  |
|       | Cluster 1          | <b>Understand the concept of a function and use function notation</b>         |  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.1.1   | Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$ . The graph of $f$ is the graph of the equation $y = f(x)$ .  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.1.2   | Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.1.3   | Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1$ , $f(n+1) = f(n) + f(n-1)$ for $n \geq 1$ .   |  |  |   |  |                  |                  |
|       | Cluster 2          | <b>Interpret functions that arise in applications in terms of the context</b> |  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.2.4   | For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.                     |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.2.5   | Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function $h(n)$ gives the number of person-hours it takes to assemble $n$ engines in a factory, then the positive integers would be an appropriate domain for the function.   |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.2.6   | Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.   | Geometry A<br>Unit 3: Lines and the Coordinate Plane | Slope of a Line Pgs 1-2<br>Problem Solving Using Slope Pgs 1-2<br>Slope-Intercept Form Pgs 1-4<br>Point-Slope Form Pg 2 (1 example)<br>Solving Problems Using Linear Graphs Pgs 1-2                              | Unit 3 Assignment: Slope<br>Unit 3 assignment: Graphing Linear Equations<br>Unit 3 Test: Lines and the Coordinate Plane | 346077<br>344828<br>344842<br>344843<br>344847 |                  |                  |
|       |                    |   |  |  | Through text based lessons with examples and interactive practice problems, students will identify slope as the measure of rate of change of a graph over a specific interval and calculate that rate of change. | Using multiple choice questions, students will calculate slope from tables, graphs, and points.                         |  |                  |                  |
|       | Cluster 3          | <b>Analyze functions using different representations</b>                      |  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7   | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.a   | Graph linear and quadratic functions and show intercepts, maxima, and minima.  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.b   | Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.  |  |  |   |  |                  |                  |
|       |                    | MACC.912.F-IF.3.7.c   | Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.  |  |  |   |  |                  |                  |

|       |                    | MACC.912.F-IF.3.7.d   | (+) Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.3.7.e   | Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.3.8   | Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.3.8.a   | Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.3.8.b   | Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as $y = (1.02)^x$ , $y = (0.97)^x$ , $y = (1.01)^{3x}$ , $y = (1.2)^{\frac{x}{3}}$ , and classify them as representing exponential growth or decay.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-IF.3.9   | Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.  |                  |             |                 |      |                  |                  |
|       | F.BF               | <b>Building Functions</b>   |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Build a function that models a relationship between two quantities</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.1.1   | Write a function that describes a relationship between two quantities.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.1.1.a   | Determine an explicit expression, a recursive process, or steps for calculation from a context.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.1.1.b   | Combine standard function types using arithmetic operations. For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.1.1.c   | (+) Compose functions. For example, if $T(y)$ is the temperature in the atmosphere as a function of height, and $h(t)$ is the height of a weather balloon as a function of time, then $T(h(t))$ is the temperature at the location of the weather balloon as a function of time.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.1.2   | Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.   |                  |             |                 |      |                  |                  |
|       | Cluster 2          | <b>Build new functions from existing functions</b>                        |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.3   | Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$ , $k f(x)$ , $f(kx)$ , and $f(x + k)$ for specific values of $k$ (both positive and negative); find the value of $k$ given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. Include recognizing even and odd functions from their graphs and algebraic expressions for them. |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.4   | Find inverse functions.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.4.a   | Solve an equation of the form $f(x) = c$ for a simple function $f$ that has an inverse and write an expression for the inverse. For example, $f(x) = 2x^3$ or $f(x) = (x+1)^2$ for $x \neq -1$ .   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.4.b   | (+) Verify by composition that one function is the inverse of another.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.4.c   | (+) Read values of an inverse function from a graph or a table, given that the function has an inverse.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.4.d   | (+) Produce an invertible function from a non-invertible function by restricting the domain.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-BF.2.5   | (+) Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents.   |                  |             |                 |      |                  |                  |
|       | F.LE               | <b>Linear, Quadratic, and Exponential Models</b>                          |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Construct and compare linear, quadratic, and exponential models</b>    |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-LE.1.1   | Distinguish between situations that can be modeled with linear functions and with exponential functions.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-LE.1.1.a   | Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-LE.1.1.b   | Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-LE.1.1.c   | Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.F-LE.1.2   | Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).  |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name                                 | Lesson Name  | Assessment Name  | RSID   | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|--|--|--|--|------------------|------------------|
|       |                    | MACC.912.F-LE.1.3   | Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function  |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-LE.1.4   | For exponential models, express as a logarithm the solution to $ab^{ct} = d$ where $a$ , $c$ , and $d$ are numbers and the base $b$ is 2, 10, or $e$ ; evaluate the logarithm using technology.  |  |  |  |  |                  |                  |
|       | Cluster 2          | <b>Interpret expressions for functions in terms of the situation they model</b> |  |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-LE.2.5   | Interpret the parameters in a linear or exponential function in terms of a context   |  |  |  |  |                  |                  |
|       | F.TF               | <b>Trigonometric Functions</b>  |  |  |  |  |  |                  |                  |
|       | Cluster 1          | <b>Extend the domain of trigonometric functions using the unit circle</b>       |  |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.1.1   | Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.  |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.1.2   | Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle   |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.1.3   | (+) Use special triangles to determine geometrically the values of sine, cosine, tangent for $\pi/3$ , $\pi/4$ and $\pi/6$ , and use the unit circle to express the values of sine, cosine, and tangent for $-\pi$ , $-\pi/2$ , $\pi/2$ , and $2\pi - \pi$ in terms of their values for $\pi/3$ , where $\pi$ is any real number |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.1.4   | (+) Use the unit circle to explain symmetry (odd and even) and periodicity of trigonometric functions  |  |  |  |  |                  |                  |
|       | Cluster 2          | <b>Model periodic phenomena with trigonometric functions</b>                    |  |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.2.5   | Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.   |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.2.6   | (+) Understand that restricting a trigonometric function to a domain on which it is always increasing or always decreasing allows its inverse to be constructed.   |  |  |  |  |                  |                  |
|       |                    | MACC.912.F-TF.2.7   | (+) Use inverse functions to solve trigonometric equations that arise in modeling contexts; evaluate the solutions using technology, and interpret them in terms of the context.   |  |  |  |  |                  |                  |

|       |                    | MACC.912.G-GMD.1.2  | (+) Give an informal argument using Cavalieri's principle for the formulas for the volume of a sphere and other solid figures   | Geometry B<br>Unit 4: Surface Area and Volume  | • Volume of a Pyramid or Cone Pg 1<br>• Volume of a Sphere Pg 1<br><br>Using a text and animation based lesson, students will view the formal derivation of the formula for the volume of a sphere, based on the Cavalieri principle.  | • Unit 4 Assignment: Volume<br><br>Using multiple choice questions, students will find the volume of spheres and other solid figures.  | 344999<br>345008                                   |                  |                  |
|       |                    | MACC.912.G-GMD.1.3  | Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems.  | Geometry B<br>Unit 4: Surface Area and Volume  | • Volume of a Cylinder Pgs 2-3<br>• Volume of a Pyramid or Cone Pgs 1-3<br>• Volume of a Sphere Pgs 2-5<br>• Applications of Area and Volume Pgs 1-2<br><br>Using text, animation, and multimedia with audio based lessons with examples and interactive student practice problems, students will find the volume of various solids.   | • Unit 4 Assignment: Volume<br>• Unit 4 Test: Surface Area and Volume<br><br>Using multiple choice and free response questions, students find the volume of prisms, cylinders, pyramids, cones, and spheres.   | 344998<br>344999<br>345008<br>349030               |                  |                  |
|       | Cluster 2          | <b>Visualize relationships between two dimensional and three dimensional</b>        |   |  |  |  |  |                  |                  |
|       |                    | MACC.912.G-GMD.2.4  | Identify the shapes of two-dimensional cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects  | Geometry B<br>Unit 4: Surface Area and Volume<br><br>Unit 5: Transformations                           | • Prisms Pg 2<br>• Cylinders Pg 2<br>• Pyramids and Cones Pg 2<br>• Spheres Pg 1<br><br>• Rotations Pg 2<br><br>In text, teacher led video, and animation based lessons, students will determine the shape of the cross sections of prisms, pyramids, cones, and spheres. Additionally, they will determine that rotating a rectangle produces a cylinder and that rotating a triangle creates a cone. | • Unit 4 Assignment: Solids and Volume<br>• Unit 4 Test: Surface Area and Volume<br><br>Using multiple choice questions, students identify the shapes of cross sections of cylinders and spheres both parallel to and perpendicular to the bases.                      | 344881<br>344993<br>349031<br>349118<br><br>345028 |                  |                  |
|       | G.MG               | <b>Modeling with Geometry</b>   |   |  |  |  |  |                  |                  |
|       | Cluster 1          | <b>Apply geometric concepts in modeling situations</b>                              |   |  |  |  |  |                  |                  |
|       |                    | MACC.912.G-MG.1.1   | Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).  | Geometry A<br>Unit 5: Quadrilaterals and Polygons<br><br>Geometry B<br>Unit 4: Surface Area and Volume | • Regular vs. Irregular Polygons Pg 1<br><br>• Spheres Pg 1<br><br>In text based lessons with appropriate graphics, students will verify that many street signs are formed from regular and irregular shapes.  | • Unit 5 Assignment: Polygons<br>• Unit 5 Test: Quadrilaterals and Polygons<br><br>• Unit 4 Assignment: Solids<br>• Unit 4 Test: Surface Area and Volume<br><br>Using multiple choice questions students are asked to identify which solids best model certain shapes. | 349098<br><br><br>349118                           |                  |                  |
|       |                    | MACC.912.G-MG.1.2   | Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot).   | Geometry B<br>Unit 4: Surface Area and Volume  | • Applications of Area and Volume Pgs 1-2<br><br>In a text based lesson with graphics, students find population density per square mile and number of gum balls per cubic inch in a gum ball machine.  |  | 349030   |                  |                  |
|       |                    | MACC.912.G-MG.1.3   | Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).  | Geometry B<br>Unit 2: Circles  | • Arc Length and Area of a Sector Pg 7<br><br>In a text and teacher led video based lesson with animation and interactive student practice problems, students find the perimeter of an arched doorway laid off on a grid. Then the students use the length of a semi-circle to find the length of the wire in a paperclip laid out on a grid.  |  | 344893   |                  |                  |
|       | S.ID               | <b>Interpreting Categorical and Quantitative Data</b>                               |   |  |  |  |  |                  |                  |
|       | Cluster 1          | <b>Summarize, represent, and interpret data on a single count or measurement</b>    |   |  |  |  |  |                  |                  |
|       |                    | MACC.912.S-ID.1.1   | Represent data with plots on the real number line (dot plots, histograms, and box plots)  |  |  |  |  |                  |                  |
|       |                    | MACC.912.S-ID.1.2   | Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets   |  |  |  |  |                  |                  |
|       |                    | MACC.912.S-ID.1.3   | Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers)   |  |  |  |  |                  |                  |
|       |                    | MACC.912.S-ID.1.4   | Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve |  |  |  |  |                  |                  |
|       | Cluster 2          | <b>Summarize, represent, and interpret data on two categorical and quantitative</b> |   |  |  |  |  |                  |                  |

| State | Parent Standard ID | Standard ID  | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|--|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.912.S-ID.2.5  | Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-ID.2.6  | Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.  |                  |             |                 |      |                  |                  |
|       | MACC.912.S-ID.2.6  | MACC.912.S-ID.2.6.a  | Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-ID.2.6.b  | Informally assess the fit of a function by plotting and analyzing residuals.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-ID.2.6.c  | Fit a linear function for a scatter plot that suggests a linear association.   |                  |             |                 |      |                  |                  |
|       | Cluster 3          | <b>Interpret linear models</b>   |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-ID.3.7  | Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-ID.3.8  | Compute (using technology) and interpret the correlation coefficient of a linear fit.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-ID.3.9  | Distinguish between correlation and causation  |                  |             |                 |      |                  |                  |
|       | S.IC               | <b>Making Inferences and Justifying Conclusions</b>  |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Understand and evaluate random processes underlying statistical experiments</b>   |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.1.1  | Understand statistics as a process for making inferences about population parameters based on a random sample from that population.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.1.2  | Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?  |                  |             |                 |      |                  |                  |
|       | Cluster 2          | <b>Make inferences and justify conclusions from sample surveys, experiments, and observational studies; explain how randomization relates to each.</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.3  | Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.4  | Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.5  | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.6  | Evaluate reports based on data   |                  |             |                 |      |                  |                  |
|       | S.CP               | <b>Conditional Probability and the Rules of Probability</b>  |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Understand independence and conditional probability and use them to</b>   |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.1  | Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not").  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.2  | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities, and use this characterization to determine if they are independent.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.3  | Understand the conditional probability of A given B as $P(A B)$ and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A, and the conditional probability of B given A is the same as the probability of B.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.4  | Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.5  | Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer.  |                  |             |                 |      |                  |                  |
|       | Cluster 2          | <b>Use the rules of probability to compute probabilities of compound events in a</b>   |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.6  | Find the conditional probability of A given B as the fraction of B's outcomes that also belong to A, and interpret the answer in terms of the model.   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.7  | Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$ , and interpret the answer in terms of the model.  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.8  | (+) Apply the general Multiplication Rule in a uniform probability model: $P(A \text{ and } B) = P(A)P(B A) = P(B)P(A B)$ , and interpret the answer in terms of the model.  |                  |             |                 |      |                  |                  |

|              |  | MACC.912.S-CP.2.9   | (+) Use permutations and combinations to compute probabilities of compound events and solve problems.   |                  |             |                 |      |                  |                  |  |
| <b>S.MD</b>  | <b>Using Probability to Make Decisions</b> |   |   |                  |             |                 |      |                  |                  |  |
|              | Cluster 1                                  | <b>Calculate expected values and use them to solve problems</b> |   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.1.1   | (+) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions.   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.1.2   | (+) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution.  |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.1.3   | (+) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes.   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.1.4   | (+) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?  |                  |             |                 |      |                  |                  |  |
|              | Cluster 2                                  | <b>Use probability to evaluate outcomes of decisions</b>        |   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.2.5   | (+) Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values.  |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.2.5.a   | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant.   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.2.5.b   | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.2.6   | (+) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).  |                  |             |                 |      |                  |                  |  |
|              |  | MACC.912.S-MD.2.7   | (+) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).   |                  |             |                 |      |                  |                  |  |
| <b>A.SSE</b> | <b>Domain: MATHEMATICAL PRACTICE</b>       |   |   |                  |             |                 |      |                  |                  |  |
|              | Cluster 1                                  | <b>Make sense of problems and persevere in solving them.</b>    |   |                  |             |                 |      |                  |                  |  |
|              |  | MACC.K12.MP.1.1   | Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning |                  |             |                 |      |                  |                  |  |
|              | Cluster 2                                  | <b>Reason abstractly and quantitatively.</b>                    |   |                  |             |                 |      |                  |                  |  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.2.1   | Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand, considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning   |                  |             |                 |      |                  |                  |
|       | Cluster 3          | <b>Construct viable arguments and critique the reasoning of others.</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.3.1   | Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments. |                  |             |                 |      |                  |                  |
|       | Cluster 4          | <b>Model with mathematics.</b>  |  |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID                                 | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|---|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.4.1                             | <p>Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |
|       | Cluster 5          | <b>Use appropriate tools strategically.</b> |   |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.5.1                             | <p>Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> |                  |             |                 |      |                  |                  |
|       | Cluster 6          | <b>Attend to precision.</b>                 |   |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.6.1   | <p>Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |                  |             |                 |      |                  |                  |
|       | Cluster 7          | <b>Look for and make use of structure.</b>                    |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.7.1   | <p>Look for and make use of structure. Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see <math>7 \times 8</math> equals the well remembered <math>7 \times 5 + 7 \times 3</math>, in preparation for learning about the distributive property. In the expression <math>x^2 + 9x + 14</math>, older students can see the <math>14</math> as <math>2 \times 7</math> and the <math>9</math> as <math>2 + 7</math>. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see <math>5 - 3(x - y)^2</math> as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers <math>x</math> and <math>y</math>.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> |                  |             |                 |      |                  |                  |
|       | Cluster 8          | <b>Look for and express regularity in repeated reasoning.</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.8.1   | <p>Look for and express regularity in repeated reasoning. Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through <math>(1, 2)</math> with slope 3, middle school students might abstract the equation <math>(y - 2)/(x - 1) = 3</math>. Noticing the regularity in the way terms cancel when expanding <math>(x - 1)(x + 1)</math>, <math>(x - 1)(x^2 + x + 1)</math>, and <math>(x - 1)(x^3 + x^2 + x + 1)</math> might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |

|       |   | MACC.912.S-IC.2.3  | Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-IC.2.4  | Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-IC.2.5  | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-IC.2.6  | Evaluate reports based on data   |                  |             |                 |      |                  |                  |
| S.CP  | <b>Conditional Probability and the Rules of Probability</b> |  |  |                  |             |                 |      |                  |                  |
|       | Cluster 1   | <b>Understand independence and conditional probability</b> |  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-CP.1.1  | Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not")   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-CP.1.2  | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities, and use this characterization to determine if they are independent  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-CP.1.3  | Understand the conditional probability of A given B as $P(A B)$ and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A, and the conditional probability of B given A is the same as the probability of B  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.S-CP.1.4  | Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. |                  |             |                 |      |                  |                  |

| State | Parent Standard ID                         | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |  | MACC.912.S-CP.1.5   | Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer   |                  |             |                 |      |                  |                  |
|       | Cluster 2                                  | <b>Use the rules of probability to compute probabilities of</b> |  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.6   | Find the conditional probability of A given B as the fraction of B's outcomes that also belong to A, and interpret the answer in terms of the model  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.7   | Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$ , and interpret the answer in terms of the model   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.8   | (+) Apply the general Multiplication Rule in a uniform probability model, $P(A \text{ and } B) = P(A)P(B A) = P(B)P(A B)$ , and interpret the answer in terms of the model   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.9   | (+) Use permutations and combinations to compute probabilities of compound events and solve problems   |                  |             |                 |      |                  |                  |
| S.MD  | <b>Using Probability to Make Decisions</b> |   |  |                  |             |                 |      |                  |                  |
|       | Cluster 1                                  | <b>Calculate expected values and use them to solve</b>          |  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.1   | (+) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.2   | (+) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.3   | (+) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.4   | (+) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?                     |                  |             |                 |      |                  |                  |
|       | Cluster 2                                  | <b>Use probability to evaluate outcomes of decisions</b>        |  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.2.5   | (+) Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values  |                  |             |                 |      |                  |                  |
|       | MACC.912.S-MD.2.5                          | MACC.912.S-MD.2.5.a   | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant   |                  |             |                 |      |                  |                  |

| State | Parent Standard ID                   | Standard ID   | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |

|       |                                      | MACC.912.S-MD.2.5.b   | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.   |                  |             |                 |      |                  |                  |
|       |                                      | MACC.912.S-MD.2.6   | (*) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).  |                  |             |                 |      |                  |                  |
|       |                                      | MACC.912.S-MD.2.7   | (*) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).   |                  |             |                 |      |                  |                  |
| A.SSE | <b>Domain: MATHEMATICAL PRACTICE</b> |   |   |                  |             |                 |      |                  |                  |
|       | Cluster 1                            | <b>Make sense of problems and persevere in solving them.</b>  |   |                  |             |                 |      |                  |                  |
|       |                                      | MACC.K12.MP.1.1   | Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. |                  |             |                 |      |                  |                  |
|       | Cluster 2                            | <b>Reason abstractly and quantitatively.</b>                  |   |                  |             |                 |      |                  |                  |
|       |                                      | MACC.K12.MP.2.1   | Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand, considering the units involved, attending to the meaning of quantities, not just how to compute them, and  |                  |             |                 |      |                  |                  |
|       | Cluster 3                            | <b>Construct viable arguments and critique the reasoning.</b> |   |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID                                 | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.3.1                             | Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or                                   |                  |             |                 |      |                  |                  |
|       | Cluster 4          | <b>Model with mathematics.</b>              |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.4.1                             | Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their |                  |             |                 |      |                  |                  |
|       | Cluster 5          | <b>Use appropriate tools strategically.</b> |  |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID                         | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|-------------------------------------|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.5.1                     | Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 6          | Attend to precision.                |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.6.1                     | Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.  |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 7          | Look for and make use of structure. |   |                  |             |                 |      |                  |                  |  |  |

| State | Parent Standard ID | Standard ID  | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |  |
|-------|--------------------|--|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.7.1  | Look for and make use of structure. Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression $x + 9x + 14$ , older students can see the $14$ as $2 \times 7$ and the $9$ as $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 8          | Look for and express regularity in repeated reasoning. |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.8.1  | Look for and express regularity in repeated reasoning. Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing $25$ by $11$ that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through $(1, 2)$ with slope $3$ , middle school students might abstract the equation $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$ , $(x - 1)(x + 1)$ , and $(x - 1)(x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain              |                  |             |                 |      |                  |                  |  |  |

| CCMA<br>N.RN | <b>The Real Number Systems</b>                            |  |  |   |   |                 |      |                  |                  |
|              | Cluster 1   | <b>Extend the properties of exponents to rational</b>  |  |   |   |                 |      |                  |                  |
|              |   | MACC.912.N-RN.1.1  | Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. For example, we define $5^{1/3}$ to be the cube root of 5 because we want $(5^{1/3})^3 = 5(1/3)^3$ to hold, so $(5^{1/3})^3$ must equal 5 |   |   |                 |      |                  |                  |
|              |   | MACC.912.N-RN.1.2  | Rewrite expressions involving radicals and rational exponents using the properties of exponents  |   |   |                 |      |                  |                  |
|              | Cluster 2   | <b>Use properties of rational and irrational numbers.</b>  |  |   |   |                 |      |                  |                  |
|              |   | MACC.912.N-RN.2.3  | Explain why the sum of product of two rational numbers is rational; that the sum of a rational number and an irrational number is irrational; and that the product of a nonzero rational number and an irrational number is irrational.  |   |   |                 |      |                  |                  |
|              | N.Q   | <b>Quantities</b>  |  |   |   |                 |      |                  |                  |
|              | Cluster 1   | <b>Reason quantitatively and use units to solve problems</b>   |  |   |   |                 |      |                  |                  |
|              |   | MACC.912.N-Q.1.1   | Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays   |   |   |                 |      |                  |                  |
|              |   | MACC.912.N-Q.1.2   | Define appropriate quantities for the purpose of descriptive modeling  |   |   |                 |      |                  |                  |
|              | MACC.912.N-Q.1.3  | Choose a level of accuracy appropriate to limitations on measurement when reporting quantities   |  |   |   |                 |      |                  |                  |
| N.CN         | <b>The Complex Number Systems</b>                         |  |  |   |   |                 |      |                  |                  |
| Cluster 1    | <b>Perform arithmetic operations with complex numbers</b> |  |  |   |   |                 |      |                  |                  |
|              | MACC.912.N-CN.1.1   | Know there is a complex number $i$ such that $i^2 = -1$ , and every complex number has the form $a + bi$ with a real $a$ and $b$         | Algebra IIA<br>Unit 4: Quadratic Functions   | * Imaginary and Complex Numbers Pgs 2-3<br><br>In a text based lesson with student practice problems, students are given the definitions of the imaginary unit and the complex number in a $a + bi$ form.             | * Unit 4 Assignment: Solving Quadratic Equations by Taking the Square Root and Completing the Square<br>* Unit 4 Test: Quadratic Functions<br><br>Using multiple choice questions, students must identify various powers of $i$ and perform arithmetic operations with complex numbers. | 344412          |      |                  |                  |
|              | MACC.912.N-CN.1.2   | Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers | Algebra IIA<br>Unit 4: Quadratic Functions   | * Imaginary and Complex Numbers Pgs 2-3<br><br>In a text based lesson with student practice problems, students are shown how to compute powers of $i$ and how to add, subtract, multiply, and divide complex numbers. | * Unit 4 Assignment: Solving Quadratic Equations by Taking the Square Root and Completing the Square<br>* Unit 4 Test: Quadratic Functions<br><br>Using multiple choice questions, students must identify various powers of $i$ and perform arithmetic operations with complex numbers. | 344412          |      |                  |                  |
|              | MACC.912.N-CN.1.3   | (+) Find the conjugate of a complex number; use conjugates to find moduli and quotients of complex numbers                               |  |   |   |                 |      |                  |                  |
| Cluster 2    | <b>Represent complex numbers and their operations on</b>  |  |  |   |   |                 |      |                  |                  |

| State     | Parent Standard ID                                      | Standard ID        | State Standard Description   | Course/Unit Name                           | Lesson Name  | Assessment Name   | RSID                       | Bloom's Expected | Bloom's Achieved |
|-----------|---|--------------------|--|--|--|---|----------------------------|------------------|------------------|
|           |   | MACC.912.N-CN.2.4  | (+) Represent complex numbers on the complex plane in rectangular and polar form (including real and imaginary numbers), and explain why the rectangular and polar forms of a given complex number represent the same number   |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-CN.2.5  | (+) Represent addition, subtraction, multiplication, and conjugation of complex numbers geometrically on the complex plane; use properties of this representation for computation. For example, $(-1 + \sqrt{3}i)^2 = 8$ because $(-1 + \sqrt{3}i)$ has modulus 2 and argument $120^\circ$ |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-CN.2.6  | (+) Calculate the distance between numbers in the complex plane as the modulus of the difference, and the midpoint of a segment as the average of the numbers at its endpoints   |  |  |   |                            |                  |                  |
| Cluster 3 | <b>Use complex numbers in polynomial identities and</b> |                    |  |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-CN.3.7  | Solve quadratic equations with real coefficients that have complex solutions   | Algebra IIA<br>Unit 4: Quadratic Functions | * Solving Quadratic Functions by the Square Root Method Pgs 1 & 3<br>* Solving Quadratic Functions by Completing the Square Pgs 2-3<br>* The Discriminant and The Quadratic Formula Pg 4<br><br>In text based lessons with student practice problems, students solve quadratic equations using various techniques, seeing that complex solutions are just as likely as real solutions. | * Unit 4 Assignment: Solving Quadratic Equations by Taking the Square Root and Completing the Square<br>* Unit 4 Assignment: The Quadratic Formula and Solving Quadratic Inequalities<br>* Unit 4 Test: Quadratic Functions<br><br>Using multiple choice questions, students solve quadratic equations having complex roots using various techniques. | 343346<br>344413<br>344414 |                  |                  |
|           |   | MACC.912.N-CN.3.8  | (+) Extend polynomial identities to the complex numbers. For example, rewrite $x^2 + 4$ as $(x + 2i)(x - 2i)$  | Algebra IIB<br>Unit 4: Polynomials         | * Calculating Zeros of Polynomials, pg 2<br><br>In a text based lesson with student practice problems, students solve $x^2 + 4 = 0$ and get $\pm 2i$ . are shown that this leads to a factorization of $(x + 2i)(x - 2i)$  |   | 348969                     |                  |                  |
|           |   | MACC.912.N-CN.3.9  | (+) Know the Fundamental Theorem of Algebra; show that it is true for quadratic polynomials  | Algebra IIB<br>Unit 4: Polynomials         | * The Fundamental Theorem of Algebra Pgs 1 & 3<br><br>In a text based lesson with student practice problems, students are learn about the Fundamental Theorem of Algebra and that it allows that quadratic equations always have two solutions, even though the two solutions might be the same number.  | * Unit 4 Assignment: Factoring and Calculating Zeros<br>* Unit 4 Test: Polynomials<br><br>Using multiple choice questions, students determine the number of solutions of quadratic equations.   | 348970                     |                  |                  |
| NV        | <b>Vector and Matrix Quantities</b>                     |                    |  |  |  |   |                            |                  |                  |
| Cluster 1 | <b>Represent and Model with Vector Quantities</b>       |                    |  |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-VM.1.1  | (+) Recognize vector quantities as having both magnitude and direction. Represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes (e.g., $\vec{v}$ , $ \vec{v} $ , $v$ )   |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-VM.1.2  | (+) Find the components of a vector by subtracting the coordinates of an initial point from the coordinates of a terminal point  |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-VM.1.3  | (+) Solve problems involving velocity and other quantities that can be represented by vector   |  |  |   |                            |                  |                  |
| Cluster 2 | <b>Perform Operations on Vectors</b>                    |                    |  |  |  |   |                            |                  |                  |
|           |   | MACC.912.N-VM.2.4  | (+) Add and subtract vectors   |  |  |   |                            |                  |                  |
|           | MACC.912.N-VM.2.4                                       | MACC.912.N-VM.2.4a | Add vectors end-to-end, component-wise, and by the parallelogram rule. Understand that the magnitude of a sum of two vectors is typically not the sum of the magnitudes.   |  |  |   |                            |                  |                  |

| State | Parent Standard ID | Standard ID  | State Standard Description   | Course/Unit Name               | Lesson Name   | Assessment Name   | RSID             | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|--|--|--------------------------------|---|---|------------------|------------------|------------------|
|       |                    | MACC.912.N-VM.2.4.b                                | Given two vectors in magnitude and direction form, determine the magnitude and direction of their sum  |                                |   |   |                  |                  |                  |
|       |                    | MACC.912.N-VM.2.4.c                                | Understand vector subtraction $v - w$ as $v + (-w)$ , where $-w$ is the additive inverse of $w$ , with the same magnitude as $w$ and pointing in the opposite direction. Represent vector subtraction graphically by connecting the tips in the appropriate order, and perform vector subtraction component-wise |                                |   |   |                  |                  |                  |
|       |                    | MACC.912.N-VM.2.5                                  | (+) Multiply a vector by a scalar  |                                |   |   |                  |                  |                  |
|       | MACC.912.N-VM.2.5  | MACC.912.N-VM.2.5.a                                | Represent scalar multiplication graphically by scaling vectors and possibly reversing their direction; perform scalar multiplication component-wise, e.g., as $c(v_x, v_y) = (cv_x, cv_y)$   |                                |   |   |                  |                  |                  |
|       |                    | MACC.912.N-VM.2.5.b                                | Compute the magnitude of a scalar multiple $cv$ using $ cv  =  c v $ ; compute the direction of $cv$ knowing that when $ c  \neq 0$ , the direction of $cv$ is either along $v$ (for $c > 0$ ) or against $v$ (for $c < 0$ )   |                                |   |   |                  |                  |                  |
|       | Cluster 3          | Perform operations on matrices and use matrices in |  |                                |   |   |                  |                  |                  |
|       |                    | MACC.912.N-VM.3.6                                  | (+) Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network  | Algebra IB<br>Unit 1: Matrices | Matrix Basics Pgs 2-3<br>In a text-based lesson and practice activity, students are shown how to arrange given data into a suitable matrix  | Unit 1 Assignment: Adding and Subtracting Matrices<br>Unit 1 Test: Matrices   | 345907           |                  |                  |
|       |                    | MACC.912.N-VM.3.7                                  | (+) Multiply matrices by scalars to produce new matrices, e.g., as when all of the payoffs in a game are doubled   | Algebra IB<br>Unit 1: Matrices | Scalar Multiplication of Matrices Pgs 2-3<br>Through a text-based lesson with multimedia presentations with audio and practice activity, students will compute scalar multiples of given matrices.  | Unit 1 Assignment: Matrix Multiplication<br>Unit 1 Test: Matrices   | 345909           |                  |                  |
|       |                    | MACC.912.N-VM.3.8                                  | (+) Add, subtract, and multiply matrices of appropriate dimensions   | Algebra IB<br>Unit 1: Matrices | Adding and Subtracting Matrices Pgs 1-2<br>In text-based lessons with multimedia presentation with audio and an interactive game-type practice activity, students perform addition, subtraction, and multiplication of matrices.  | Unit 1 Assignment: Adding and Subtracting Matrices<br>Unit 1 Assignment: Matrix Multiplication<br>Unit 1 Test: Matrices | 345908           |                  |                  |
|       |                    | MACC.912.N-VM.3.9                                  | (+) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties   | Algebra IB<br>Unit 1: Matrices | Multiplication of Matrices Pg 4<br>In text-based lessons with multimedia presentation with audio and an interactive game-type practice activity, students are shown by example that matrix multiplication is not, in general, commutative, but is associative.  | Unit 1 Test: Matrices   | 345910           |                  |                  |
|       |                    | MACC.912.N-VM.3.10                                 | (+) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse  | Algebra IB<br>Unit 1: Matrices | Adding and Subtracting Matrices Pg 1<br>Determinant of a Matrix Pgs 1-3<br>Inverse of a 2x2 Matrix Pg 1<br>Through a text-based lesson and practice activity, students are shown that the zero matrix and identity matrix will take the place of 0 and 1 in real number operations and how to compute the inverse of a 2 by 2 matrix manually and a 3 by 3 matrix using technology. | Unit 1 Assignment: Determinants and Inverses<br>Unit 1 Test: Matrices   | 345908<br>345911 |                  |                  |
|       |                    | MACC.912.N-VM.3.11                                 | (+) Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors  |                                |   |   |                  |                  |                  |

|       | Cluster 2   | <b>Prove theorems involving similarity</b>                 |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.2.4   | Prove theorems about triangles. Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely; the Pythagorean Theorem proved using triangle similarity  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.2.5   | Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures  |                  |             |                 |      |                  |                  |
|       | Cluster 3   | <b>Define trigonometric ratios and solve problems</b>      |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.3.6   | Understand that by similarity, side ratios in right triangles are properties of the angles in the triangle, leading to definitions of trigonometric ratios for acute angles   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.3.7   | Explain and use the relationship between the sine and cosine of complementary angles  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.3.8   | Use trigonometric ratios and the Pythagorean Theorem to solve right triangles in applied problems   |                  |             |                 |      |                  |                  |
|       | Cluster 4   | <b>Apply trigonometry to general triangles</b>             |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.4.9   | (+) Derive the formula $A = \frac{1}{2} ab \sin(C)$ for the area of a triangle by drawing an auxiliary line from a vertex perpendicular to the opposite side  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.4.10  | (+) Prove the Law of Sines and Cosines and use them to solve problems   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-SRT.4.11  | (+) Understand and apply the Law of Sines and the Law of Cosines to find unknown measurements in right and non-right triangles (e.g., surveying problems, resultant forces)   |                  |             |                 |      |                  |                  |
| G.C   | <b>Circles</b>  |  |   |                  |             |                 |      |                  |                  |
|       | Cluster 1   | <b>Understand and apply theorems about circles</b>         |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-C.1.1   | Prove that all circles are similar  |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-C.1.2   | Identify and describe relationships among inscribed angles, radii, and chords. Include the relationship between central, inscribed, and circumscribed angles; inscribed angles on a diameter are right angles; the radius of a circle is perpendicular to the tangent where the radius intersects the circle                |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-C.1.3   | Construct the inscribed and circumscribed circles of a triangle, and prove properties of angles for a quadrilateral inscribed in a circle   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-C.1.4   | (+) Construct a tangent line from a point outside a given circle to the circle  |                  |             |                 |      |                  |                  |
|       | Cluster 2   | <b>Find arc lengths and areas of sectors of circles</b>    |   |                  |             |                 |      |                  |                  |
|       |   | MACC.912.G-C.2.5   | Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector   |                  |             |                 |      |                  |                  |
| G.GPE | <b>Expressing Geometric Properties with Equations</b> |  |   |                  |             |                 |      |                  |                  |
|       | Cluster 1   | <b>Translate between the geometric description and the</b> |   |                  |             |                 |      |                  |                  |

| S.IC  |                    | <b>Making Inferences and Justifying Conclusions</b>         |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Understand and evaluate random processes underlying</b>  |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.1.1   | Understand statistics as a process for making inferences about population parameters based on a random sample from that population   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.1.2   | Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?  |                  |             |                 |      |                  |                  |
|       | Cluster 2          | <b>Make inferences and justify conclusions from sample</b>  |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.3   | Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.4   | Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.5   | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-IC.2.6   | Evaluate reports based on data   |                  |             |                 |      |                  |                  |
| S.CP  |                    | <b>Conditional Probability and the Rules of Probability</b> |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Understand independence and conditional probability</b>  |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.1   | Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not")   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.2   | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities, and use this characterization to determine if they are independent  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.3   | Understand the conditional probability of A given B as $P(A B)$ and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A, and the conditional probability of B given A is the same as the probability of B  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.1.4   | Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|---|--|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.912.S-CP.1.5   | Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer   |                  |             |                 |      |                  |                  |
|       | Cluster 2          | <b>Use the rules of probability to compute probabilities of</b> |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.6   | Find the conditional probability of A given B as the fraction of B's outcomes that also belong to A, and interpret the answer in terms of the model  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.7   | Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$ , and interpret the answer in terms of the model   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.8   | (+) Apply the general Multiplication Rule in a uniform probability model, $P(A \text{ and } B) = P(A)P(B A) = P(B)P(A B)$ , and interpret the answer in terms of the model   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-CP.2.9   | (+) Use permutations and combinations to compute probabilities of compound events and solve problems   |                  |             |                 |      |                  |                  |
| S.MD  |                    | <b>Using Probability to Make Decisions</b>                      |  |                  |             |                 |      |                  |                  |
|       | Cluster 1          | <b>Calculate expected values and use them to solve</b>          |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-MD.1.1   | (+) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions   |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-MD.1.2   | (+) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-MD.1.3   | (+) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-MD.1.4   | (+) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?                     |                  |             |                 |      |                  |                  |
|       | Cluster 2          | <b>Use probability to evaluate outcomes of decisions</b>        |  |                  |             |                 |      |                  |                  |
|       |                    | MACC.912.S-MD.2.5   | (+) Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values  |                  |             |                 |      |                  |                  |
|       | MACC.912.S-MD.2.5  | MACC.912.S-MD.2.5.a   | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant   |                  |             |                 |      |                  |                  |

| State | Parent Standard ID                   | Standard ID   | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |  |

|       |                                      | MACC.912.S-MD.2.5.b   | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.   |                  |             |                 |      |                  |                  |  |
|       |                                      | MACC.912.S-MD.2.6   | (*) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).  |                  |             |                 |      |                  |                  |  |
|       |                                      | MACC.912.S-MD.2.7   | (*) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).   |                  |             |                 |      |                  |                  |  |
| A.SSE | <b>Domain: MATHEMATICAL PRACTICE</b> |   |   |                  |             |                 |      |                  |                  |  |
|       | Cluster 1                            | <b>Make sense of problems and persevere in solving them.</b>  |   |                  |             |                 |      |                  |                  |  |
|       |                                      | MACC.K12.MP.1.1   | Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. |                  |             |                 |      |                  |                  |  |
|       | Cluster 2                            | <b>Reason abstractly and quantitatively.</b>                  |   |                  |             |                 |      |                  |                  |  |
|       |                                      | MACC.K12.MP.2.1   | Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand, considering the units involved, attending to the meaning of quantities, not just how to compute them, and  |                  |             |                 |      |                  |                  |  |
|       | Cluster 3                            | <b>Construct viable arguments and critique the reasoning.</b> |   |                  |             |                 |      |                  |                  |  |

|       |                    | MACC.K12.MP.3.1                             | Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or                                   |                  |             |                 |      |                  |                  |  |

|       |                    | MACC.K12.MP.4.1                             | Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their |                  |             |                 |      |                  |                  |  |
|       | Cluster 5          | <b>Use appropriate tools strategically.</b> |  |                  |             |                 |      |                  |                  |  |

|       |                    | MACC.K12.MP.5.1                            | Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 6          | <b>Attend to precision.</b>                |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.6.1                            | Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.  |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 7          | <b>Look for and make use of structure.</b> |   |                  |             |                 |      |                  |                  |  |  |

|-------|--------------------|---|---|------------------|-------------|-----------------|------|------------------|------------------|--|--|
|       |                    | MACC.K12.MP.7.1   | Look for and make use of structure. Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression $x + 9x + 14$ , older students can see the $14$ as $2 \times 7$ and the $9$ as $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as |                  |             |                 |      |                  |                  |  |  |
|       | Cluster 8          | <b>Look for and express regularity in repeated reasoning.</b> |   |                  |             |                 |      |                  |                  |  |  |
|       |                    | MACC.K12.MP.8.1   | Look for and express regularity in repeated reasoning. Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing $25$ by $11$ that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through $(1, 2)$ with slope $3$ , middle school students might abstract the equation $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding $(x - 1)(x + 1)$ , $(x - 1)(x + 1)$ , and $(x - 1)(x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain              |                  |             |                 |      |                  |                  |  |  |

|       |                    | MACC.912.S-IC.2.4 | Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling  | Introduction to Probability and Statistics<br>Unit 2: Population and Measures of Central Tendency | • Measures of Central Tendency Pgs 1 - 11<br>In a text based lesson with interactive student practice problems, students find sample means and use them to estimate the population mean.   | • Unit 2 Assignment: Measures of Central Tendency - Part 1<br>• Unit 2 Test: Population and Measures of Central Tendency<br>Using multiple choice questions, students find sample means as a way of estimating the population mean.                        | 348854           |                  |                  |
|       |                    | MACC.912.S-IC.2.5 | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant   | Introduction to Probability and Statistics<br>Unit 3: Collecting Statistical Data                 | • Experiments Pgs 3-5<br>In the activity after this lesson, students randomly choose 150 students from their school and survey them to find out their average calorie intake and whether or not they listen to music while eating.   | • Unit 3 Activity: Designing an Experiment<br>Using the defined experiment, students will decide whether or not listening to music while one eats is significant to the number of calories taken in.   | 348865           |                  |                  |
|       |                    | MACC.912.S-CP.1.1 | Describe events as subsets of a sample space (the set of outcomes, or as unions, intersections, or complements of other events ("or," "and," "not")  | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability                      | • Simple Probabilities and Random Variables Pg 2<br>In a text based lesson with practice problems, students will verify that the complement of a particular event is the event that the original doesn't happen and that the probability of such an event is 1 minus the probability of the original event.                | • Unit 3 Assignment: Probability<br>• Unit 3 Test: Probability<br>Using multiple choice questions, students find probabilities that particular events will not happen.   | 348874           |                  |                  |
|       |                    | MACC.912.S-CP.1.2 | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities, and use this characterization to determine if they are independent  | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability                      | • Compound Events and Joint Probabilities Pg 4<br>• Gizmo: Compound Independent and Dependent Events Pg 1<br>Through a text based lesson with practice problems and an interactive online animation, students will compute the probability of independent events by finding the product of their individual probabilities. | • Unit 5 Assignment: Simple Probability<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice questions, students will compute the probability of independent events.  | 348880<br>348882 |                  |                  |
|       |                    | MACC.912.S-CP.1.3 | Understand the conditional probability of A given B as $P(A B) = \frac{P(A \cap B)}{P(B)}$ , and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A, and the conditional probability of B given A is the same as the probability of B   | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability                      | • Compound Events and Joint Probabilities Pg 4<br>In a text based lesson with student practice problems, students will identify independent events as events A and B such that $P(A B) = P(A)$ and $P(B A) = P(B)$ .   | • Unit 5 Assignment: Simple Probability<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice questions, students will compute the probability of independent events.  | 348880           |                  |                  |
|       |                    | MACC.912.S-CP.1.4 | Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability                      | • Compound Events: Conditional Probability and Two-Way Contingency Table Pgs 1-2<br>In a text based lesson with student practice problems, students will use two-way frequency tables using a table to calculate various probabilities from the table.   | • Unit 5 Assignment: Simple Probability<br>• Unit 5 Assignment: Conditional Probabilities and 2-Way Tables<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice problems students compute probabilities from two-way frequency tables.      | 348883           |                  |                  |
|       |                    | MACC.912.S-CP.1.5 | Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer   | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability                      | • Compound Events: Conditional Probability and Two-Way Contingency Table Pgs 1-2<br>Through a text based lesson with student practice problems, students will calculate various probabilities from the table.  | • Unit 5 Assignment: Simple Probability<br>• Unit 5 Assignment: Conditional Probabilities and 2-Way Tables<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice problems students will compute probabilities from two-way frequency tables. | 348883           |                  |                  |

| State | Parent Standard ID | Standard ID       | State Standard Description  | Course/Unit Name  | Lesson Name   | Assessment Name  | RSID             | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|-------------------|---|---|---|--|------------------|------------------|------------------|
|       |                    | MACC.912.S-CP.2.6 | Find the conditional probability of A given B as the fraction of B's outcomes that also belong to A, and interpret the answer in terms of the model   | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability  | • Compound Events: Conditional Probability and Two-Way Contingency Table Pgs 1-2<br>Through a text based lesson with student practice problems, students will calculate various probabilities from the table. For example, the probability that a female smoker is either single or widowed or the probability that a widowed smoker is male. | • Unit 5 Assignment: Simple Probability<br>• Unit 5 Assignment: Conditional Probabilities and 2-Way Tables<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice problems students are asked to compute probabilities from two-way frequency tables.   | 348883           |                  |                  |
|       |                    | MACC.912.S-CP.2.7 | Apply the Addition Rule, $P(A \cup B) = P(A) + P(B) - P(A \cap B)$ , and interpret the answer in terms of the model   | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability  | • Compound Events and Joint Probabilities Pgs 5-7<br>In a text based lesson with student practice problems, students will use the Addition Rule formula and to compute the probability of A or B for either mutually exclusive or dependent events.   | • Unit 5 Assignment: Compound Events Assignment<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice problems, students will compute P(A or B) for both mutually exclusive and dependent events.  | 348880           |                  |                  |
|       |                    | MACC.912.S-CP.2.8 | (+) Apply the general Multiplication Rule in a uniform probability model $P(A \cap B) = P(A)P(B A) = P(B)P(A B)$ , and interpret the answer in terms of the model   | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability  | • Compound Events and Joint Probabilities Pg 3<br>In a text based lesson with student practice problems, students will use the multiplication rule to find the probability of compound events, both dependent and independent events.   | • Unit 5 Assignment: Compound Events Assignment<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice problems, students demonstrate the ability to compute P(A and B) for both mutually exclusive and dependent events.   | 348880           |                  |                  |
|       |                    | MACC.912.S-CP.2.9 | (+) Use permutations and combinations to compute probabilities of compound events and solve problems  | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability  | • Compound Events with Permutations and Combinations Pgs 1-2<br>In a text based lesson with student practice problems, students will use permutations and combinations to count the number of elements in a sample space and the number or successful events to find the probability of compound events.                                      | • Unit 5 Assignment: Compound Events with Permutations and Combinations Assignment<br>• Unit 5 Test: Elementary Probabilities<br>Using multiple choice questions, students will use permutations and combinations to count the number of successful events and the total sample space to compute compound probabilities.   | 348881           |                  |                  |
|       |                    | MACC.912.S-MD.1.1 | (+) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays for data distributions | Introduction to Probability and Statistics<br>Unit 3: Collecting Statistical Data<br>Unit 5: Elementary Probability | • Sampling Pg 2<br>• Experiments Pg 4<br><br>• Probability Distribution Pgs 1-2<br>Through text based lessons with student practice problems, students will assign numerical values to events for the purpose of randomization of those events and create graphical displays of probability distributions of these events.                    | • Unit 3 Activity: Designing an Experiment<br>348861<br>348865<br><br>Using a free response worksheet activity, students design an experiment by taking a random sample of 150 from a larger population. The randomization is accomplished by assigning each member of the population a numerical value, then choosing the 150 lowest values. A graphical analysis is made according to the experimental design.<br>348875 | 348861<br>348865 |                  |                  |
|       |                    | MACC.912.S-MD.1.2 | (+) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution   | Introduction to Probability and Statistics<br>Unit 6: Applications of Probability and Statistics                    | • Decision Making Using Expected Value Pgs 2-3, 5<br>In a text based lesson with student practice problems, students will calculate expected values.  | • Unit 6 Assignment: Expected Value Assignment<br>• Unit 6 Test: Introduction to Applications of Probability and Statistics<br>Using multiple choice questions, students calculate expected values of random variables.  | 348886           |                  |                  |

| State           | Parent Standard ID | Standard ID       | State Standard Description  | Course/Unit Name   | Lesson Name  | Assessment Name  | RSID   | Bloom's Expected | Bloom's Achieved |
|-----------------|--------------------|-------------------|---|--|--|--|--------|------------------|------------------|
|                 |                    | MA.912.S-MD.1.3   | (+) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes. | Introduction to Probability and Statistics<br>Unit 6: Applications of Probability and Statistics | * Decision Making Using Expected Value Pg 3<br>In a text based lesson with student practice problems, students will compute the expected value of randomly guessing on a multiple choice test and make recommendations based on the outcome.                                 | * Unit 6 Assignment: Expected Value Assignment<br>* Unit 6 Test: Introduction to Applications of Probability and Statistics<br><br>Using multiple choice questions, students calculate expected values of random variables and make predictions based on these values. | 348886 |                  |                  |
|                 |                    | MA.912.S-MD.1.4   | (+) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?                      | Introduction to Probability and Statistics<br>Unit 6: Applications of Probability and Statistics | * Decision Making Using Expected Value Pg 5<br>In a text based lesson using student practice problems, students are given the results of a random variable. They will use these results to create an expected value, then use the expected value to make a prediction.       | * Unit 6 Assignment: Expected Value Assignment<br>* Unit 6 Test: Introduction to Applications of Probability and Statistics<br><br>Using multiple choice questions, students calculate expected values of random variables and make predictions based on these values. | 348886 |                  |                  |
| MA.912.S-MD.2.5 |                    | MA.912.S-MD.2.5.a | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant  | Introduction to Probability and Statistics<br>Unit 6: Applications of Probability and Statistics | * Decision Making Using Expected Value Pg 2<br>In a text based lesson with student practice problems, students will calculate the expected value of several games of chance.   | * Unit 6 Assignment: Expected Value Assignment<br>* Unit 6 Test: Introduction to Applications of Probability and Statistics<br><br>Using multiple choice questions, students calculate expected values of random variables and make predictions based on these values. | 348886 |                  |                  |
|                 |                    | MA.912.S-MD.2.5.b | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident  | Introduction to Probability and Statistics<br>Unit 6: Applications of Probability and Statistics | * Decision Making Using Expected Value Pg 3<br>Through a text based lesson with student practice, students will evaluate the risk of purchasing low deductible auto insurance based on the cost of such insurance and the probability of an accident for a teenage driver.   | * Unit 6 Assignment: Expected Value Assignment<br>* Unit 6 Test: Introduction to Applications of Probability and Statistics<br><br>Using multiple choice questions, students calculate expected values of random variables and make predictions based on these values. | 348886 |                  |                  |
|                 |                    | MA.912.S-MD.2.6   | (+) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator)   | Introduction to Probability and Statistics<br>Unit 6: Applications of Probability and Statistics | * Decision Making Using Expected Value Pg 1<br>In a text based lesson with student practice problems, students will use simple random number generators (flipping a coin or rolling a die) to make both fair and biased decisions based on the stipulations of the problems. | * Unit 6 Assignment: Expected Value Assignment<br>* Unit 6 Test: Introduction to Applications of Probability and Statistics<br><br>Using multiple choice questions, students calculate expected values of random variables and make predictions based on these values. | 348886 |                  |                  |
|                 |                    | MA.912.S-MD.2.7   | (+) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game)  | Introduction to Probability and Statistics<br>Unit 5: Elementary Probability                     | * The Monty Hall Problem, Pgs 1-2<br>In a text and multimedia based lesson, students will use a classic problem to learn the result of various decisions that can be made when the probability of success is not immediately obvious.  | * Unit 5 Activity: The Monty Hall Problem<br><br>Using a free response worksheet activity, students analyze the outcome of a classic problem using complementary strategies.   | 348877 |                  |                  |

Students are encouraged to notice the pattern that emerges as the degree of the polynomial increases. Students sketch graphs of polynomial functions using the roots and understanding of the impact of the leading coefficient to determine end behavior.</p> | 122292 | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 2 Assignment: Polynomial Functions and their Real Zeros   |
| MA.912.A.4.6 | Use theorems of polynomial behavior (including but not limited to the Fundamental Theorem of Algebra, Remainder Theorem, the Rational Root Theorem, Descartes' Rule of Signs, and the Conjugate Root Theorem) to find the zeros of a polynomial function. | 339456<br>339457<br>352346 | <p><b>Where the standard is taught:</b> Pre-Calculus A, Unit 2 Polynomial and Rational Functions, Lessons: Polynomial Functions, Real Zeros of Polynomial Functions, Complex Roots and the Fundamental Theorem of Algebra</p> <p><b>How the standard is taught:</b> This standard is taught by introducing the Intermediate Value Theorem, Rational Zero theorem, Descartes' Rule of Signs, Complex Conjugates Theorem, and the Fundamental Theorem of Algebra. Each of these theorems is explained and examples used to show the processes used to find the zeroes of polynomials.</p>        | 122292 | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 2 Assignment: Polynomial Functions and their Real Zeros   |
| MA.912.A.4.7 | Write a polynomial equation for a given set of real and/or complex roots.   | 352346                     | <p><b>Where the standard is taught:</b> Pre-Calculus A, Unit 2 Polynomial and Rational Functions, Lesson: Complex Roots and the Fundamental Theorem of Algebra</p> <p><b>How the standard is taught:</b> This standard is taught by connecting the complete linear factorization theorem to the concepts of roots. Students are shown through a text and example based lesson how to substitute the roots and simplify the expression to find a polynomial function with the roots.</p>  | 122607 | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 2 Assignment: Complex Roots, the Fundamental Theorem of Algebra, and Graphs of Rational Functions |

|   |  |                                      |  |                  |   |
|---|--|--------------------------------------|--|------------------|---|
| MA.912.A.4.8                              | Describe the relationships among the solutions of an equation, the zeros of a function, the x-intercepts of a graph, and the factors of a polynomial expression with and without technology. | 339456<br>339457                     | <p><b>Where the standard is taught:</b> Pre-Calculus A, Unit 2 Polynomial and Rational Functions, Lessons: Polynomial Functions and Real Zeros of Polynomial Functions</p> <p><b>How the standard is taught:</b> This standard is taught through text and graphics based lessons that allow students to discover the inter-relationships between solutions, zeros, x-intercepts, and factors of a polynomial expression through direct instruction and examples.</p>   | 122292           | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 2 Assignment: Polynomial Functions and their Real Zeros   |
| <b>Rational Expressions and Equations</b> |  |                                      |  |                  |   |
| MA.912.A.5.6                              | Identify removable and non-removable discontinuities, and vertical, horizontal, and oblique asymptotes of a graph of a rational function, find the zeros, and graph the function.            | 339461                               | <p><b>Where the standard is taught:</b> Pre-Calculus A, Unit 2 Polynomial and Rational Functions, Lesson: Rational Functions and Their Graphs</p> <p><b>How the standard is taught:</b> This standard is taught by allowing students to discover the general shape of the graph of a rational equation by using the big-little principle. Students then graph rational equations using this principle. The lesson continues with a discussion of vertical, horizontal, and oblique asymptotes and methods to find these asymptotes.</p>  | 122607           | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 2 Assignment: Complex Roots, the Fundamental Theorem of Algebra, and Graphs of Rational Functions |
| <b>Conic Sections</b>                     |  |                                      |  |                  |   |
| MA.912.A.9.1                              | Write the equations of conic sections in standard form and general form, in order to identify the conic section and to find its geometric properties (foci, asymptotes, eccentricity, etc.). | 339487<br>339488<br>339490<br>339491 | <p><b>Where the standard is taught:</b> Pre-Calculus A, Unit 4 Topics from Analytic Geometry, Lessons: Circles, Parabolas, Ellipses, and Hyperbolas</p> <p><b>How the standard is taught:</b> This lesson is taught through a series of lessons, each dedicated to a single conic section. Students are introduced to the conic section, the equations in standard and general form, the geometric properties, and the graph of the conic section. These pieces of information are connected, allowing students to see how the geometric properties relate to both the equations and graphs of the conic sections.</p> | 122017<br>122018 | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 4 Assignment: Circles and Parabolas and Unit 4 Assignment: Ellipses and Hyperbolas                |

|   |  |                                      |   |                  |  |
|---|--|--------------------------------------|---|------------------|--|
| MA.912.A.9.2                                  | Graph conic sections with and without using graphing technology.   | 339487<br>339488<br>339490<br>339491 | <b>Where the standard is taught:</b> Pre-Calculus A, Unit 4 Topics from Analytic Geometry, Lessons: Circles, Parabolas, Ellipses, and Hyperbolas<br><b>How the standard is taught:</b> This lesson is taught through a series of lessons, each dedicated to a single conic section. Students are introduced to the conic section, the equations in standard and general form, the geometric properties, and the graph of the conic section. Students graph conic sections using information gleaned from the equations. | 122017<br>122018 | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 4 Assignment: Circles and Parabolas and Unit 4 Assignment: Ellipses and Hyperbolas |
| MA.912.A.9.3                                  | Solve real-world problems involving conic sections   | 350747                               | <b>Where the standard is taught:</b> Pre-Calculus A, Unit 4 Topics from Analytic Geometry, Lesson: Applications of Conic Sections<br><b>How the standard is taught:</b> This standard is taught by showing examples of how conic sections model real-world phenomena, such as the construction of telescopes and orbit of planets.  | 122017<br>122018 | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 4 Assignment: Circles and Parabolas and Unit 4 Assignment: Ellipses and Hyperbolas |
| <b>Domain: Reading Standards for Literacy</b> |  |                                      |   |                  |  |
| <b>Craft and Structure</b>                    |  |                                      |   |                  |  |
| LACC.1112.RST.2.4                             | Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 11–12 texts and topics.                       | 340948                               | <b>Where the standard is taught:</b> Pre-Calculus B, Unit 2: Discrete Algebra: Sequences and Series, Lesson: Sequences and Summation Notation<br><b>How the standard is taught:</b> students are introduced to the standard sigma notation for finding sums and partial sums. The lesson includes show students the greek symbol sigma, the translation of the symbol, and the equation that the symbol represents.   | 120032           | <b>How mastery of the standard is assessed:</b> This standard is assessed using multiple choice questions in Unit 2 Assignment: Arithmetic and Geometric Sequences and Series.                       |
| <b>Integration of Knowledge and Ideas</b>     |  |                                      |   |                  |  |
| LACC.910.RST.3.7                              | Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words. | 340950                               | <b>Where the standard is taught:</b> Pre-Calculus B, Unit 2: Discrete Algebra: Sequences and Series, Lesson: Arithmetic Sequences and Series<br><b>How the standard is taught:</b> Students learn to draw a table of values for the terms in an arithmetic sequence. Students then learn to write the equation representing this situation. Students also learn how to express the equations for an arithmetic sequence in words.   | 120032           | <b>How mastery of the standard is assessed:</b> This standard is assessed through multiple choice questions in Unit 2 Assignment: Arithmetic and Geometric Sequences and Series                      |

|                   |   |                  |  |        |  |
|-------------------|---|------------------|--|--------|--|
| LACC.1112.RST.3.7 | Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem. | 335157<br>335163 | <b>Where the standard is taught:</b> Pre-Calculus B, Unit 3: Probability and Statistics, Lessons: The Mean and Measures of Variability.<br><b>How the standard is taught:</b> Through text and graphics based lessons, students learn to find the mean and standard deviation of a data set. This prepares them to research election results to record and analyze the data. | 122610 | <b>How mastery of the standard is assessed:</b> This standard is assessed through a written assignment, Mean and Standard Deviation Activity |

### BASIC INFORMATION

|                           |  |
|---------------------------|--|
| Course Title:             | Calculus   |
| Course Number:            | 1202300  |
| Course Abbreviated Title: | CALCULUS   |
| Course Path:              | Section: Grades PreK to 12 Education Courses » Grade Group: Grades 9 to 12 and Adult Education Courses » Subject: Mathematics » SubSubject: Calculus » |
| Number of Credits:        | One credit (1)   |
| Course length:            | Year (Y)   |
| Course Type:              | Core   |
| Course Level:             | 3  |
| Status:                   | Draft - Board Approval Pending   |
| Honors?                   | Yes  |

### STANDARDS (55)

|                                    |  |
|------------------------------------|--|
| <a href="#">LACC.910.RST.1.3:</a>  | Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks, attending to special cases or exceptions defined in the text.  |
| <a href="#">LACC.910.RST.2.4:</a>  | Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 9–10 texts and topics.  |
| <a href="#">LACC.910.RST.3.7:</a>  | Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words.   |
| <a href="#">LACC.910.SL.1.1:</a>   | <p>Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9–10 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.</p> <p>a. Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.</p> <p>b. Work with peers to set rules for collegial discussions and decision-making (e.g., informal consensus, taking votes on key issues, presentation of alternate views), clear goals and deadlines, and individual roles as needed.</p> <p>c. Propel conversations by posing and responding to questions that relate the current discussion to broader themes or larger ideas; actively incorporate others into the discussion; and clarify, verify, or challenge ideas and conclusions.</p>  |
|                                    | d. Respond thoughtfully to diverse perspectives, summarize points of agreement and disagreement, and, when warranted, qualify or justify their own views and understanding and make new connections in light of the evidence and reasoning presented.  |
| <a href="#">LACC.910.SL.1.2:</a>   | Integrate multiple sources of information presented in diverse media or formats (e.g., visually, quantitatively, orally) evaluating the credibility and accuracy of each source.   |
| <a href="#">LACC.910.SL.1.3:</a>   | Evaluate a speaker's point of view, reasoning, and use of evidence and rhetoric, identifying any fallacious reasoning or exaggerated or distorted evidence.  |
| <a href="#">LACC.910.SL.2.4:</a>   | Present information, findings, and supporting evidence clearly, concisely, and logically such that listeners can follow the line of reasoning and the organization, development, substance, and style are appropriate to purpose, audience, and task.  |
| <a href="#">MA.912.C.2.8:</a>      | Find second derivatives and derivatives of higher order.   |
| <a href="#">MA.912.C.2.9:</a>      | Find derivatives using logarithmic differentiation.  |
| <a href="#">MA.912.C.2.10:</a>     | Understand and use the relationship between differentiability and continuity.  |
| <a href="#">MA.912.C.2.11:</a>     | Understand and apply the Mean Value Theorem.   |
| <a href="#">LACC.910.WHST.1.1:</a> | <p>Write arguments focused on <i>discipline-specific content</i>.</p> <p>a. Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among the claim(s), counterclaims, reasons, and evidence.</p> <p>b. Develop claim(s) and counterclaims fairly, supplying data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form and in a manner that anticipates the audience's knowledge level and concerns.</p> <p>c. Use words, phrases, and clauses to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.</p> <p>d. Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.</p> <p>e. Provide a concluding statement or section that follows from or supports the argument presented.</p> |
| <a href="#">LACC.910.WHST.2.4:</a> | Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.   |
| <a href="#">LACC.910.WHST.3.9:</a> | Draw evidence from informational texts to support analysis, reflection, and research.  |
| <a href="#">MA.912.C.1.6:</a>      | Find limits at infinity.   |
| <a href="#">MA.912.C.1.7:</a>      | Decide when a limit is infinite and use limits involving infinity to describe asymptotic behavior.   |
| <a href="#">MA.912.C.1.8:</a>      | Find special limits such as  |
| <a href="#">MA.912.C.2.1:</a>      | Understand the concept of derivative geometrically, numerically, and analytically, and interpret the derivative as an instantaneous rate of change or as the slope of the tangent line.  |
| <a href="#">MA.912.C.2.2:</a>      | State, understand, and apply the definition of derivative.   |
| <a href="#">MA.912.C.2.3:</a>      | Find the derivatives of functions, including algebraic, trigonometric, logarithmic, and exponential functions.   |
| <a href="#">MA.912.C.2.4:</a>      | Find the derivatives of sums, products, and quotients.   |
| <a href="#">MA.912.C.2.5:</a>      | Find the derivatives of composite functions using the Chain Rule.  |
| <a href="#">MA.912.C.2.6:</a>      | Find the derivatives of implicitly-defined functions.  |
| <a href="#">MA.912.C.2.7:</a>      | Find derivatives of inverse functions.   |
| <a href="#">MA.912.C.3.1:</a>      | Find the slope of a curve at a point, including points at which there are vertical tangent lines and no tangent lines.   |

|                                |   |
|--------------------------------|---|
| <a href="#">MA.912.C.3.2:</a>  | Find an equation for the tangent line to a curve at a point and a local linear approximation.   |
| <a href="#">MA.912.C.3.3:</a>  | Decide where functions are decreasing and increasing. Understand the relationship between the increasing and decreasing behavior of $f$ and the sign of $f'$ .  |
| <a href="#">MA.912.C.3.4:</a>  | Find local and absolute maximum and minimum points.   |
| <a href="#">MA.912.C.3.5:</a>  | Find points of inflection of functions. Understand the relationship between the concavity of $f$ and the sign of $f''$ . Understand points of inflection as places where concavity changes.   |
| <a href="#">MA.912.C.3.6:</a>  | Use first and second derivatives to help sketch graphs. Compare the corresponding characteristics of the graphs of $f$ , $f'$ , and $f''$ .   |
| <a href="#">MA.912.C.3.7:</a>  | Use implicit differentiation to find the derivative of an inverse function.   |
| <a href="#">MA.912.C.3.8:</a>  | Solve optimization problems.  |
| <a href="#">MA.912.C.3.9:</a>  | Find average and instantaneous rates of change. Understand the instantaneous rate of change as the limit of the average rate of change. Interpret a derivative as a rate of change in applications, including velocity, speed, and acceleration.  |
| <a href="#">MA.912.C.3.10:</a> | Find the velocity and acceleration of a particle moving in a straight line.   |
| <a href="#">MA.912.C.3.11:</a> | Model rates of change, including related rates problems.  |
| <a href="#">MA.912.C.4.1:</a>  | Use rectangle approximations to find approximate values of integrals.   |
| <a href="#">MA.912.C.4.2:</a>  | Calculate the values of Riemann Sums over equal subdivisions using left, right, and midpoint evaluation points.   |
| <a href="#">MA.912.C.4.3:</a>  | Interpret a definite integral as a limit of Riemann sums.   |
| <a href="#">MA.912.C.4.4:</a>  | Interpret a definite integral of the rate of change of a quantity over an interval as the change of the quantity over the interval. That is, $\int_a^b f'(x) dx = f(b) - f(a)$ (Fundamental Theorem of Calculus).   |
| <a href="#">MA.912.C.4.5:</a>  | Use the Fundamental Theorem of Calculus to evaluate definite and indefinite integrals and to represent particular antiderivatives. Perform analytical and graphical analysis of functions so defined.   |
| <a href="#">MA.912.C.4.6:</a>  | Use these properties of definite integrals:<br>$\int_a^b [f(x) + g(x)] dx = \int_a^b f(x) dx + \int_a^b g(x) dx$<br>$\int_a^b k \cdot f(x) dx = k \int_a^b f(x) dx$<br>$\int_a^a f(x) dx = 0$<br>$\int_a^b f(x) dx = - \int_b^a f(x) dx$<br>$\int_a^b f(x) dx + \int_b^c f(x) dx = \int_a^c f(x) dx$<br>$\int_a^b f(x) dx = \int_a^c f(x) dx + \int_c^b f(x) dx$<br>If $f(x) \leq g(x)$ on $[a, b]$ , then $\int_a^b f(x) dx \leq \int_a^b g(x) dx$ |
| <a href="#">MA.912.C.4.7:</a>  | Use integration by substitution (or change of variable) to find values of integrals.  |
| <a href="#">MA.912.C.4.8:</a>  | Use Riemann Sums, the Trapezoidal Rule, and technology to approximate definite integrals of functions represented algebraically, geometrically, and by tables of values.  |

|                               |  |
|-------------------------------|--|
| <a href="#">MA.912.C.5.1:</a> | Find specific antiderivatives using initial conditions, including finding velocity functions from acceleration functions, finding position functions from velocity functions, and solving applications related to motion along a line.   |
| <a href="#">MA.912.C.5.5:</a> | Use definite integrals to find the area between a curve and the x-axis or between two curves.  |
| <a href="#">MA.912.C.5.7:</a> | Use definite integrals to find the volume of a solid with known cross-sectional area, including solids of revolution.  |
| <a href="#">MA.912.C.5.8:</a> | Apply integration to model, and solve problems in physical, biological, and social sciences.   |
| <a href="#">MA.912.C.5.8:</a> | <b>Make sense of problems and persevere in solving them.</b><br><br>Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches. |
| <a href="#">MA.912.C.5.8:</a> | <b>Reason abstractly and quantitatively.</b><br><br>Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.  |
| <a href="#">MA.912.C.5.8:</a> | <b>Construct viable arguments and critique the reasoning of others.</b><br><br>Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.   |
| <a href="#">MA.912.C.5.8:</a> | <b>Model with mathematics.</b>   |

|                                  |  |
|----------------------------------|--|
|                                  | <p>Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another.</p> <p>Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.</p>   |
| <a href="#">MACC.K12.MP.5.1:</a> | <p><b>Use appropriate tools strategically.</b></p> <p>Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.</p> |
| <a href="#">MACC.K12.MP.6.1:</a> | <p><b>Attend to precision.</b></p> <p>Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.</p>  |
| <a href="#">MACC.K12.MP.7.1:</a> | <p><b>Look for and make use of structure.</b></p> <p>Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see <math>7 \times 8</math> equals the well remembered <math>7 \times 5 + 7 \times 3</math>, in preparation for learning about the distributive property. In the expression <math>x^2 + 9x + 14</math>, older students can see the 14 as <math>2 \times 7</math> and the 9 as <math>2 + 7</math>. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see <math>5 - 3(x - y)^2</math> as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers <math>x</math> and <math>y</math>.</p>  |
| <a href="#">MACC.K12.MP.8.1:</a> | <p><b>Look for and express regularity in repeated reasoning.</b></p>   |
|                                  | <p>Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation <math>(y - 2)/(x - 1) = 3</math>. Noticing the regularity in the way terms cancel when expanding <math>(x - 1)(x + 1)</math>, <math>(x - 1)(x^2 + x + 1)</math>, and <math>(x - 1)(x^3 + x^2 + x + 1)</math> might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.</p>   |

#### RELATED GLOSSARY TERM DEFINITIONS (58)

|                                      |  |
|--------------------------------------|--|
| <b>Approximate:</b>                  | A number or measurement that is close to or near its exact value.  |
| <b>Area:</b>                         | The number of square units needed to cover a surface.  |
| <b>Asymptote:</b>                    | A straight line associated with a curve such that as a point moves along an infinite branch of the curve the distance from the point to the line approaches zero and the slope of the curve at the point approaches the slope of the line. |
| <b>Axes:</b>                         | The horizontal and vertical number lines used in a coordinate plane system.  |
| <b>Concave:</b>                      | Defines a shape that curves inward; opposite of convex.  |
| <b>Cone:</b>                         | A pyramid with a circular base.  |
| <b>Dimension:</b>                    | The number of coordinates used to express a position.  |
| <b>Equal:</b>                        | Having the same value (=).   |
| <b>Equation:</b>                     | A mathematical sentence stating that the two expressions have the same value. Also read the definition of equality.  |
| <b>Equilateral triangle:</b>         | A triangle with three congruent sides.   |
| <b>Estimate:</b>                     | Is an educated guess for an unknown quantity or outcome based on known information. An estimate in computation may be found by rounding, by using front-end digits, by clustering, or by using compatible numbers to compute.              |
| <b>Estimation:</b>                   | The use of rounding and/or other strategies to determine a reasonably accurate approximation, without calculating an exact answer.   |
| <b>Expression:</b>                   | A mathematical phrase that contains variables, functions, numbers, and/or operations. An expression does not contain equal or inequality signs.  |
| <b>Height:</b>                       | A line segment extending from the vertex or apex of a figure to its base and forming a right angle with the base or plane that contains the base.  |
| <b>Implicit Differentiation:</b>     | Is the procedure of differentiating an implicitly defined function with respect to the desired variable $x$ while treating the other variables as unspecified functions of $x$ .   |
| <b>Infinite:</b>                     | Has no end or goes on forever, not finite. A set is infinite if it can be placed in one-to-one correspondence with a proper subset of itself.  |
| <b>Instantaneous Rate of Change:</b> | The rate of change at a particular moment. For a function, the instantaneous rate of change at a point is the same as the slope of the tangent line at that point.   |
| <b>Integral:</b>                     | Integer valued.  |

|                                     |  |
|-------------------------------------|--|
| <b>Interval:</b>                    | The set of all real numbers between two given numbers. The two numbers on the ends are the endpoints. If the endpoints, $a$ and $b$ are included, the interval is called closed and is denoted $[a, b]$ . If the endpoints are not included, the interval is called open and denoted $(a, b)$ . If one endpoint is included but not the other, the interval is denoted $[a, b)$ or $(a, b]$ and is called a half-closed (or half-open interval).   |
| <b>Length:</b>                      | A one-dimensional measure that is the measurable property of line segments.  |
| <b>Line:</b>                        | A collection of an infinite number of points in a straight pathway with unlimited length and having no width.  |
| <b>Local Maximum:</b>               | The highest point in a particular section of a graph.  |
| <b>Local Minimum:</b>               | The lowest point in a particular section of a graph.   |
| <b>Logarithmic Differentiation:</b> | The taking of the logarithm of both sides of an equation before differentiating.   |
| <b>Mean:</b>                        | There are several statistical quantities called means, e.g., harmonic mean, arithmetic mean, and geometric mean. However, $\bar{x}$ commonly refers to the arithmetic mean that is also called arithmetic average. Arithmetic mean is a mathematical representation of the typical value of a series of numbers, computed as the sum of all the numbers in the series divided by the count of all numbers in the series. Arithmetic mean is the balance point if the numbers are considered as weights on a beam.  |
| <b>Model:</b>                       | To represent a mathematical situation with manipulatives (objects), pictures, numbers or symbols.  |
| <b>Origin:</b>                      | The point of intersection of the $x$ - and $y$ -axes in a rectangular coordinate system, where the $x$ -coordinate and $y$ -coordinate are both zero. On a number line, the origin is the 0 point. In three dimensions, the origin is the point $(0, 0, 0)$ .  |
| <b>Perimeter:</b>                   | The distance around a two dimensional figure.  |
| <b>Point:</b>                       | A specific location in space that has no discernable length or width.  |
| <b>Points of Inflection:</b>        | See Inflection points.   |
| <b>Product:</b>                     | The result of multiplying numbers together.  |
| <b>Quotient:</b>                    | The result of dividing two numbers.  |
| <b>Radius:</b>                      | A line segment extending from the center of a circle or sphere to a point on the circle or sphere. Plural radii.   |
| <b>Rate:</b>                        | A ratio that compares two quantities of different units.   |
| <b>Rate of change:</b>              | The ratio of change in one quantity to the corresponding change in another quantity.   |
| <b>Rectangle:</b>                   | A parallelogram with four right angles.  |
| <b>Representations:</b>             | Physical objects, drawings, charts, words, graphs, and symbols that help students communicate their thinking.  |
| <b>Rule:</b>                        | A general statement written in numbers, symbols, or words that describes how to determine any term in a pattern or relationship. Rules or generalizations may include both recursive and explicit notation. In the recursive form of pattern generalization, the rule focuses on the rate of change from one element to the next. Example: Next = Now + 2; Next = Now $\times$ 4. In the explicit form of pattern generalization, the formula or rule is related to the order of the terms in the sequence and focuses on the relationship between the independent variable and the dependent variable. For example: $y=5t - 3$ Words may also be used to write a rule in recursive or explicit notation. Example: to find the total fee, multiply the total time with 3; take the previous number and add two to get the next number. |
| <b>Square:</b>                      | A rectangle with four congruent sides; also, a rhombus with four right angles.   |
| <b>Sum:</b>                         | The result of adding numbers or expressions together.  |
| <b>Table:</b>                       | A data display that organizes information about a topic into categories using rows and columns.  |
| <b>Variable:</b>                    | Any symbol, usually a letter, which could represent a number. A variable might vary as in $f(x)=2x+1$ , or a variable might be fixed as in $2x+1=5$ .  |
| <b>Chain Rule:</b>                  | A method for finding the derivative of a composition of functions. The formula is  |
| <b>Derivative:</b>                  | The limit of the ratio of the change in a function to the corresponding change in its independent variable as the latter change approaches zero.<br>Derivative of $f(x)$ at $x=a$ is $f'(a)$   |

|   |   |
|---|---|
| <b>Exponential Function:</b>            | A function of the form $y = ab^{cx+d} + e$ , where $a, b, c, d, e, x$ are real numbers, $a, b, c$ are nonzero, $b \neq 1$ , and $b > 0$ .   |
| <b>Function:</b>                        | A relation in which each value of $x$ is paired with a unique value of $y$ . More formally, a function from $A$ to $B$ is a relation $f$ such that every $a \in A$ is uniquely associated with an object $f(a) \in B$ .   |
| <b>Fundamental Theorem of Calculus:</b> | If $f$ is continuous on the closed interval $[a, b]$ and $F$ is the antiderivative (indefinite integral) of $f$ on $[a, b]$ , then  |
| <b>Indefinite Integral:</b>             | The set of all antiderivatives of a function, denoted by $\int$   |
| <b>Limit:</b>                           | A number to which the terms of a sequence get closer so that beyond a certain term all terms are as close as desired to that number. A function $f(x)$ is said to have a limit $L$ if, for all $\epsilon > 0$ , there exists a $\delta > 0$ such that whenever $x$ is within $\delta$ of $a$ , $f(x)$ is within $\epsilon$ of $L$ .                         |
| <b>Mean Value Theorem:</b>              | Let $f(x)$ be differentiable on the open interval $(a, b)$ and continuous on the closed interval $[a, b]$ . Then there is at least one point $c$ in $(a, b)$ such that $f'(c) = \frac{f(b) - f(a)}{b - a}$ . The theorem states that the tangent line to the function $f(x)$ at $x=c$ is parallel to the line passing through $(a, f(a))$ and $(b, f(b))$ . |
| <b>Slope:</b>                           | The ratio of change in the vertical axis ( $y$ -axis) to each unit change in the horizontal axis ( $x$ -axis) in the form rise/run or $\Delta y / \Delta x$ . Also the constant, $m$ , in the linear equation for the slope-intercept form $y = mx + b$ , where   |
| <b>Velocity:</b>                        | The time rate at which a body changes its position vector; quantity expressed by direction and magnitude in units of distance over time.  |
| <b>Vertex:</b>                          | The point common to the two rays that form an angle; the point common to any two sides of a polygon; the point common to three or more edges of a polyhedron.   |
| <b>Volume:</b>                          | A measure of the amount of space an object takes up; also the loudness of a sound or signal.  |
| <b>Weight:</b>                          | The force with which a body is attracted to Earth or another celestial body, equal to the product of the mass of the object and the acceleration of gravity.  |
| <b>Width:</b>                           | The shorter length of a two-dimensional figure. The width of a box is the horizontal distance from side to side (usually defined to be greater than the depth, the horizontal distance from front to back).   |
| <b>x-axis:</b>                          | The horizontal number line on a rectangular coordinate system.  |
| <b>y-axis:</b>                          | The vertical number line on a rectangular coordinate system   |

| Alignment Document |                                   |  |  |   |  |  |                  |                  |                  |
|--------------------|-----------------------------------|--|--|---|--|--|------------------|------------------|------------------|
| State              | Parent Standard ID                | Standard ID  | State Standard Description   | Course/Unit Name  | Lesson Name  | Assessment Name  | RSID             | Bloom's Expected | Bloom's Achieved |
| CCMA<br>N.RN       | <b>The Real Number Systems</b>    |  |  |   |  |  |                  |                  |                  |
|                    | Cluster 1                         | <b>Extend the properties of exponents to rational exponents</b>            |  |   |  |  |                  |                  |                  |
|                    |                                   | MACC.912.N-RN.1.1  | Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. For example, we define $5^{1/3}$ to be the cube root of 5 because we want $(5^{1/3})^3 = 5^{(1/3) \cdot 3} = 5^1 = 5$ . |   |  |  |                  |                  |                  |
|                    |                                   | MACC.912.N-RN.1.2  | Rewrite expressions involving radicals and rational exponents using the properties of exponents.   |   |  |  |                  |                  |                  |
|                    | Cluster 2                         | <b>Use properties of rational and irrational numbers.</b>                  |  |   |  |  |                  |                  |                  |
|                    |                                   | MACC.912.N-RN.2.3  | Explain why the sum or product of two rational numbers is rational; that the sum of a rational number and an irrational number is irrational; and that the product of a nonzero rational number and an irrational number is irrational.  |   |  |  |                  |                  |                  |

|-------|---|---|--|--|--|--|------------------|------------------|------------------|
|       | Cluster 3   | <b>Perform operations on matrices and use matrices in applications</b>      |  |  |  |  |                  |                  |                  |
|       | MACC.912.N-VM.3.6   |   | (i) Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network.   |  |  |  |                  |                  |                  |
|       | MACC.912.N-VM.3.7   |   | (ii) Multiply matrices by scalars to produce new matrices, e.g., as when all the payoffs in a game are doubled.  |  |  |  |                  |                  |                  |
|       | MACC.912.N-VM.3.8   |   | (iii) Add, subtract, and multiply matrices of appropriate dimensions.  |  |  |  |                  |                  |                  |
|       | MACC.912.N-VM.3.9   |   | (iv) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties.   |  |  |  |                  |                  |                  |
|       | MACC.912.N-VM.3.10  |   | (v) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse.   |  |  |  |                  |                  |                  |
|       | MACC.912.N-VM.3.11  |   | (vi) Multiply a vector (regarded as a matrix with one column) by a matrix of suitable dimensions to produce another vector. Work with matrices as transformations of vectors.  | Trigonometry<br>Unit 4: Applications of Trigonometry | * Vectors as Matrices Pg 1<br>Through a text-based lesson, students are shown how to multiply vectors as matrices and 2 by 2 matrices to create reflections and rotations of the given vector. | * Unit 4 Assignment: Vectors and Dot Product<br>* Unit 4 Test: Applications of Trigonometry<br>Using multiple choice questions, students will find reflections and rotations of given vectors in rectangular form.   | 348349           |                  |                  |
|       | MACC.912.N-VM.3.12  |   | (vii) Work with 2 x 2 matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area.  | Trigonometry<br>Unit 4: Applications of Trigonometry | * Vectors as Matrices Pg 1<br>Through a text-based lesson, students are shown how to create reflections and rotations of a given vector.   | * Unit 4 Assignment: Vectors and Dot Product<br>* Unit 4 Test: Applications of Trigonometry<br>Using multiple choice questions, students will find reflections and rotations of given vectors and the area of a triangle, given the coordinates of the vertices. | 348911<br>349349 |                  |                  |
| A.SSE | <b>Seeing Structure in Expressions</b>                      |   |  |  |  |  |                  |                  |                  |
|       | Cluster 1   | <b>Interpret the structure of an expression</b>                             |  |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.1.1  |   | Interpret expressions that represent a quantity in terms of its context.   |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.1.1.a  |   | Interpret parts of an expression, such as terms, factors, and coefficients.  |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.1.1.b  |   | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(x) + Q(x)$ as the product of $P(x)$ and a factor not depending on $x$ .  |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.1.2  |   | Use the structure of an expression to identify ways to rewrite it. For example, see $x^2 - y^2$ as $(x + y)(x - y)$ , thus recognizing it as a difference of squares that can be factored as $(x + y)(x - y)$ .  |  |  |  |                  |                  |                  |
|       | Cluster 2   | <b>Write expressions in equivalent forms to solve problems</b>              |  |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.2.3  |   | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.   |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.2.3.a  |   | Factor a quadratic expression to reveal the zeros of the function it defines.  |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.2.3.b  |   | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.   |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.2.3.c  |   | Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^t$ can be rewritten as $(1 + 0.15)^t = 1 + 0.15t$ to reveal the approximate monthly interest rate if the annual rate is 15%.  |  |  |  |                  |                  |                  |
|       | MACC.912.A-SSE.2.4  |   | Derive the formula for the sum of a finite geometric series when the common ratio is not 1, and use the formula to solve problems. For example, calculate compound amounts.  |  |  |  |                  |                  |                  |
| A.APR | <b>Arithmetic with Polynomials and Rational Expressions</b> |   |  |  |  |  |                  |                  |                  |
|       | Cluster 1   | <b>Perform arithmetic operations on polynomials</b>                         |  |  |  |  |                  |                  |                  |
|       | MACC.912.A-APR.1.1  |   | Understand that polynomials form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division; add, subtract, and multiply polynomials.  |  |  |  |                  |                  |                  |
|       | Cluster 2   | <b>Understand the relationship between zeros and factors of polynomials</b> |  |  |  |  |                  |                  |                  |
|       | MACC.912.A-APR.2.2  |   | Know and apply the Remainder Theorem: For a polynomial $P(x)$ and a number $a$ , the remainder on division by $x - a$ is $P(a)$ , so $P(a) = 0$ if and only if $(x - a)$ is a factor of $P(x)$ .   |  |  |  |                  |                  |                  |
|       | MACC.912.A-APR.2.3  |   | Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial.  |  |  |  |                  |                  |                  |
|       | Cluster 3   | <b>Use polynomial identities to solve problems</b>                          |  |  |  |  |                  |                  |                  |
|       | MACC.912.A-APR.3.4  |   | Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identity $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ can be used to generate Pythagorean triples.  |  |  |  |                  |                  |                  |
|       | MACC.912.A-APR.3.5  |   | (i) Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of $x$ and $y$ for a positive integer $n$ , where $x$ and $y$ are any numbers, with coefficients determined by Pascal's Triangle.   |  |  |  |                  |                  |                  |
|       | Cluster 4   | <b>Rewrite rational expressions</b>   |  |  |  |  |                  |                  |                  |
|       | MACC.912.A-APR.4.6  |   | Rewrite single rational expressions in different forms; write $\frac{a(x)}{b(x)}$ in the form $\frac{q(x)}{b(x)} + \frac{r(x)}{b(x)}$ , where $q(x)$ , $r(x)$ , and $b(x)$ are polynomials with the degree of $r(x)$ less than the degree of $b(x)$ , using inspection, long division, or, for the more complicated examples, a computer algebra system. |  |  |  |                  |                  |                  |

| State | Parent Standard ID                               | Standard ID   | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |

|       | MACC.912.A-APR.4.7                               |   | (ii) Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.  |                  |             |                 |      |                  |                  |
| A.CED | <b>Creating Equations</b>                        |   |  |                  |             |                 |      |                  |                  |
|       | Cluster 1  | <b>Create equations that describe numbers or relationships</b>                |  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-CED.1.1                               |   | Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-CED.1.2                               |   | Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-CED.1.3                               |   | Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or nonviable options in a modeling context. For example, represent inequalities describing horizontal and cost constraints on combinations of different foods.  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-CED.1.4                               |   | Rearrange formulas to highlight a quantity of interest; using the same reasoning as in solving equations. For example, rearrange Ohm's law $V = IR$ to highlight $R$ .   |                  |             |                 |      |                  |                  |
| A.REI | <b>Reasoning with Equations and Inequalities</b> |   |  |                  |             |                 |      |                  |                  |
|       | Cluster 1  | <b>Understand solving equations as a process of reasoning and explain</b>     |  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.1.1                               |   | Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.1.2                               |   | Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.   |                  |             |                 |      |                  |                  |
|       | Cluster 2  | <b>Solve equations and inequalities in one variable</b>                       |  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.2.3                               |   | Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.   |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.2.4                               |   | Solve quadratic equations in one variable.   |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.2.4.a                             |   | Use the method of completing the square to transform any quadratic equation in $x$ into an equation of the form $(x - p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form.  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.2.4.b                             |   | Solve quadratic equations by inspection (e.g., for $x^2 = 49$ ), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a + bi$ for real numbers $a$ and $b$ .   |                  |             |                 |      |                  |                  |
|       | Cluster 3  | <b>Solve systems of equations</b>   |  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.3.6                               |   | Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.3.6                               |   | Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.   |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.3.7                               |   | Solve a system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line $y = -3x + 5$ and the circle $x^2 + y^2 = 34$ .  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.3.8                               |   | (i) Represent a system of linear equations as a single matrix equation in a vector variable.   |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.3.9                               |   | (ii) Find the inverse of a matrix if it exists and use it to solve systems of linear equations (using technology for matrices of dimension 3 x 3 or greater).  |                  |             |                 |      |                  |                  |
|       | Cluster 4  | <b>Represent and solve equations and inequalities graphically</b>             |  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.4.10                              |   | Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).  |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.4.11                              |   | Explain why the $x$ -coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic. |                  |             |                 |      |                  |                  |
|       | MACC.912.A-REI.4.12                              |   | Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.  |                  |             |                 |      |                  |                  |
| F.IF  | <b>Interpreting functions</b>                    |   |  |                  |             |                 |      |                  |                  |
|       | Cluster 1  | <b>Understand the concept of a function and use function notation</b>         |  |                  |             |                 |      |                  |                  |
|       | MACC.912.F-IF.1.1                                |   | Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$ . The graph of $f$ is the graph of the equation $y = f(x)$ .  |                  |             |                 |      |                  |                  |
|       | MACC.912.F-IF.1.2                                |   | Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.  |                  |             |                 |      |                  |                  |
|       | MACC.912.F-IF.1.3                                |   | Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1$ , $f(n+1) = f(n) + f(n-1)$ for $n \geq 1$ .   |                  |             |                 |      |                  |                  |
|       | Cluster 2  | <b>Interpret functions that arise in applications in terms of the context</b> |  |                  |             |                 |      |                  |                  |

|       |                    | MACC.912.F-IF.2.4   | For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.                       | Trigonometry<br>Unit 2: The Unit Circle | • Trigonometric Functions of Real Numbers<br>• Graphing Trigonometric Functions<br>• Transformations of Trigonometric Functions Pgs 1-4<br><br>In text and multimedia with audio based lessons with interactive practice problems, students will graph and identify key aspects of the sine, cosine, and tangent functions.                          | • Unit 2 Assignment: Graphing Trigonometric Functions<br>• Unit 2 Test: The Unit Circle<br><br>Using multiple choice questions, students graph and identify key aspects of trigonometric functions.  | 346281<br>344940<br>344906 |                  |                  |
|       |                    | MACC.912.F-IF.2.5   | Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function $h(t)$ gives the number of person-hours it takes to assemble $n$ engines in a factory, then the positive integers would be an appropriate domain for the function.  |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.2.6   | Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.  |   |  |  |                            |                  |                  |
|       | Cluster 3          | <b>Analyze functions using different representations</b>                  |   |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.7   | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.   |   |  |  |                            |                  |                  |
|       | MACC.912.F-IF.3.7  | MACC.912.F-IF.3.7.a   | Graph linear and quadratic functions and show intercepts, maxima, and minima  |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.7.b   | Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions  |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.7.c   | Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing and behavior  |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.7.d   | Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing and behavior   |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.7.e   | Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude   | Trigonometry<br>Unit 2: The Unit Circle | • Graphing Trigonometric Functions Pgs 2-3<br>• Transformations of Trigonometric Functions Pgs 1-4<br><br>In text and multimedia with audio based lessons with interactive practice problems, students will graph the sine, cosine, and tangent functions and transformations of those functions.  | • Unit 2 Assignment: Graphing Trigonometric Functions<br>• Unit 2 Test: The Unit Circle<br><br>Using multiple choice questions, students will identify correctly graphed exponential, logarithmic, and trigonometric functions and identify various aspects of the graphs. | 344940<br>344906           |                  |                  |
|       |                    | MACC.912.F-IF.3.8   | Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function  |   |  |  |                            |                  |                  |
|       | MACC.912.F-IF.3.8  | MACC.912.F-IF.3.8.a   | Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context  |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.8.b   | Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as $y = (1.02)^t$ , $y = (0.97)^t$ , $y = (1.01)^{3t}$ , $y = (1.2)^{\frac{t}{3}}$ , and classify them as representing exponential growth or decay   |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-IF.3.9   | Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, determine which has the larger maximum  |   |  |  |                            |                  |                  |
|       | F.BF               | <b>Building Functions</b>   |   |   |  |  |                            |                  |                  |
|       | Cluster 1          | <b>Build a function that models a relationship between two quantities</b> |   |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-BF.1.1   | Write a function that describes a relationship between two quantities.  |   |  |  |                            |                  |                  |
|       | MACC.912.F-BF.1.1  | MACC.912.F-BF.1.1.a   | Determine an explicit expression, a recursive process, or steps for calculation from a context  |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-BF.1.1.b   | Combine standard function types using arithmetic operations. For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model   |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-BF.1.1.c   | (i) Composite functions. For example, if $T(y)$ is the temperature in the atmosphere as a function of height, and $h(t)$ is the height of a weather balloon as a function of time, then $T(h(t))$ is the temperature at the location of the weather balloon as a function of time<br>(ii) Compare functions. For example, given a graph of one quadratic function and an algebraic expression for another, determine which has the larger maximum |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-BF.1.2   | Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.  |   |  |  |                            |                  |                  |
|       | Cluster 2          | <b>Build new functions from existing functions</b>                        |   |   |  |  |                            |                  |                  |
|       |                    | MACC.912.F-BF.2.3   | Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$ , $k f(x)$ , $f(kx)$ , and $f(x + k)$ for specific values of $k$ (both positive and negative); find the value of $k$ given the graphs. Experiment with cases and illustrate an exploration of the effects on the graph using technology. Include recognizing even and odd functions from their graphs and algebraic expressions for them                                       | Trigonometry<br>Unit 2: The Unit Circle | • Graphing Trigonometric Functions<br>• Transformations of Trigonometric<br><br>In text and multimedia with audio based lessons with interactive practice problems, students will identify the odd/even nature of trigonometric functions and transformations of trigonometric functions: vertical, phase shift and amplitude, and change of period. | • Unit 2 Assignment: Graphing Trigonometric Functions<br>• Unit 2 Test: The Unit Circle<br><br>Using multiple choice questions, students graph and identify key aspects of trigonometric functions.  | 344940<br>344906           |                  |                  |
|       |                    | MACC.912.F-BF.2.4   | Find inverse functions  |   |  |  |                            |                  |                  |
|       | MACC.912.F-BF.2.4  | MACC.912.F-BF.2.4.a   | Solve an equation of the form $f(x) = c$ for a simple function $f$ that has an inverse and write an expression for the inverse. For example, $f(x) = 2x^3 + 1$ , $f(x) = \ln(x)$ , $f(x) = \frac{1}{x^2}$ , $f(x) = x^3 + 2$ , $f(x) = x - 7$ , $f(x) = \frac{1}{x}$ , $f(x) = x^2 - 4$   |   |  |  |                            |                  |                  |

|           |                    | MACC.912.F-TF.2.6                        | (f) Understand that restricting a trigonometric function to a domain on which it is always increasing or always decreasing allows its inverse to be constructed                  | Trigonometry<br>Unit 2: The Unit Circle                 | • Graphing Trigonometric Functions Pgs 5-6<br><br>In text and multimedia with audio based lessons with interactive practice problems, students verify that for trigonometric functions, the domain of the function must be restricted in order to get an inverse for the function.   |  | 344960           |                  |                  |
|           |                    | MACC.912.F-TF.2.7                        | (g) Use inverse functions to solve trigonometric equations that arise in modeling contexts; evaluate the solutions using technology, and interpret them in terms of the context. | Trigonometry<br>Unit 1: Trigonometry in Right Triangles | • Finding Sides and Angles Given Trigonometric Ratios Pgs 1-5<br>• Applications Involving Right Triangles Pgs 1-2<br><br>In text and multimedia with audio based lessons with interactive practice problems, students will use sine, cosine, and tangent to find missing parts of right triangles, and use this to solve application problems involving right triangles. | • Unit 1 Assignment: Right Triangle Trigonometry and Finding Sides and Angles<br>• Unit 1 Assignment: Right Triangles and their Applications<br>• Unit 1 Test: Trigonometry in Right Triangles | 344756<br>348586 |                  |                  |
| Cluster 3 |                    | Prove and apply trigonometric identities |  | Trigonometry<br>Unit 2: The Unit Circle                 | • Quadrant I of the Unit Circle Pg 1<br>• Trigonometric Functions in Quadrant II - IV Pgs 6-7<br><br>In a text based lesson, students will use special triangles with a hypotenuse equal to 1 to find sine, cosine, and tangent of 0, 30, 45, 60, and 90 degrees.  | • Unit 2 Activity: The Unit Circle<br>• Unit 2 Test: The Unit Circle   | 344781<br>344784 |                  |                  |
|           |                    | MACC.912.F-TF.3.9                        | (h) Prove the addition and subtraction formulas for sine, cosine, and tangent and use them to solve problems   | Trigonometry<br>Unit 3: Identities and Equations        | • Sum and Difference Identities Pgs 1-8<br><br>In text and teacher led multimedia with audio based lessons with interactive practice problems, the formula for $\cos(A - B)$ is derived and then odd/even and cofunction properties are used to define the other functions   | • Unit 3 Assignment: Verifying Identities<br>• Unit 3 Assignment: Applying Identities<br>Unit 3 Test: Identities and Equations   | 348592           |                  |                  |

| G.CO Congruence |   |   |  |  |  |  |  |  |  |
|-----------------|---|---|--|--|--|--|--|--|--|
| Cluster 1       | Experiment with transformations in the plane    |   |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.1.1                               | Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc  |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.1.2                               | Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs; compare transformations that preserve distance and angle to those that do not (e.g., translation versus rotation versus reflection) |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.1.3                               | Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself   |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.1.4                               | Develop definitions of rotations, reflections, and translations in terms of angles, perpendicular lines, parallel lines, and line segments  |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.1.5                               | Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another   |  |  |  |  |  |  |  |
| Cluster 2       | Understand congruence in terms of rigid motions |   |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.2.9                               | Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent   |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.2.7                               | Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent   |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.2.8                               | Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions   |  |  |  |  |  |  |  |
| Cluster 3       | Prove geometric theorems                        |   |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.3.9                               | Prove theorems about lines and angles. Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints            |  |  |  |  |  |  |  |
|                 | MACC.912.G-CO.3.10                              | Prove theorems about triangles. Theorems include: measures of interior angles of a triangle sum to 180°; base angles of isosceles triangles are congruent; the segment joining midpoints of two sides of a triangle is parallel to the third side and half the length; the medians of a triangle meet at a point                              |  |  |  |  |  |  |  |

| State     | Parent Standard ID   | Standard ID   | State Standard Description  | Course/Unit Name                             | Lesson Name  | Assessment Name   | RSID             | Bloom's Expected | Bloom's Achieved |
|-----------|--|---|---|--|--|---|------------------|------------------|------------------|
|           |  | MACC.912.G-CO.3.11  | Prove theorems about parallelograms. Theorems include: opposite sides are congruent, opposite angles are congruent, the diagonals of a parallelogram bisect each other, and conversely, rectangles are parallelograms with congruent diagonals. |  |  |   |                  |                  |                  |
| Cluster 4 | Make geometric constructions   |   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-CO.4.1  | Make formal geometric constructions with a variety of tools and methods (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.): copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line and constructing a line perpendicular to a given line through a point on the line |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-CO.4.13   | Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle  |   |  |  |   |                  |                  |                  |
| G.SRT     | Similarity, Right Triangles, and Trigonometry                            |   |   |  |  |   |                  |                  |                  |
| Cluster 1 | Understand similarity in terms of similarity transformations             |   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.1.1   | Verify experimentally the properties of dilations given by a center and a scale factor  |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.1.1.a   | A dilation takes a line not passing through the center of the dilation to a parallel line, and leaves a line passing through the center unchanged   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.1.1.b   | The dilation of a line segment is longer or shorter in the ratio given by the scale factor  |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.1.2   | Given two figures, use the definition of similarity in terms of similarity transformations to decide if they are similar; explain using similarity transformations the meaning of similarity for triangles as the equality of all corresponding pairs of angles and the proportionality of all corresponding pairs of sides   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.1.3   | Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar  |   |  |  |   |                  |                  |                  |
| Cluster 2 | Prove theorems involving similarity                                      |   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.2.4   | Prove theorems about triangles. Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely; the Pythagorean Theorem proved using triangle similarity  |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.2.5   | Use congruence and similarity criteria for triangles to solve problems and to derive relationships in geometric figures   |   |  |  |   |                  |                  |                  |
| Cluster 3 | Define trigonometric ratios and solve problems involving right triangles |   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.3.4   | Understand that by similarity, side ratios in right triangles are properties of the angles in the triangle, leading to definitions of trigonometric ratios for acute angles   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.3.7   | Explain and use the relationship between the sine and cosine of complementary angles  |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.3.8   | Use trigonometric ratios and the Pythagorean Theorem to solve right triangles in applied problems   |   |  |  |   |                  |                  |                  |
| Cluster 4 | Apply trigonometry to general triangles                                  |   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-SRT.4.9   | (i) Derive the formula $A = \frac{1}{2} ab \sin(C)$ for the area of a triangle by drawing an auxiliary line from a vertex perpendicular to the opposite side  | Trigonometry<br>Unit 4: Applications of Trigonometry  | • Area Formulas Pg 1                         |  |   | 348604           |                  |                  |
|           | MACC.912.G-SRT.4.10  | (j) Prove the Laws of Sines and Cosines and use them to solve problems  | Trigonometry<br>Unit 4: Applications of Trigonometry  | • Law of Sines Pg 2<br>• Law of Cosines Pg 1 | Through a text based lesson, students will find the area of a triangle using two sides and the included angle.                                       | • Unit 4 Assignment: Law of Sines and Law of Cosines<br>• Unit 4 Test: Applications of Trigonometry   | 348602<br>348603 |                  |                  |
|           | MACC.912.G-SRT.4.11  | (k) Understand and apply the Law of Sines and the Law of Cosines to find unknown measurements in right and non-right triangles (e.g., surveying problems, resultant forces)   | Trigonometry<br>Unit 4: Applications of Trigonometry  | • Law of Sines Pg 2<br>• Law of Cosines Pg 1 | Through text based lessons, students will use the Law of Sines and the Law of Cosines to find missing parts of oblique triangles.                    | Using multiple choice questions, students use the Law of Sines and the Law of Cosines to find missing parts in oblique triangles.                         | 348602<br>348603 |                  |                  |
|           | MACC.912.G-SRT.4.11  | (k) Understand and apply the Law of Sines and the Law of Cosines to find unknown measurements in right and non-right triangles (e.g., surveying problems, resultant forces)   | Trigonometry<br>Unit 4: Applications of Trigonometry  | • Law of Sines Pg 2<br>• Law of Cosines Pg 1 | In text based lessons, students will use the Law of Sines and the Law of Cosines to find missing parts of oblique triangles in application problems. | Using multiple choice questions, students use the Law of Sines and the Law of Cosines to find missing parts in oblique triangles in application problems. | 348602<br>348603 |                  |                  |
| G.C       | Circles  |   |   |  |  |   |                  |                  |                  |
| Cluster 1 | Understand and apply theorems about circles                              |   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-C.1.1   | Prove that all circles are similar  |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-C.1.2   | Identify and describe relationships among inscribed angles, radii, and chords. Include the relationship between central, inscribed, and circumscribed angles; inscribed angles on a diameter are right angles; the radius of a circle is perpendicular to the tangent where the radius intersects the circle.   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-C.1.3   | Construct the inscribed and circumscribed circles of a triangle, and prove properties of angles for a quadrilateral inscribed in a circle   |   |  |  |   |                  |                  |                  |
|           | MACC.912.G-C.1.4   | (l) Construct a tangent line from a point outside a given circle to the circle  |   |  |  |   |                  |                  |                  |
| Cluster 2 | Find arc lengths and areas of sectors of circles                         |   |   |  |  |   |                  |                  |                  |

| State | Parent Standard ID                             | Standard ID         | State Standard Description  | Course/Unit Name                     | Lesson Name   | Assessment Name | RSID   | Bloom's Expected | Bloom's Achieved |
|-------|--|---------------------|---|--------------------------------------|---|-----------------|--------|------------------|------------------|
|       |  | MACC.912.G-C.2.5    | Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector   | Trigonometry Unit 2: The Unit Circle | *Arcs and Sectors with Applications Pg 1  |                 | 348571 |                  |                  |
|       |  |                     |   |                                      | In a text based presentation, students prove that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality. They also calculate the area of a sector as a fraction of the area of the entire circle, with the independent variable being the size of the central angle. |                 |        |                  |                  |
| G.GPE | Expressing Geometric Properties with Equations |                     |   |                                      |   |                 |        |                  |                  |
|       | Cluster 1                                      | MACC.912.G-GPE.1.1  | Translate between the geometric description and the equation for a conic section  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.1.2  | Derive the equation of a circle given the center and radius using the Pythagorean Theorem; complete the square to find the center and radius of a circle given by an equation   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.1.3  | Derive the equation of a parabola given a focus and directrix   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.1.4  | Derive the equations of ellipses and hyperbolas given the foci, using the fact that the sum or difference of distances from the foci is constant  |                                      |   |                 |        |                  |                  |
|       | Cluster 2                                      | MACC.912.G-GPE.2.4  | Use coordinates to prove simple geometric theorems algebraically  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.2.5  | Use coordinates to prove simple geometric theorems algebraically. For example, prove or disprove that a figure defined by four given points in the coordinate plane is a rectangle, prove or disprove that the point (1, 1), (3, 1), (3, 2) lies on the circle centered at the origin and containing the point (0, 2) |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.2.6  | Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point)  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.2.7  | Find the point on a directed line segment between two given points that partitions the segment in a given ratio   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GPE.2.8  | Use coordinates to compute perimeters of polygons and areas of triangles and rectangles, e.g., via the distance formula   |                                      |   |                 |        |                  |                  |
| G.GMD | Geometric Measurement and Dimension            |                     |   |                                      |   |                 |        |                  |                  |
|       | Cluster 1                                      | MACC.912.G-GMD.1.1  | Explain volume formulas and use them to solve problems  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GMD.1.2  | Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone. Use dissection arguments, Cavalieri's principle, and informal limit arguments  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GMD.1.3  | Use an informal argument using Cavalieri's principle for the formulas for the volume of a sphere and other solid figures  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GMD.1.4  | Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems   |                                      |   |                 |        |                  |                  |
|       | Cluster 2                                      | MACC.912.G-GMD.2.4  | Visualize relationships between two-dimensional and three-dimensional objects   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-GMD.2.5  | Identify the shapes of two-dimensional cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects  |                                      |   |                 |        |                  |                  |
| G.MG  | Modeling with Geometry                         |                     |   |                                      |   |                 |        |                  |                  |
|       | Cluster 1                                      | MACC.912.G-MG.1.1   | Apply geometric concepts in modeling situations   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-MG.1.2   | Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder)   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-MG.1.3   | Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot)  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.G-MG.1.4   | Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with hydrographic and systems based on ratios)   |                                      |   |                 |        |                  |                  |
| S.ID  | Interpreting Categorical and Quantitative Data |                     |   |                                      |   |                 |        |                  |                  |
|       | Cluster 1                                      | MACC.912.S-ID.1.1   | Summarize, represent, and interpret data on a single count or measurement variable  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.1.2   | Represent data with plots on the number line (dot plots, histograms, and box plots)   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.1.3   | Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.1.4   | Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers)   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.1.5   | Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve                     |                                      |   |                 |        |                  |                  |
|       | Cluster 2                                      | MACC.912.S-ID.2.5   | Summarize, represent, and interpret data on two categorical and quantitative variables  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.2.6   | Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.2.6.a | Represent data on two quantitative variables on a scatter plot, and describe how the variables are related  |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.2.6.b | Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.2.6.c | Informally assess the fit of a function by plotting and analyzing residuals   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.2.6.d | Fit a linear function to a scatter plot that suggests a linear association  |                                      |   |                 |        |                  |                  |
|       | Cluster 3                                      | MACC.912.S-ID.3.7   | Interpret linear models   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.3.8   | Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data   |                                      |   |                 |        |                  |                  |
|       |  | MACC.912.S-ID.3.9   | Compute (using technology) and interpret the correlation coefficient of a linear fit  |                                      |   |                 |        |                  |                  |

|-------|--|---------------------|---|------------------|-------------|-----------------|------|------------------|------------------|
|       |  | MACC.912.S-ID.3.9   | Distinguish between correlation and causation   |                  |             |                 |      |                  |                  |
| S.IC  | Making Inferences and Justifying Conclusions         |                     |   |                  |             |                 |      |                  |                  |
|       | Cluster 1  | MACC.912.S-IC.1.1   | Understand and evaluate random processes underlying statistical experiments   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-IC.1.2   | Understand statistics as a process for making inferences about population parameters based on a random sample from that population  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-IC.1.3   | Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?   |                  |             |                 |      |                  |                  |
|       | Cluster 2  | MACC.912.S-IC.2.3   | Make inferences and justify conclusions from sample surveys, experiments, and observational studies; explain how randomization relates to each  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-IC.2.4   | Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-IC.2.5   | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-IC.2.6   | Evaluate reports based on data  |                  |             |                 |      |                  |                  |
| S.CP  | Conditional Probability and the Rules of Probability |                     |   |                  |             |                 |      |                  |                  |
|       | Cluster 1  | MACC.912.S-CP.1.1   | Understand independence and conditional probability and use them to interpret data  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.1.2   | Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not")  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.1.3   | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities, and use this characterization to determine if they are independent   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.1.4   | Understand the conditional probability of A given B as $P(A B) = \frac{P(A \cap B)}{P(B)}$ , and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A, and the conditional probability of B given A is the same as the probability of B  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.1.5   | Construct and interpret two-way frequency tables of data when two categories are associated with each other being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.1.6   | Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer  |                  |             |                 |      |                  |                  |
|       | Cluster 2  | MACC.912.S-CP.2.4   | Use the rules of probability to compute probabilities of compound events in a uniform probability model   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.7   | Find the conditional probability of A given B as the fraction of B's outcomes that also belong to A, and interpret the answer in terms of the model   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.8   | Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$ , and interpret the result in terms of the model  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.9   | Apply the general Multiplication Rule in a uniform probability model, $P(A \text{ and } B) = P(A)P(B A) = P(B)P(A B)$ , and interpret the answer in terms of the model  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-CP.2.10  | Use permutations and combinations to compute probabilities of compound events and solve problems  |                  |             |                 |      |                  |                  |
| S.MD  | Using Probability to Make Decisions                  |                     |   |                  |             |                 |      |                  |                  |
|       | Cluster 1  | MACC.912.S-MD.1.1   | Calculate expected values and use them to solve problems  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.2   | (i) Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.3   | (ii) Calculate the expected value of a random variable; interpret it as the mean of the probability distribution  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.4   | (iii) Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.1.5   | (iv) Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?   |                  |             |                 |      |                  |                  |
|       | Cluster 2  | MACC.912.S-MD.2.5   | Use probability to evaluate outcomes of decisions   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.2.5.a | (i) Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values   |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.2.5.b | Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.2.5.c | Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident  |                  |             |                 |      |                  |                  |
|       |  | MACC.912.S-MD.2.6   | (ii) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator)  |                  |             |                 |      |                  |                  |

| State   | Parent Standard ID | Standard ID       | State Standard Description   | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|---|--------------------|-------------------|--|------------------|-------------|-----------------|------|------------------|------------------|
|   |                    | MACC.912.S-MD.2.7 | (7) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).  |                  |             |                 |      |                  |                  |
| <b>A.SSE Domain: MATHEMATICAL PRACTICE</b>  |                    |                   |  |                  |             |                 |      |                  |                  |
| <b>Cluster 1 Make sense of problems and persevere in solving them.</b>            |                    |                   |  |                  |             |                 |      |                  |                  |
|   |                    | MACC.K12.MP.1.1   | <p>Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p> |                  |             |                 |      |                  |                  |
| <b>Cluster 2 Reason abstractly and quantitatively.</b>                            |                    |                   |  |                  |             |                 |      |                  |                  |
|   |                    | MACC.K12.MP.2.1   | <p>Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand, considering the units involved, attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |
| <b>Cluster 3 Construct viable arguments and critique the reasoning of others.</b> |                    |                   |  |                  |             |                 |      |                  |                  |
|   |                    | MACC.K12.MP.3.1   | <p>Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |                  |             |                 |      |                  |                  |
| <b>Cluster 4 Model with mathematics.</b>  |                    |                   |  |                  |             |                 |      |                  |                  |

| State   | Parent Standard ID | Standard ID     | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|---|--------------------|-----------------|---|------------------|-------------|-----------------|------|------------------|------------------|
|   |                    | MACC.K12.MP.4.1 | <p>Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |
| <b>Cluster 5 Use appropriate tools strategically.</b> |                    |                 |   |                  |             |                 |      |                  |                  |
|   |                    | MACC.K12.MP.5.1 | <p>Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> |                  |             |                 |      |                  |                  |
| <b>Cluster 6 Attend to precision.</b>                 |                    |                 |   |                  |             |                 |      |                  |                  |
|   |                    | MACC.K12.MP.6.1 | <p>Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>  |                  |             |                 |      |                  |                  |
| <b>Cluster 7 Look for and make use of structure.</b>  |                    |                 |   |                  |             |                 |      |                  |                  |

| State | Parent Standard ID | Standard ID  | State Standard Description  | Course/Unit Name | Lesson Name | Assessment Name | RSID | Bloom's Expected | Bloom's Achieved |
|-------|--------------------|--|---|------------------|-------------|-----------------|------|------------------|------------------|
|       |                    | MACC.K12.MP.7.1  | <p>Look for and make use of structure.</p> <p>Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see <math>7 \times 8</math> equals the well remembered <math>7 \times 5 + 7 \times 3</math>, in preparation for learning about the distributive property. In the expression <math>x^2 + 9x + 14</math>, older students can see the <math>14</math> as <math>2 \times 7</math> and the <math>9</math> as <math>2 + 7</math>. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see <math>5 - 3(x - y)^2</math> as <math>5</math> minus a positive number times a square and use that to realize that its value cannot be more than <math>5</math> for any real numbers <math>x</math> and <math>y</math>.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> |                  |             |                 |      |                  |                  |
|       | Cluster 8          | Look for and express regularity in repeated reasoning. |   |                  |             |                 |      |                  |                  |
|       |                    | MACC.K12.MP.8.1  | <p>Look for and express regularity in repeated reasoning.</p> <p>Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing <math>25</math> by <math>11</math> that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through <math>(1, 2)</math> with slope <math>3</math>, middle school students might abstract the equation <math>(y - 2)(x - 1) = 3</math>. Noticing the regularity in the way terms cancel when expanding <math>(x - 1)(x + 1)</math>, <math>(x - 1)(x^2 + x + 1)</math> and <math>(x - 1)(x^3 + x^2 + x + 1)</math> might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |                  |             |                 |      |                  |                  |

|                |   |        | The Human Genome Project and Ethical Issues<br><br>Virtual lab lesson and text-based lessons. Students will learn about the benefits, detriments, and social ramifications of biotechnology in farming, breeding, and medicine. In the lab lesson, students will understand the different tools and methods that are used to determine the DNA of an individual.   | 120702 | Paper: Human Genome Project and Ethical Issues<br><br>Discussion: Transgenic Organisms<br><br>Lab report, peer-to-peer interactive discussions, and multi-part research paper. Students will answer questions describing the different methods of genetic engineering in agriculture, medicine, and breeding organisms. In the paper and discussion, students will address the social, economic, and ethical issues associated with genetic engineering by performing research using websites, books, and other materials. |
| SC.912.L.16.13 | Describe the basic anatomy and physiology of the human reproductive system. Describe the process of human development from fertilization to birth and major changes that occur in each trimester of pregnancy.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345884 | <b>Biology B Unit 10: Body Systems Part II</b>   | 118545 | <b>Unit 10 Assignments:</b>  |
|                |   | 345886 | Male Reproductive System   | 118540 | Assignment: Endocrine, Immune, and Reproductive Systems  |
|                |   | 345888 | Female Reproductive System<br><br>Fertilization to Birth<br><br>Text-based lessons and diagrams. Students will observe and analyze text and diagrams of the male and female reproductive systems. They will gain an understanding of the structures, functions, and processes involved in each system, how fertilization occurs, and what occurs during pregnancy. |        | Test: Body Systems Part II<br><br>Formative and summative, multiple choice assessments. Students will answer questions describing the structures, functions, and processes that occur in both male and female reproductive systems, and the development of a fetus from fertilization to birth.  |
| SC.912.L.16.14 | Describe the cell cycle, including the process of mitosis. Explain the role of mitosis in the formation of new cells and its importance in maintaining chromosome number during asexual reproduction.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts          | 345641 | <b>Biology A Unit 8: Cell Growth and Division</b>  | 118468 | <b>Unit 8 Assignments:</b>   |
|                |   | 345649 | The Cell Cycle   | 118471 | Assignment: The Cell Cycle   |
|                |   | 345650 | Mitosis and Cytokinesis<br><br>Lab: Mitosis<br><br>Virtual laboratory lesson and text-based lesson. Students learn about the process of mitosis, its role in cell reproduction, and the number of chromosomes of offspring equaling that of the parent cell during asexual reproduction.   | 118465 | Lab Report: Mitosis<br><br>Test: Cell Growth and Division<br><br>Lab report, and formative and summative, multiple choice assessments. Students will answer questions explaining the processes and stages involved in mitosis. In the lab, students complete tables and diagrams describing chromosome alignment, ploidy, and division of cells during mitosis.  |

|                                     |   |        |   |        |  |
|-------------------------------------|---|--------|---|--------|--|
| SC.912.L.16.16                      | Describe the process of meiosis, including independent assortment and crossing over. Explain how reduction division results in the formation of haploid gametes or spores.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345681 | <b>Biology A Unit 9: Cell Genetics</b>  | 118483 | <b>Unit 9 Assignments:</b>   |
|                                     |   | 345684 | Meiosis<br><br>Lab: Meiosis<br><br>Virtual laboratory lesson and text-based lesson. Students learn the processes involved during meiosis and how reduction occurs when gametes in plants and animals are formed.  | 118473 | Lab Report: Meiosis<br><br>Test: Genetics<br><br>Lab report and summative, multiple choice assessment. Students will complete a lab report containing diagrams, tables, and questions regarding the processes involved in meiosis. In the assessment, students will answer questions describing what occurs during meiosis, and determining how independent assortment, crossing over of chromosomes, and reduction occurs during the process. |
| SC.912.L.16.17                      | Compare and contrast mitosis and meiosis and relate to the processes of sexual and asexual reproduction and their consequences for genetic variation.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning                      | 345681 | <b>Biology A Unit 9: Cell Genetics</b>  | 118473 | <b>Unit 9 Assignments:</b>   |
|                                     |   | 345684 | Comparison of Mitosis and Meiosis<br><br>Text-based lesson. Students will read a summary comparing the processes that take place in mitosis and meiosis. Students also learn the advantages and disadvantages of sexual and asexual reproduction.   |        | Test: Genetics<br><br>Summative, multiple choice assessment. Students will answer questions where they determine the disadvantages and advantages of the two types of reproduction. They will also explain the processes occurring during meiosis and mitosis that contribute to these advantages and disadvantages.   |
| <b>Standard 17: Interdependence</b> |   |        |   |        |  |
| SC.912.L.17.2                       | Explain the general distribution of life in aquatic systems as a function of chemistry, geography, light, depth, salinity, and temperature.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning                                | 345327 | <b>Biology B Unit 1: Ecology</b>  | 118365 | <b>Unit 1 Assignments:</b>   |
|                                     |   | 345505 | Organisms and Their Environment   |        | Test: Ecology  |
|                                     |   | 345515 | Matter Cycling, Energy Flow, and Carrying Capacity<br><br>Biomes<br><br>Text-based lessons. Students will examine how different types of marine organisms are found at various ocean depths and water sources based on the characteristics of the aquatic system and the functions needed for the organisms to survive. |        | Summative, multiple choice assessment. Students will answer questions explaining where certain organisms might be found in an aquatic ecosystem based on the substances needed for the organisms to function and survive including chemistry, light availability, salinity, and water temperature.   |

|               |  |        |   |        |   |
|---------------|--|--------|---|--------|---|
| SC.912.L.17.4 | Describe changes in ecosystems resulting from seasonal variations, climate change and succession.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts   | 345510 | <b>Biology B Unit 1: Ecology</b>  | 118365 | <b>Unit 1 Assignment:</b>   |
|               |  | 345515 | Ecological Succession   |        | Test: Ecology   |
|               |  | 345526 | Biomes  |        | Summative, multiple choice assessment. Students will answer questions describing how an ecosystem might be affected when a change in climate, season, or natural disaster occurs. Students also describe what occurs at different times during ecological succession.   |
|               |  | 350498 | Biodiversity and Ecosystem Stability<br><br>Human Impacts on Planet Earth<br><br>Text-based lessons. Students will gain an understanding as to how ecosystems are influenced by changes involving the seasons, climate, and ecological succession, caused naturally and by humans.  |        |   |
| SC.912.L.17.5 | Analyze how population size is determined by births, deaths, immigration, emigration, and limiting factors (biotic and abiotic) that determine carrying capacity.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning           | 345515 | <b>Biology B Unit 1: Ecology</b>  | 118365 | <b>Unit 1 Assignment:</b>   |
|               |  |        | Matter Cycling, Energy Flow, and Carrying Capacity<br><br>Text-based lesson. Students will analyze the natural and human factors, and abiotic and biotic factors, that affect carrying capacity and, as a consequence, the population size of different species in an ecosystem.  |        | Test: Ecology<br><br>Summative, multiple choice assessment. Students will answer questions analyzing situations where different factors, abiotic and biotic, could influence the birth and death rate, migration of organisms, limit their populations, and how these factors influence carrying capacity.  |
| SC.912.L.17.8 | Recognize the consequences of the losses of biodiversity due to catastrophic events, climate changes, human activity, and the introduction of invasive, non-native species.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning | 345510 | <b>Biology B Unit 1: Ecology</b>  | 120743 | <b>Unit 1 Assignment:</b>   |
|               |  | 345515 | Ecological Succession   | 120736 | Required Chat: Introduction of Species in an Ecosystem  |
|               |  | 350498 | Biodiversity and Ecosystem Stability<br><br>Human Impacts on Planet Earth<br><br>Text-based lesson. Students will read a case study showing what occurs when a species of organism is introduced into a different ecosystem. They also observe the possible negative effects of this. Students also examine how human activities can affect biodiversity, and the natural and human factors that can cause extinction events. | 118365 | Paper: The Impact of Agricultural Practices on Ecosystems<br><br>Test: Ecology<br><br>Interactive teacher-student discussion, research paper, and summative, multiple choice assessment. In the assessment, students will answer questions that explain how the introduction of a species into a new ecosystem can have devastating effects. In the required chat, student will choose from a list a non-native, invasive species to an environment and perform research over it. They will discuss their findings with their teacher. In the paper, students will analyze the impact of agricultural practices in developed and undeveloped countries, and explain how they affect biodiversity. |

|                |  |        |  |        |   |
|----------------|--|--------|--|--------|---|
| SC.912.L.17.9  | Use a food web to identify and distinguish producers, consumers, and decomposers. Explain the pathway of energy transfer through trophic levels and the reduction of available energy at successive trophic levels.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345327 | <b>Biology B Unit 1: Ecology</b>   | 118365 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students identify the trophic level, amount of energy available at each level, and determine how much energy decreased by answering questions about different types of organisms. Students also use biomass diagrams, food webs, food pyramids, and flowcharts to answer questions and determine whether an organism is a producer, consumer, or decomposer.   |
|                |  | 345505 | Organisms and Their Environment<br><br>Matter Cycling, Energy Flow, and Carrying Capacity<br><br>Text-based lesson, diagrams, and flowcharts. Students will identify the characteristics of producers, consumers, and decomposers. They will also observe diagrams and flowcharts showing how energy levels compare for each type of organism, how biomass compares, and how energy transfers in food webs, pyramids, and chains.  |        |   |
| SC.912.L.17.11 | Evaluate the costs and benefits of renewable and nonrenewable resources, such as water, energy, fossil fuels, wildlife, and forests.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning  | 350498 | <b>Biology B Unit 1: Ecology</b>   | 118365 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students answer questions about the costs and benefits of renewable and nonrenewable energy sources, and evaluate how deforestation, desertification, and other human activities can devastate ecosystems.   |
|                |  | 350499 | Human Impacts on Planet Earth<br><br>The Impact of Agricultural Practices on Ecosystems<br><br>Text-based lessons. Students read about the impact of chemically produced products like plastics, fertilizers, and fossil fuels have both societal and environmental impacts that can be positive and negative. Students also analyze how these products are monitored and conserved in both developing and developed countries.  |        |   |
| SC.912.L.17.13 | Discuss the need for adequate monitoring of environmental parameters when making policy decisions.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning  | 350498 | <b>Biology B Unit 1: Ecology</b>   | 118365 | <b>Unit 1 Assignment:</b><br><br>Paper: The Impact of Agricultural Practices on Ecosystems<br><br>Research paper. Students will perform research on developed and developing countries determining where public policies have been made, and where they have not, to protect the environment. They will also research their own state and/or region, and explain what local, state, and federal government policies have been put into action to monitor agricultural practices while conserving resources. |
|                |  | 350499 | Human Impacts on Planet Earth<br><br>The Impact of Agricultural Practices on Ecosystems<br><br>Text-based lesson. Students will read about the positive and negative impacts that human beings have had on planet Earth, including conservationist methods, and how fossil fuels are harming the environment. Students will also understand that communities and countries form public policies to help preserve the environment and protect areas where natural resources are obtained. |        |   |

|   |   |        |   |        |   |
|---|---|--------|---|--------|---|
| SC.912.L.17.20  | Predict the impact of individuals on environmental systems and examine how human lifestyles affect sustainability.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning       | 350498 | <b>Biology B Unit 1: Ecology</b>  | 118365 | <b>Unit 1 Assignment:</b><br><br>Paper: The Impact of Agricultural Practices on Ecosystems<br><br>Test: Ecology<br><br>Research paper and summative, multiple choice assessment. Students perform research over a developed and developing country, comparing the global impact each has on ecosystems and the local impacts of human lifestyles and sustainability practices on local ecosystems. In the assessment, students use this knowledge to answer questions regarding how a practice or lifestyle may impact the environment.   |
|   |   | 350499 | Human Impacts on Planet Earth<br><br>The Impact of Agricultural Practices on Ecosystems<br><br>Text-based lessons. Students investigate how human activities impact all parts of an ecosystem and analyze the different lifestyles and sustainability practices humans can use to acquire needed resources without negatively impacting the environment. Students also analyze the difference of practices in developing and developed countries. |        |   |
| <b>Standard 18: Matter and Energy Transformations</b> |   |        |   |        |   |
| SC.912.L.18.1   | Describe the basic molecular structures and primary functions of the four major categories of biological macromolecules.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345522 | <b>Biology A Unit 4: The Chemistry of Life</b>  | 118415 | <b>Unit 4 Assignment:</b><br><br>Test: The Chemistry of Life<br><br>Summative, multiple choice assessment. students will answer questions describing which elements are found in cells. They also answer questions showing they understand the different characteristics and functions of carbohydrates, lipids, proteins, and nucleic acids.   |
|   |   |        | Biological Molecules<br><br>Text-based lesson. Students learn the elements found in cells, and understand the structures and function of the four biological molecules.   |        |   |
| SC.912.L.18.7   | Identify the reactants, products, and basic functions of photosynthesis.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts   | 345559 | <b>Biology A Unit 6: Cell Energy</b>  | 118449 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Photosynthesis<br><br>Activity: The Cycle of Matter<br><br>Test: Cell Energy<br><br>Lab report, fill-in-the-blank activity using a word bank, and summative, multiple choice assessment. In the lab, students will perform a virtual experiment on a hydrilla plant showing how different factors affect photosynthesis in plants. In the activity, students use a word bank to complete the step-by-step processes involved in photosynthesis. In the assessments, students will answer questions identifying the molecules, functions, and where in a plant photosynthesis occurs. |
|   |   | 345570 | Photosynthesis  | 118447 |   |
|   |   |        | Virtual Lab: Photosynthesis<br><br>Virtual laboratory lesson and text-based lesson including diagrams. Students will be able to determine what molecules are the reactants and products in the chemical reactions involved in photosynthesis. Students also will analyze the structure of plants and photosynthetic organisms where photosynthesis takes place.   | 118445 |   |

|                |   |        |   |        |  |
|----------------|---|--------|---|--------|--|
| SC.912.L.18.8  | Identify the reactants, products, and basic functions of aerobic and anaerobic cellular respiration.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345573 | <b>Biology A Unit 6: Cell Energy</b>  | 120045 | <b>Unit 6 Assignment:</b>  |
|                |   | 345575 | Glycolysis  | 118445 | Lab Report: Cellular Respiration in Yeast  |
|                |   | 349708 | Cellular Respiration<br><br>Lab: Cellular Respiration in Yeast<br><br>Hand-on laboratory activity and text-based lessons. Students will learn the molecules involved in the processes of cellular respiration. They will also learn the processes involved in both aerobic and anaerobic conditions, and the molecules involved. In the lab lesson, students will analyze how cellular respiration occurs in yeast and prepare for the hands-on lab assessment. |        | Test: Cell Energy<br><br>Hands-on lab activity report and summative, multiple choice assessment. In the lab assignment, students will answer pre-lab questions using their knowledge of cellular respiration. They will carry out an experiment using Brewer's yeast and record data into tables. Lastly, they answer a series of post-lab questions. In the assessment, students will answer questions determining the molecules involved in cellular respiration in both aerobic and anaerobic conditions. |
| SC.912.L.18.9  | Explain the interrelated nature of photosynthesis and cellular respiration.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts                          | 345575 | <b>Biology A Unit 6: Cell Energy</b>  | 118447 | <b>Unit 6 Assignments:</b>   |
|                |   | 349710 | Cellular Respiration<br><br>The Cycle of Matter<br><br>Text-based lessons including diagram. Students will examine text and a diagram explaining the interdependence of photosynthesis and cellular respiration. Both chemical equations of the processes and diagrams explain the relationship.  | 118445 | Activity: The Cycle of Matter<br><br>Test: Cell Energy<br><br>Fill-in-the-blank activity and summative, multiple choice assessment. In the activity, students use a word bank to explain the relationship between photosynthesis and cellular respiration in organisms. In the assessment, students answer questions explaining how the two processes are related and how, in chemical equations for both processes, how one is the opposite of the other.   |
| SC.912.L.18.10 | Connect the role of adenosine triphosphate (ATP) to energy transfers within a cell.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning                  | 345575 | <b>Biology A Unit 6: Cell Energy</b>  | 118447 | <b>Unit 6 Assignments:</b>   |

Students will analyze text, flowcharts, and diagrams explaining how and where ATP is formed, and how it provides energy for many cellular processes. The diagrams also exemplify how ATP is transferred within a cell throughout these processes.   | 118445 | Activity: The Cycle of Matter<br><br>Test: Cell Energy<br><br>Fill-in-the-blank activity and summative, multiple choice assessment. In the activity, students use a word bank which follows what molecules, including ATP, are formed and where in a cell during the processes of photosynthesis and cellular respiration.   |

|                |  |        |  |        |   |
|----------------|--|--------|--|--------|---|
| SC.912.L.18.11 | Explain the role of enzymes as catalysts that lower the activation energy of biochemical reactions. Identify factors, such as pH and temperature, and their effect on enzyme activity.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts                                | 345522 | <b>Biology A Unit 4: The Chemistry of Life</b>   | 118433 | <b>Unit 4 Assignments:</b>  |
|                |  | 345523 | Biological Molecules<br><br>Lab: Enzymes<br><br>Hands-on laboratory activity and text-based lesson. Students will learn the factors that can increase or decrease a chemical reaction. In the lab lesson, students will analyze the factors that effect enzyme and catalyst function.  | 118415 | Lab Report: Enzymes<br><br>Test: The Chemistry of Life<br><br>Hands-on experiment and lab report, and summative, multiple choice assessment. Students will perform an experiment on an enzyme and record the data in a lab report. In the assessment, students will answer questions explaining how enzymes function in reactions, and explain the factors affecting enzymatic processes. |
| SC.912.L.18.12 | Discuss the special properties of water that contribute to Earth's suitability as an environment for life: cohesive behavior, ability to moderate temperature, expansion upon freezing, and versatility as a solvent.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345488 | <b>Biology A Unit 4: The Chemistry of Life</b><br><br>Water<br><br>Text-based lesson. Students will learn the properties of water and that it is the universal solvent. Students will also understand water's properties such as cohesion, specific heat, etc. that make it essential for life on Earth.   | 118415 | <b>Unit 4 Assignment:</b><br><br>Test: The Chemistry of Life<br><br>Summative, multiple choice assessment. Students will answer questions that explain why water's properties are important to life on Earth and the factors that make it a universal solvent.  |
| SC.912.E.7.1:  | Analyze the movement of matter and energy through the different biogeochemical cycles, including water and carbon.<br><br>Cognitive complexity: Level 3: Strategic Thinking & Complex Reasoning .  | 345505 | <b>Biology B Unit 1: Ecology</b><br><br>Matter Cycling, Energy Flow, and Carrying Capacity<br><br>Text-based lesson including diagrams and flowcharts. Students will read diagrams of the carbon, oxygen, nitrogen, and water cycles through the lithosphere, hydrosphere, atmosphere, and biosphere. They will also analyze text that shows how human and natural processes, including increases in greenhouse gases, impacts these cycles. | 118635 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students will answer questions that show they know how matter and materials move through the water, carbon, oxygen, and nitrogen cycles.   |
| SC.912.N.1.1:  | Define a problem based on a specific body of knowledge, for example: biology, chemistry, physics, and earth/space science, and do the following:<br><br>1. pose questions about the natural world,<br><br>2. conduct systematic observations,  | 349708 | <b>Biology A Unit 6: Cell Energy</b><br><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students understand how to create a question or purpose for an experiment.  | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will create a question or purpose for the experiment regarding cellular respiration in yeast.   |

|  | 3. examine books and other sources of information to see what is already known,  | 349708 | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will need to perform research from information sources, and by using the lesson material, to answer the pre-lab questions.   | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will need to perform research from information sources, and by using the lesson material, to answer the pre-lab questions.   |
|  | 4. review what is known in light of empirical evidence,  | 349708 | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will understand why they need to perform research, to find what is already known about cellular respiration in yeast and use this research to gain an understanding of this concept before performing the lab. | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will need to perform research from information sources, to find what is already known about cellular respiration in yeast to answer the pre-lab questions.                 |
|  | 5. plan investigations,  | 349708 | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will understand why they should plan an investigation ahead and make sure the steps of their procedure can be reproduced by other scientists.  | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will perform the experiment according to the procedure in the lab lesson.  |
|  | 6. use tools to gather, analyze, and interpret data (this includes the use of measurement in metric and other systems, and also the generation and interpretation of graphical representations of data, including data tables and graphs), | 349708 | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will understand how to use data tables to organize data so that their results can be easily understood by other scientists.  | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will complete data tables complete with measurements in centimeters of the depth of bubbles and volume of gas produced during the experiment.                              |
|  | 7. pose answers, explanations, or descriptions of events,  | 349708 | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students learn how to use previous knowledge from other experiments and scientific ideas to propose answers and explanations of naturally occurring phenomena.  | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will form a hypothesis for what they expect to find when yeast cultures are placed in different concentrations of sucros.  |
|  | 8. generate explanations that explicate or describe natural phenomena (Inferences),  | 349708 | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will explain whether the data found from experimentation, and the information from their research, supports their hypothesis, in their conclusions and post-lab questions.                                     | 120045 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will explain whether the data found from experimentation, and the information from their research, supports their hypothesis, in their conclusions and post-lab questions. |

|   |  |   |  |   |   |
|---|--|---|--|---|---|
|   | 9. use appropriate evidence and reasoning to justify these explanations to others,   | 349708  | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will understand how to convey their experimental data verbally in an analysis, conclusion, or explanation to other scientists and their peers.   | 120045  | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will explain the relationship between the different amounts of carbon dioxide produced and the concentration of sucrose in the test tubes, and justify this explanation with experimental data.                 |
|   | 10. communicate results of scientific investigations, and  | 349708  | <b>Biology A Unit 6: Cell Energy</b><br>Lab: Cellular Respiration in Yeast<br><br>Hands-on lab lesson. Students will observe how scientific results are communicated by research papers, journals, and peer reviewed articles between scientists. Students will also learn why it is important for scientists to share scientific results with one another to further knowledge about a naturally occurring phenomenon.                                | 120045  | <b>Unit 6 Assignment:</b><br><br>Lab Report: Cellular Respiration in Yeast<br><br>Hands-on lab report. Students will share their results for the experiment in the conclusions and post-lab responses in the lab report.  |
|   | 11. evaluate the merits of the explanations produced by others.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning | 350515  | <b>Biology A Unit 1 The Nature of Science</b><br>Interpreting Scientific Claims<br><br>Text-based lesson including multimedia presentations, practice quiz, and practice questions. Students learn how to evaluate different scientific claims and explanations to see if they are valid, contain bias, and have been peer reviewed by other scientists. They also understand when a scientific claim has not been validated by the scientific method. | 120701  | <b>Biology A Unit 11: Evolution</b><br>Discussion: Observations and Inferences<br><br>Peer-to-peer, interactive discussion. Students will read and research a scientific article and share what they found with their peers. They will evaluate the text for bias and determine if the explanations they researched were valid. |
| <a href="#">SC.912.N.2.1:</a><br>Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science).<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning | 345266   | <b>Biology A Unit 1: Nature of Science</b><br>Using the Scientific Method<br><br>Text-based lesson. Students will understand the difference between questions that can be answered scientifically and those that cannot, or may be pseudoscience. Students will also learn the difference between science and pseudoscience, and how pseudoscience resembles science but lacks certain criteria or does not follow the scientific method. | 118342   | <b>Unit 1 Assignment:</b><br><br>Test: Nature of Science<br><br>Summative, multiple choice assessment. Students will answer questions identifying if scenarios can be studied scientifically or if they are pseudoscience. They will also identify the criteria that pseudoscience lacks in these scenarios and why the practices in these scenarios cannot qualify as science. |   |

|  |   |   |
|--|---|---|
| <p><a href="#">SC.912.N.3.1:</a></p> <p>Explain that a scientific theory is the culmination of many scientific investigations drawing together all the current evidence concerning a substantial range of phenomena; thus, a scientific theory represents the most powerful explanation scientists have to offer.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p> | <p>345266</p> <p><b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lesson. Students will understand how scientific theories are developed by scientists making the same observations about a natural phenomena, until it becomes an accepted explanation.</p>   | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions explaining how scientific theories are formed by observations and determine whether hypotheses in different scenarios can be considered a theory.</p>  |
| <p><a href="#">SC.912.N.2.2:</a></p> <p>Identify which questions can be answered through science and which questions are outside the boundaries of scientific investigation, such as questions addressed by other ways of knowing, such as art, philosophy, and religion.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   | <p>345266</p> <p><b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lesson. Students will understand the difference between questions that can be answered using the scientific method and those that cannot. Students will also learn that questions regarding philosophy, religion, and personal beliefs cannot be assessed using the scientific method. They will lastly understand how science is limited by these types of questions.</p>   | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions identifying whether a scenario addresses a person's opinion, belief system, religion, or philosophy, and whether it can be answered scientifically or not. They will also answer questions identifying how science is limited in answering questions based on religion, philosophy, or personal beliefs.</p> |
| <p><a href="#">SC.912.N.1.3:</a></p> <p>Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented.</p> <p>Cognitive Complexity: Level 1: Recall</p>   | <p>345266</p> <p><b>Biology A Unit 1: Nature of Science</b></p> <p>350515 Using the Scientific Method</p> <p>Interpreting Scientific Claims</p> <p>Text-based lesson. Students will learn that scientific claims must be validated through repeated experimentation finding the same data, being peer reviewed by other scientists, and by being evaluated for any bias or poor scientific practices. Students will also understand that the scientific method must be used to validate claims and how to recognize false claims.</p> | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions determining whether a scientific claim is valid based on the criteria of the evidence being peer reviewed, justified using the scientific method, or invalid due to bias, or unethical practices.</p>  |
| <p><a href="#">SC.912.N.1.4:</a></p> <p>Identify sources of information and assess their reliability according to the strict standards of scientific investigation.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   | <p>345266</p> <p><b>Biology A Unit 1: Nature of Science</b></p> <p>350515 Using the Scientific Method</p> <p>Interpreting Scientific Claims</p> <p>Text-based lessons. Students will learn which sources of information should be used in scientific research, and to support their own investigations, and which cannot be considered as unreliable.</p>   | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions determining whether a source of information is valid for supporting a scientific claim or investigation, how to identify sources that may contain bias or should not be used in scientific research, and recognize when some sources may contain bias.</p>   |

|  |  |  |
|--|--|--|
| <p><a href="#">SC.912.N.3.4:</a></p> <p>Recognize that theories do not become laws, nor do laws become theories; theories are well supported explanations and laws are well supported descriptions.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> | <p>345266</p> <p><b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lessons. Students will read the definitions of a scientific law and theory, respectively. They will also learn that scientific laws cannot become theories, and vice-versa.</p>                             | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions defining hypothesis, scientific theory, and scientific law, and will be able to identify the characteristics differentiating these three terms. They will also answer questions showing that they understand scientific laws cannot become scientific theories, and vice-versa.</p>   |
| <p><a href="#">SC.912.N.1.6:</a></p> <p>Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p>                              | <p>345629</p> <p><b>Biology A Unit 7: Nucleic Acids and Protein Synthesis</b></p> <p>Lab: RNA</p> <p>Virtual laboratory lesson. | SC.912.L.14.52  | Explain the basic functions of the human immune system, including specific and nonspecific immune response, vaccines, and antibiotics.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts  | 345596 | <b>Biology B Unit 3: Viruses and Bacteria</b>   | 118545 | <b>Unit 10 Assignment:</b><br><br>Assignment: Endocrine, Immune, and Reproductive Systems<br><br>Test: Body Systems Part II<br><br>Formative and summative, multiple choice assessment. In both assessments, students will answer questions explaining how the immune system reacts, involving both innate and adaptive responses, to a foreign pathogen. Students also will address questions explain how vaccines and antibiotics are effective against viruses and bacteria, respectively.   |
|   |  | 345611 | The First Vaccine   | 118540 |   |
|   |  | 345882 | Bacteria and Disease  |        |   |
|   |  |        | <b>Unit 10: Body Systems Part II</b><br><br>Immune System<br><br>Text-based lessons. Students will investigate how the first vaccine was developed and the physiological responses that occur when components of the immune system encounter a foreign pathogen. They will also examine the mechanisms by which antibiotics are effective against bacterial infections and vaccines are used to combat viruses. |        |   |
| <b>Standard 15: Diversity and Evolution of Living Organisms</b> |  |        |   |        |   |
| SC.912.L.15.1   | Explain how the scientific theory of evolution is supported by the fossil record, comparative anatomy, comparative embryology, biogeography, molecular biology, and observed evolutionary change.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning | 345710 | <b>Biology A Unit 11: Evolution</b>   | 118509 | <b>Unit 11 Assignments:</b><br><br>Journal Entry: Transitional Groups<br><br>Assignment: Descent with Modification<br><br>Journal Entry: Reproductive Isolation<br><br>Assignment: Evolution and Genetics<br><br>Test: Evolution<br><br>Short-response, written assessments, and summative and formative, multiple choice assessments. Students will answer questions using geological, biological, and anatomical evidence for evolution. Students also answer questions identifying evidence supporting the theory of evolution and about the scientists that contributed to the development of the theory of evolution. In the journal, students use this evidence to support the evolutionary relationship between organisms. |
|   |  | 345716 | Evidence for Evolution  | 118510 |   |
|   |  | 345717 | Primate Evolution   | 118512 |   |
|   |  |        | Evolution and Genetics  | 118495 |   |
|   |  |        | Text-based lessons. Students will learn about how the collaboration of ideas from different scientists and various types of scientific evidence led to the development of the theory of evolution.  | 118513 |   |

|               |  |        |  |        |   |
|---------------|--|--------|--|--------|---|
| SC.912.L.15.4 | Describe how and why organisms are hierarchically classified and based on evolutionary relationships.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning | 345551 | <b>Biology B Unit 2: Classification</b>  | 118436 | <b>Unit 2 Assignment:</b><br><br>Test: Classification<br><br>Summative, multiple choice assessment. Students will answer questions describing the how organisms are classified based on characteristics such as similarities in DNA and homologous structures.  |
|               |  | 345553 | The Taxonomic Hierarchy  |        |   |
|               |  |        | Phylogeny and Taxonomy Today<br><br>Text-based lessons. Students will learn that organisms are classified based on similarities of characteristics such as DNA to show how close their evolutionary relationships are. Students will also learn how Linnaeus began to develop this hierarchy and taxonomy.   |        |   |
| SC.912.L.15.5 | Explain the reasons for changes in how organisms are classified.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning                                      | 345535 | <b>Biology B Unit 2: Classification</b>  | 118436 | <b>Unit 2 Assignment:</b><br><br>Test: Classification<br><br>Summative, multiple choice assessment. Students will answer questions explaining how and why the classification of organisms has changed as tools and scientific knowledge has improved, enabling scientists to have a better understanding of the evolutionary relationships between organisms. |
|               |  | 345541 | Classification Beginnings  |        |   |
|               |  | 345551 | Carolus Linnaeus' Binomial Nomenclature  |        |   |
|               |  | 345553 | The Taxonomic Hierarchy<br><br>Phylogeny and Taxonomy Today<br><br>Text-based lessons. Students will understand how organisms are taxonomically classified and learn about the development of classification, starting with Carolus Linnaeus. They will also examine how the classification of organisms has changed since Linnaeus first developed this system. |        |   |
| SC.912.L.15.6 | Discuss distinguishing characteristics of the domains and kingdoms of living organisms.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts               | 345551 | <b>Biology B Unit 2: Classification</b>  | 118436 | <b>Unit 2 Assignment:</b><br><br>Test: Classification<br><br>Summative, multiple choice assessment. Student will answer questions determining the classification of an organism in the individual kingdoms and domains based on their characteristics.  |
|               |  | 345553 | The Taxonomic Hierarchy  |        |   |
|               |  |        | Phylogeny and Taxonomy Today<br><br>Text-based lessons. Students will learn about organisms and their characteristics in the three domains and six kingdoms. Students will also understand how to classify living organisms in this system using their defining characteristics.   |        |   |
| SC.912.L.15.8 | Describe the scientific explanations of the origin of life on Earth.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts                                  | 345709 | <b>Biology A Unit 11: Evolution</b>  | 110694 | <b>Unit 11 Assignment:</b><br><br>Assignment: Descent with Modification<br><br>Formative, multiple choice assessment. Students will identify the philosophers and scientists who developed the different theories for the origins of life on Earth and answer questions describing these theories.  |
|               |  |        | Evolution: Historical Perspectives<br><br>Text-based lesson. Students will learn about the different theories that have developed about the origin of life from the times of the ancient Greeks to present. They will also learn what the accepted theories are today.   |        |   |

|   |   |                  |   |                  |   |
|---|---|------------------|---|------------------|---|
| SC.912.L.15.10                                | Identify basic trends in hominid evolution from early ancestors six million years ago to modern humans, including brain size, jaw size, language, and manufacture of tools.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts                          | 345716           | <b>Biology A Unit 11: Evolution</b><br><br>Primate Evolution<br><br>Text-based lesson. | SC.912.L.17.4 | Describe changes in ecosystems resulting from seasonal variations, climate change and succession.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts   | 345510 | <b>Biology B Unit 1: Ecology</b>  | 118365 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students will answer questions describing how an ecosystem might be affected when a change in climate, season, or natural disaster occurs. Students also describe what occurs at different times during ecological succession.  |
|               |  | 345515 | Ecological Succession   |        |  |
|               |  | 345526 | Biomes  |        |  |
|               |  | 350498 | Biodiversity and Ecosystem Stability<br><br>Human Impacts on Planet Earth<br><br>Text-based lessons. Students will gain an understanding as to how ecosystems are influenced by changes involving the seasons, climate, and ecological succession, caused naturally and by humans.  |        |  |
| SC.912.L.17.5 | Analyze how population size is determined by births, deaths, immigration, emigration, and limiting factors (biotic and abiotic) that determine carrying capacity.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning           | 345515 | <b>Biology B Unit 1: Ecology</b>  | 118365 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students will answer questions analyzing situations where different factors, abiotic and biotic, could influence the birth and death rate, migration of organisms, limit their populations, and how these factors influence carrying capacity.  |
|               |  |        | Matter Cycling, Energy Flow, and Carrying Capacity<br><br>Text-based lesson. Students will analyze the natural and human factors, and abiotic and biotic factors, that affect carrying capacity and, as a consequence, the population size of different species in an ecosystem.  |        |  |
| SC.912.L.17.8 | Recognize the consequences of the losses of biodiversity due to catastrophic events, climate changes, human activity, and the introduction of invasive, non-native species.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning | 345510 | <b>Biology B Unit 1: Ecology</b>  | 120743 | <b>Unit 1 Assignment:</b><br><br>Required Chat: Introduction of Species in an Ecosystem<br><br>Paper: The Impact of Agricultural Practices on Ecosystems<br><br>Test: Ecology<br><br>Interactive teacher-student discussion, research paper, and summative, multiple choice assessment. In the assessment, students will answer questions that explain how the introduction of a species into a new ecosystem can have devastating effects. In the required chat, student will choose from a list a non-native, invasive species to an environment and perform research over it. They will discuss their findings with their teacher. In the paper, students will analyze the impact of agricultural practices in developed and undeveloped countries, and explain how they affect biodiversity. |
|               |  | 345515 | Ecological Succession   | 120736 |  |
|               |  | 350498 | Biodiversity and Ecosystem Stability<br><br>Human Impacts on Planet Earth<br><br>Text-based lesson. Students will read a case study showing what occurs when a species of organism is introduced into a different ecosystem. They also observe the possible negative effects of this. Students also examine how human activities can affect biodiversity, and the natural and human factors that can cause extinction events. | 118365 |  |

|                |  |        |  |        |   |
|----------------|--|--------|--|--------|---|
| SC.912.L.17.9  | Use a food web to identify and distinguish producers, consumers, and decomposers. Explain the pathway of energy transfer through trophic levels and the reduction of available energy at successive trophic levels.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345327 | <b>Biology B Unit 1: Ecology</b><br><br>Organisms and Their Environment<br><br>Matter Cycling, Energy Flow, and Carrying Capacity<br><br>Text-based lesson, diagrams, and flowcharts. Students will identify the characteristics of producers, consumers, and decomposers. They will also observe diagrams and flowcharts showing how energy levels compare for each type of organism, how biomass compares, and how energy transfers in food webs, pyramids, and chains.  | 118365 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students identify the trophic level, amount of energy available at each level, and determine how much energy decreased by answering questions about different types of organisms. Students also use biomass diagrams, food webs, food pyramids, and flowcharts to answer questions and determine whether an organism is a producer, consumer, or decomposer.   |
|                |  | 345505 |  |        |   |
| SC.912.L.17.11 | Evaluate the costs and benefits of renewable and nonrenewable resources, such as water, energy, fossil fuels, wildlife, and forests.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning  | 350498 | <b>Biology B Unit 1: Ecology</b><br><br>Human Impacts on Planet Earth<br><br>The Impact of Agricultural Practices on Ecosystems<br><br>Text-based lessons. Students read about the impact of chemically produced products like plastics, fertilizers, and fossil fuels have both societal and environmental impacts that can be positive and negative. Students also analyze how these products are monitored and conserved in both developing and developed countries.  | 118365 | <b>Unit 1 Assignment:</b><br><br>Test: Ecology<br><br>Summative, multiple choice assessment. Students answer questions about the costs and benefits of renewable and nonrenewable energy sources, and evaluate how deforestation, desertification, and other human activities can devastate ecosystems.   |
|                |  | 350499 |  |        |   |
| SC.912.L.17.13 | Discuss the need for adequate monitoring of environmental parameters when making policy decisions.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning  | 350498 | <b>Biology B Unit 1: Ecology</b><br><br>Human Impacts on Planet Earth<br><br>The Impact of Agricultural Practices on Ecosystems<br><br>Text-based lesson. Students will read about the positive and negative impacts that human beings have had on planet Earth, including conservationist methods, and how fossil fuels are harming the environment. Students will also understand that communities and countries form public policies to help preserve the environment and protect areas where natural resources are obtained. | 118365 | <b>Unit 1 Assignment:</b><br><br>Paper: The Impact of Agricultural Practices on Ecosystems<br><br>Research paper. Students will perform research on developed and developing countries determining where public policies have been made, and where they have not, to protect the environment. They will also research their own state and/or region, and explain what local, state, and federal government policies have been put into action to monitor agricultural practices while conserving resources. |
|                |  | 350499 |  |        |   |

|   |   |        |   |        |   |
|---|---|--------|---|--------|---|
| SC.912.L.17.20  | Predict the impact of individuals on environmental systems and examine how human lifestyles affect sustainability.<br><br>Cognitive Complexity: Level 3: Strategic Thinking & Complex Reasoning       | 350498 | <b>Biology B Unit 1: Ecology</b><br><br>Human Impacts on Planet Earth<br><br>The Impact of Agricultural Practices on Ecosystems<br><br>Text-based lessons. Students investigate how human activities impact all parts of an ecosystem and analyze the different lifestyles and sustainability practices humans can use to acquire needed resources without negatively impacting the environment. Students also analyze the difference of practices in developing and developed countries. | 118365 | <b>Unit 1 Assignment:</b><br><br>Paper: The Impact of Agricultural Practices on Ecosystems<br><br>Test: Ecology<br><br>Research paper and summative, multiple choice assessment. Students perform research over a developed and developing country, comparing the global impact each has on ecosystems and the local impacts of human lifestyles and sustainability practices on local ecosystems. In the assessment, students use this knowledge to answer questions regarding how a practice or lifestyle may impact the environment.   |
|   |   | 350499 |   |        |   |
| <b>Standard 18: Matter and Energy Transformations</b> |   |        |   |        |   |
| SC.912.L.18.1   | Describe the basic molecular structures and primary functions of the four major categories of biological macromolecules.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts | 345522 | <b>Biology A Unit 4: The Chemistry of Life</b><br><br>Biological Molecules<br><br>Text-based lesson. Students learn the elements found in cells, and understand the structures and function of the four biological molecules.   | 118415 | <b>Unit 4 Assignment:</b><br><br>Test: The Chemistry of Life<br><br>Summative, multiple choice assessment. Students will answer questions describing which elements are found in cells. They also answer questions showing they understand the different characteristics and functions of carbohydrates, lipids, proteins, and nucleic acids.   |
|   |   |        |   |        |   |
| SC.912.L.18.7   | Identify the reactants, products, and basic functions of photosynthesis.<br><br>Cognitive Complexity: Level 2: Basic Application of Skills & Concepts   | 345559 | <b>Biology A Unit 6: Cell Energy</b><br><br>Photosynthesis<br><br>Virtual Lab: Photosynthesis<br><br>Virtual laboratory lesson and text-based lesson including diagrams. Students will be able to determine what molecules are the reactants and products in the chemical reactions involved in photosynthesis. Students also will analyze the structure of plants and photosynthetic organisms where photosynthesis takes place.   | 118449 | <b>Unit 6 Assignment:</b><br><br>Lab Report: Photosynthesis<br><br>Activity: The Cycle of Matter<br><br>Test: Cell Energy<br><br>Lab report, fill-in-the-blank activity using a word bank, and summative, multiple choice assessment. In the lab, students will perform a virtual experiment on a hydrilla plant showing how different factors affect photosynthesis in plants. In the activity, students use a word bank to complete the step-by-step processes involved in photosynthesis. In the assessments, students will answer questions identifying the molecules, functions, and where in a plant photosynthesis occurs. |
|   |   | 345570 |   | 118447 |   |
|   |   |        |   | 118445 |   |

Students will understand why they need to perform research, to find what is already known about cellular respiration in yeast and use this research to gain an understanding of this concept before performing the lab.</p> | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will need to perform research from information sources, to find what is already known about cellular respiration in yeast to answer the pre-lab questions.</p> |
|  | 349708 | <p><b>Biology A Unit 6: Cell Energy</b></p> <p>Lab: Cellular Respiration in Yeast</p> <p>Hands-on lab lesson. Students will understand why they should plan an investigation ahead and make sure the steps of their procedure can be reproduced by other scientists.</p>  | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will perform the experiment according to the procedure in the lab lesson.</p>  |
|  | 349708 | <p><b>Biology A Unit 6: Cell Energy</b></p> <p>Lab: Cellular Respiration in Yeast</p> <p>Hands-on lab lesson. Students will understand how to use data tables to organize data so that their results can be easily understood by other scientists.</p>  | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will complete data tables complete with measurements in centimeters of the depth of bubbles and volume of gas produced during the experiment.</p>              |
|  | 349708 | <p><b>Biology A Unit 6: Cell Energy</b></p> <p>Lab: Cellular Respiration in Yeast</p> <p>Hands-on lab lesson. Students learn how to use previous knowledge from other experiments and scientific ideas to propose answers and explanations of naturally occurring phenomena.</p>  | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will form a hypothesis for what they expect to find when yeast cultures are placed in different concentrations of sucros.</p>                                  |
|  |        |   |        |   |

|  |        |   |        |  |
|--|--------|---|--------|--|
| <p>8. generate explanations that explicate or describe natural phenomena (inferences),</p> <p>9. use appropriate evidence and reasoning to justify these explanations to others,</p> <p>10. communicate results of scientific investigations, and</p> <p>11. evaluate the merits of the explanations produced by others.</p> | 349708 | <p><b>Biology A Unit 6: Cell Energy</b></p> <p>Lab: Cellular Respiration in Yeast</p> <p>Hands-on lab lesson. Students will explain whether the data found from experimentation, and the information from their research, supports their hypothesis, in their conclusions and post-lab questions.</p>   | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will explain whether the data found from experimentation, and the information from their research, supports their hypothesis, in their conclusions and post-lab questions.</p>  |
|  | 349708 | <p><b>Biology A Unit 6: Cell Energy</b></p> <p>Lab: Cellular Respiration in Yeast</p> <p>Hands-on lab lesson. Students will understand how to convey their experimental data verbally in an analysis, conclusion, or explanation to other scientists and their peers.</p>   | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will explain the relationship between the different amounts of carbon dioxide produced and the concentration of sucrose in the test tubes, and justify this explanation with experimental data.</p>                     |
|  | 349708 | <p><b>Biology A Unit 6: Cell Energy</b></p> <p>Lab: Cellular Respiration in Yeast</p> <p>Hands-on lab lesson. Students will observe how scientific results are communicated by research papers, journals, and peer reviewed articles between scientists. Students will also learn why it is important for scientists to share scientific results with one another to further knowledge about a naturally occurring phenomenon.</p>                                | 120045 | <p><b>Unit 6 Assignment:</b></p> <p>Lab Report: Cellular Respiration in Yeast</p> <p>Hands-on lab report. Students will share their results for the experiment in the conclusions and post-lab responses in the lab report.</p>  |
|  | 350515 | <p><b>Biology A Unit 1 The Nature of Science</b></p> <p>Interpreting Scientific Claims</p> <p>Text-based lesson including multimedia presentations, practice quiz, and practice questions. Students learn how to evaluate different scientific claims and explanations to see if they are valid, contain bias, and have been peer reviewed by other scientists. They also understand when a scientific claim has not been validated by the scientific method.</p> | 120701 | <p><b>Biology A Unit 11: Evolution</b></p> <p>Discussion: Observations and Inferences</p> <p>Peer-to-peer, interactive discussion. Students will read and research a scientific article and share what they found with their peers. They will evaluate the text for bias and determine if the explanations they researched were valid.</p> |
| <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |        |   |        |  |

|  |  |  |   |
|--|--|--|---|
| <p><a href="#">SC.912.N.2.1:</a></p> <p>Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science).</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |  | <p>345266 <b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lesson. Students will understand the difference between questions that can be answered scientifically and those that cannot, or may be pseudoscience. Students will also learn the difference between science and pseudoscience, and how pseudoscience resembles science but lacks certain criteria or does not follow the scientific method.</p>  | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions identifying if scenarios can be studied scientifically or if they are pseudoscience. They will also identify the criteria that pseudoscience lacks in these scenarios and why the practices in these scenarios cannot qualify as science.</p>  |
| <p><a href="#">SC.912.N.3.1:</a></p> <p>Explain that a scientific theory is the culmination of many scientific investigations drawing together all the current evidence concerning a substantial range of phenomena; thus, a scientific theory represents the most powerful explanation scientists have to offer.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p> |  | <p>345266 <b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lesson. Students will understand how scientific theories are developed by scientists making the same observations about a natural phenomena, until it becomes an accepted explanation.</p>   | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions explaining how scientific theories are formed by observations and determine whether hypotheses in different scenarios can be considered a theory.</p>  |
| <p><a href="#">SC.912.N.2.2:</a></p> <p>Identify which questions can be answered through science and which questions are outside the boundaries of scientific investigation, such as questions addressed by other ways of knowing, such as art, philosophy, and religion.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>   |  | <p>345266 <b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lesson. Students will understand the difference between questions that can be answered using the scientific method and those that cannot. Students will also learn that questions regarding philosophy, religion, and personal beliefs cannot be assessed using the scientific method. They will lastly understand how science is limited by these types of questions.</p>   | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions identifying whether a scenario addresses a person's opinion, belief system, religion, or philosophy, and whether it can be answered scientifically or not. They will also answer questions identifying how science is limited in answering questions based on religion, philosophy, or personal beliefs.</p> |
| <p><a href="#">SC.912.N.1.3:</a></p> <p>Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented.</p> <p>Cognitive Complexity: Level 1: Recall</p>   |  | <p>345266 <b>Biology A Unit 1: Nature of Science</b></p> <p>350515 Using the Scientific Method</p> <p>interpreting Scientific Claims</p> <p>Text-based lesson. Students will learn that scientific claims must be validated through repeated experimentation finding the same data, being peer reviewed by other scientists, and by being evaluated for any bias or poor scientific practices. Students will also understand that the scientific method must be used to validate claims and how to recognize false claims.</p> | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions determining whether a scientific claim is valid based on the criteria of the evidence being peer reviewed, justified using the scientific method, or invalid due to bias, or unethical practices.</p>  |

|  |  |  |  |
|--|--|--|--|
| <p><a href="#">SC.912.N.1.4:</a></p> <p>Identify sources of information and assess their reliability according to the strict standards of scientific investigation.</p> <p>Cognitive Complexity: Level 3: Strategic Thinking &amp; Complex Reasoning</p>                                 |  | <p>345266 <b>Biology A Unit 1: Nature of Science</b></p> <p>350515 Using the Scientific Method</p> <p>interpreting Scientific Claims</p> <p>Text-based lessons. Students will learn which sources of information should be used in scientific research, and to support their own investigations, and which cannot be considered as unreliable.</p> | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions determining whether a source of information is valid for supporting a scientific claim or investigation, how to identify sources that may contain bias or should not be used in scientific research, and recognize when some sources may contain bias.</p>                          |
| <p><a href="#">SC.912.N.3.4:</a></p> <p>Recognize that theories do not become laws, nor do laws become theories; theories are well supported explanations and laws are well supported descriptions.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p> |  | <p>345266 <b>Biology A Unit 1: Nature of Science</b></p> <p>Using the Scientific Method</p> <p>Text-based lessons. Students will read the definitions of a scientific law and theory, respectively. They will also learn that scientific laws cannot become theories, and vice-versa.</p>  | <p>118342</p> <p><b>Unit 1 Assignment:</b></p> <p>Test: Nature of Science</p> <p>Summative, multiple choice assessment. Students will answer questions defining hypothesis, scientific theory, and scientific law, and will be able to identify the characteristics differentiating these three terms. They will also answer questions showing that they understand scientific laws cannot become scientific theories, and vice-versa.</p> |
| <p><a href="#">SC.912.N.1.6:</a></p> <p>Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied.</p> <p>Cognitive Complexity: Level 2: Basic Application of Skills &amp; Concepts</p>                              |  | <p>345629 <b>Biology A Unit 7: Nucleic Acids and Protein Synthesis</b></p> <p>Lab: RNA</p> <p>Virtual laboratory lesson. Students learn how inferences are drawn from observations of natural phenomena.</p>   | <p>120701</p> <p><b>Biology A Unit 11: Evolution</b></p> <p>Discussion: Observations and Inferences</p> <p>Peer-to-peer, interactive discussion. Students will read and research a scientific article and provide at least one observation and inference, respectively, and explain how these are used to gather scientific evidence.</p>  |
| <p><a href="#">HE.912.C.1.3:</a></p> <p>Evaluate how environment and personal health are interrelated.</p>   |  | <p>345751 <b>Biology A Unit 12: Genetic Engineering</b></p> <p>Somatic and Sex Cell Mutations</p> <p>Text-based lesson. Students will read that genetics, environmental contaminants, and lifestyle choices can affect a human's health.</p>   | <p>120741</p> <p><b>Unit 12 Assignment:</b></p> <p>Required Chat: Impact of Environmental Factors on Health</p> <p>Interactive, student-teacher discussion. Students will answer questions stating whether a person's health problems are due to genetics or environmental factors and share this with their teacher. Students will also discuss different factors that influence the health of humans and the community.</p>              |

|                   |   |        |   |        |   |
|-------------------|---|--------|---|--------|---|
| HE.912.C.1.4:     | Analyze how heredity and family history can impact personal health.   | 345698 | <b>Biology A Unit 10: Human Heredity</b>  | 118490 | <b>Unit 10 Assignment:</b>  |
|                   |   | 345751 | Human Genetic Disorders<br><br><b>Unit 12: Genetic Engineering</b><br><br>Somatic and Sex Cell Mutations<br><br>Text-based lesson. Students will read that genetics can affect a human's health and that some diseases can be hereditary.                         | 118502 | Assignment: Genetic Disorders<br><br><b>Unit 12 Assignment:</b><br><br>Assignment: Selective Breeding and Types of Mutations<br><br>Formative, multiple choice assessments. Students will answer questions explaining how genetic factors that can lead to harmful mutations in humans and be inherited from parent organisms. Students will also identify hereditary diseases and how they impact the well being of offspring. |
| HE.912.C.1.8:     | Analyze strategies for prevention, detection, and treatment of communicable and chronic diseases.   | 345587 | <b>Biology B Unit 3: Viruses and Bacteria</b>   | 118549 | <b>Unit 10 Assignment:</b>  |

|  |   |
|--|---|
|  | 5. plan investigations, Remarks/Examples: Design and evaluate a scientific investigation.   |
|  | 6. use tools to gather, analyze, and interpret data (this includes the use of measurement in metric and other systems, and also the generation and interpretation of graphical representations of data, including data tables and graphs), Remarks/Examples: Collect data or evidence in an organized way. Properly use instruments, equipment, and materials (e.g., scales, probeware, meter sticks, microscopes, computers) including set-up, calibration, technique, maintenance, and storage. |
|  | 7. pose answers, explanations, or descriptions of events,   |
|  | 8. generate explanations that explicate or describe natural phenomena (inferences),   |
|  | 9. use appropriate evidence and reasoning to justify these explanations to others,  |
|  | 10. communicate results of scientific investigations, and   |
|  | 11. evaluate the merits of the explanations produced by others.   |
|  | * Common Core State Standards (CCSS) Connections for 6-12 Literacy in Science For Students in Grades 9-10   |

|        |   |   |

|--------|--|--|
|        | <b>Chemistry A Unit 1: The Study of Chemistry</b><br>Effects of Science on Everyday Life<br>Text-based lesson, slideshow, and interactive quiz. Students will understand how society and government policies are made based on knowledge gained after the occurrence of a natural disaster. They will observe how policies changed by clicking through a presentation and will take a practice quiz assessing their knowledge of how policies were formed after the event. | <b>Unit 1 Assignment:</b><br>Test: The Study of Chemistry<br>Summative, multiple choice assessment. Students will answer questions explaining how science helps society make decisions and governments set policies, and procedures in different scenarios.  |
| 345046 | <b>Chemistry A Unit 1: The Study of Chemistry</b>  | 118396   |
| 346050 | <b>Chemistry A Unit 1: The Study of Chemistry</b><br>346051 The Methods of Science<br>Lab: The Scientific Method<br>Text-based and hands-on lab lesson. Students will learn the definition of science and investigate the methods scientists use to explain naturally occurring phenomena.   | 118603<br><b>Unit 1 Assignment:</b><br>Lab Report: The Scientific Method<br>Hands-on lab report. Students will use the scientific method to acquire scientific method showing the boiling point of water and explain any deviations.   |
| 351847 | <b>Chemistry A Unit 1: The Study of Chemistry</b><br>Ways of Knowing<br>Text-based lesson. Students will learn to identify questions that can and cannot be answered using the scientific method. They will learn how to distinguish between science and pseudosciences, such as religion, opinions, and philosophy.   | 118936<br><b>Unit 1 Assignment:</b><br>Test: The Study of Chemistry<br>Summative, multiple choice assessment. Students will answer questions determining whether a scenario, or topic of study, is an example of science or pseudoscience. Students must also identify whether an observation or question can or cannot be answered by scientific means. |
| 346093 | <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br>Atomic Models<br>Text-based lesson. Students will analyze the development of atomic theory and how ideas built upon one another from the times of the ancient Greeks to present.  | 118623<br><b>Unit 4 Assignment:</b><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br>Summative, multiple choice assessment. Students will answer questions describing how atomic theory developed from the times of Ancient Greece to present.   |
| 346050 | <b>Chemistry A Unit 1: The Study of Chemistry</b>  |  |
| 346051 | The Methods of Science<br>Lab: The Scientific Method<br>Text-based lesson. Students will understand how scientific laws are developed by scientists through experimentation and investigations, and are recognized to be true throughout the universe, though do not explain natural phenomena.  | <b>Unit 1 Assignment:</b><br>Test: The Study of Chemistry<br>Summative, multiple choice assessment. Students will answer questions explaining the limitations of what scientific laws can explain regarding natural phenomena, and that they are universally recognized.   |

|                               |   |   |   |
|-------------------------------|---|---|---|
| <a href="#">SC.912.N.1.4:</a> | Identify sources of information and assess their reliability according to the strict standards of scientific investigation.   | 351847 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Ways of Knowing<br><br>Text-based lesson. Students will learn how to identify whether sources of information and scientific studies are reliable and when they may contain bias. They will also learn how to determine the validity of experimental data and scientific claims.   | <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions determining whether a source of information or a set of experimental data is reliable in different scenarios. Students will also assess whether a source of information is valid or contains bias in the questions.  |
| <a href="#">SC.912.N.2.4:</a> | Explain that scientific knowledge is both durable and robust and open to change. Scientific knowledge can change because it is often examined and re-examined by new investigations and scientific argumentation. Because of these frequent examinations, scientific knowledge becomes stronger, leading to its durability.   | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that scientific knowledge can change as new ideas, technology, and developments are created by scientists, building upon previous knowledge. This also enables scientists to strengthen or further support existing theories and laws.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions containing examples and scenarios where scientific knowledge changed or could change with the development of new technology, idea, and advancements in the different fields of science.   |
| <a href="#">SC.912.N.1.5:</a> | Describe and provide examples of how similar investigations conducted in many parts of the world result in the same outcome.  | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>346051 The Methods of Science<br><br>Lab: The Scientific Method<br><br>Text-based lesson. Students will read that scientific experiments, when repeated by other scientists any where else in the world, should yield the same results in order for the results to be valid.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions showing that they understand that, for scientific results to be recognized as valid, the results should be repeatable by scientists any where in the world.   |
| <a href="#">SC.912.N.2.5:</a> | Describe instances in which scientists' varied backgrounds, talents, interests, and goals influence the inferences and thus the explanations that they make about observations of natural phenomena and describe that competing interpretations (explanations) of scientists are a strength of science as they are a source of new, testable ideas that have the potential to add new evidence to support one or another of the explanations. | 346053 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Branches of Chemistry<br><br>Text-based lesson. Students will investigate the different fields of science and what scientists study in them. Students will also understand that, in order to completely understand a natural phenomena, it takes several scientists from different fields working together and gathering evidence to explain why an event occurs. | 118604 <b>Unit 1 Assignment:</b><br><br>118396 Paper: Branches of Chemistry<br><br>Test: The Study of Chemistry<br><br>Research paper and summative, multiple choice assessment. In the paper, students will research a career involved in chemistry and explain what backgrounds a person needs to practice in that career. In the assessment, students will answer questions describing instances in which scientists from several fields of science would have to come together to fully explain a natural phenomena or event. |
| <a href="#">SC.912.N.3.5:</a> | Describe the function of models in science, and identify the wide range of models used in science.  | 346093 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lesson including figures and multimedia. Students will identify the different models used during scientific investigations, and how they represent atoms, and in what situations these models should be used. Students will also see how models organize data.  | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessment. Students will identify different types of models representing atoms and molecules, and answer questions explaining when using these models are appropriate. Students will also explain how models can help develop theories as in the case of the atomic theory.   |

|                                |  |  |   |
|--------------------------------|--|--|---|
| <a href="#">SC.912.N.1.6:</a>  | Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied.   | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will learn the definition of an observation and inference, and will analyze examples of each. They will also learn how to distinguish between the two.   | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions where they provide inferences for a given observation.  |
| <a href="#">SC.912.N.1.7:</a>  | Recognize the role of creativity in constructing scientific questions, methods and explanations.   | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that creativity plays a pivotal role in the furthering of scientific knowledge.  | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions explaining why scientists must be creative in forming new scientific ideas.   |
| <a href="#">SC.912.P.10.1:</a> | Differentiate among the various forms of energy and recognize that they can be transformed from one form to others.  | 345714 <b>Chemistry B Unit 3: Chemical Thermodynamics</b><br><br>Laws of Thermodynamics<br><br>Text-based lesson. Students will read about energy and how it can transform from one form to another, but cannot be created nor destroyed.  | 118494 <b>Unit 3 Assignment:</b><br><br>Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students will answer questions determining what forms of energy transformed into another, and identify the different forms of energy that exist.  |
| <a href="#">SC.912.P.8.1:</a>  | Differentiate among the four states of matter.   | 346060 <b>Chemistry A Unit 2: Matter and Energy</b><br><br>States of Matter and Physical and Chemical Changes<br><br>Text-based lesson including diagrams. Students will learn the characteristics of each state of matter and learn how to differentiate between each.  | 118605 <b>Unit 2 Assignment:</b><br><br>Test: Matter and Energy<br><br>Summative, multiple choice assessment. Students will answer questions by using the characteristics learned in the lesson. They will determine what state of matter a substance is in using these characteristics.  |
| <a href="#">SC.912.P.8.2:</a>  | Differentiate between physical and chemical properties and physical and chemical changes of matter.  | 346058 <b>Chemistry A Unit 2: Matter and Energy</b><br><br>Matter and its Properties<br><br>Text-based lesson. Students will learn the difference between physical and chemical properties and changes of substances.  | 118605 <b>Unit 2 Assignment:</b><br><br>Test: Matter and Energy<br><br>Summative, multiple choice assessment. Students will answer questions explaining whether a chemical or physical change in the state of matter has taken place and identify chemical and physical characteristics of substances.  |
| <a href="#">SC.912.P.8.3:</a>  | Explore the scientific theory of atoms (also known as atomic theory) by describing changes in the atomic model over time and why those changes were necessitated by experimental evidence. | 346093 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lessons including figures and diagrams. Students learn how the atomic model progressed over time and became increasingly accurate due to the contributions of multiple physicists. Students will also learn the structure, composition, and behavior of atoms and study how those different components interact with each other. | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessments. Students will answer questions describing the historic development of modern atomic theory. They will also identify the scientists and models they created that contributed to its development. Student also address the charges and masses of subatomic particles. They will also identify the location and number of subatomic particles in different elements. |

|                                |  |   |  |
|--------------------------------|--|---|--|
| <a href="#">SC.912.P.8.4.</a>  | Explore the scientific theory of atoms (also known as atomic theory) by describing the structure of atoms in terms of protons, neutrons and electrons, and differentiate among these particles in terms of their mass, electrical charges and locations within the atom. | 346095 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Structure<br><br>Text-based lessons including figures and diagrams. Students learn about protons, neutrons, and electrons in terms of their mass, location within the atom, and electrical charges. Students also learn the definition of an amu and the mass of each subatomic particle using these units.  | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessments. Students will answer questions describing subatomic particles, and identifying their mass, location in an atom, other subatomic particles such as quarks, and their individual charges.  |
| <a href="#">SC.912.P.8.5:</a>  | Relate properties of atoms and their position in the periodic table to the arrangement of their electrons.   | 346099 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Organizing the Elements Part 2<br><br>Text-based lesson including interactive diagram of the periodic table. Students will investigate how the properties of atoms, including their atomic number and electronic arrangement, determine their position on the periodic table.   | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessments. Students will answer questions using the periodic table that relates properties of groups, rows, and individual elements to their location on the periodic table. Students will also determine the electronic arrangement of elements according to their position on the periodic table. |
| <a href="#">SC.912.P.10.5:</a> | Relate temperature to the average molecular kinetic energy.  | 346075 <b>Chemistry A Unit 3: Measurement and Chemical Calculation</b><br><br>The International System of Units<br><br>Text-based lesson. Students will understand the relationship between temperature and average kinetic energy.   | 118614 <b>Unit 3 Assignment:</b><br><br>Test: Measurement and Chemical Calculation<br><br>Summative, multiple choice assessment. Students will answer questions showing they understand the relationship between average kinetic energy and temperature involving different forms of heat and energy transformations.  |
| <a href="#">SC.912.P.8.6:</a>  | Distinguish between bonding forces holding compounds together and other attractive forces, including hydrogen bonding and van der Waals forces.  | 345547 <b>Chemical B Unit 1: Chemical Bonding</b><br><br>Introduction to Chemical Bonding<br><br>Text-based lesson including diagrams and figures. Students will gain an understanding of the intramolecular and intermolecular bonding forces that hold molecules and compounds together.  | 118456 <b>Unit 1 Assignment:</b><br><br>Test: Chemical Bonding<br><br>Summative, multiple choice assessment. Students will answer questions determining whether bonds are intermolecular or intramolecular, the strength of the bond, and the type of bonds involved in holding together the atoms of different molecules.   |
| <a href="#">SC.912.P.10.6:</a> | Create and interpret potential energy diagrams, for example: chemical reactions, orbits around a central body, motion of a pendulum.   | 345726 <b>Chemical B Unit 3: Chemical Thermodynamics</b><br><br>Heat Capacity and Enthalpy<br><br>Text-based lesson with tables, equations, practice questions, and diagrams. Students will learn that chemical reactions can be graphically represented using potential energy diagrams to describe whether an exothermic or endothermic reaction has occurred, will create a diagram in the practice questions, and learn how to interpret what type of reaction occurred by looking at a potential energy diagram. | 118496 <b>Unit 3 Assignment:</b><br><br>Assignment: Chemical Thermodynamics<br><br>Formative, multiple choice assessment. Students will use a table containing the standard enthalpy change of formations of different chemical compounds to interpret potential energy diagrams.  |

|--------------------------------|--|--|--|
| <a href="#">SC.912.P.8.7:</a>  | Interpret formula representations of molecules and compounds in terms of composition and structure.                              | 346128 <b>Chemistry B Unit 5: Ions and Ionic Compounds</b><br><br>346132 Writing Formulas for Binary Compounds<br><br>346135 Naming Binary Ionic Compounds<br><br>346140 Ternary Ionic Compounds<br><br>346142 <b>Unit 6: Molecular compounds, Acids, and Bases</b><br>Naming Binary Molecular Compounds<br>Writing Formulas for Binary Molecular Compounds<br><br>Text-based lessons including figures, diagrams, and practice problems. Students learn how to determine and write ionic and molecular formulas for compounds and molecules. Students also learn to identify the bonds and atoms contained in each based on bond characteristics. | 118635 <b>Unit 5 Assignment:</b><br><br>118649 Test: Ions and Ionic Compounds<br><br><b>Unit 6 Assignment:</b><br><br>Test: Molecular Compounds, Acids, and Bases<br><br>Summative, multiple choice assessments. Students answer questions interpreting the name or formula for a given molecular or ionic compound. Students also identify the bond structure based on characteristics learned in previous material.                |
| <a href="#">SC.912.P.10.7:</a> | Distinguish between endothermic and exothermic chemical processes.   | 345726 <b>Chemistry B Unit 3: Chemical Thermodynamics</b><br><br>Heat Capacity and Enthalpy<br><br>Text-based lesson. Students will learn how to determine whether a chemical reaction is exothermic or endothermic, both qualitatively and quantitatively.  | 118494 <b>Unit 3 Assignment:</b><br><br>Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students answer questions differentiating between exothermic and endothermic reactions using qualitative and quantitative analyses.  |
| <a href="#">SC.912.P.8.8:</a>  | Characterize types of chemical reactions, for example: redox, acid-base, synthesis, and single and double replacement reactions. | 346174 <b>Chemistry A Unit 9: Chemical Equations</b><br><br>346181 Chemical Reactions<br><br>345780 Types of Reactions<br><br>345794 <b>Chemistry B Unit 4: Chemical Kinetics and Electrochemistry</b><br><br>Redox Reactions<br><br>Acid-Base Theory<br><br>Text-based lessons including practice problems. Students will understand the different types of chemical reactions and how to identify what reactions have occurred based on balanced chemical equations.   | 118666 <b>Chemistry A Unit 9 Assignment:</b><br><br>118504 Test: Chemical Equations<br><br><b>Chemistry B Unit 4 Assignment:</b><br><br>Test: Chemical Kinetics and Electrochemistry<br><br>Summative, multiple choice assessments. Students answer questions that determine the type of reaction that has occurred after balancing chemical equations and using characteristics of each type of reaction learned from the material. |
| <a href="#">SC.912.P.8.9:</a>  | Apply the mole concept and the law of conservation of mass to calculate quantities of chemicals participating in reactions.      | 346153 <b>Chemistry A Unit 7: The Mole Concept</b><br><br>The Mole<br><br>Text-based lesson including practice problems. Students will learn the definition of a mole and understand that the law of conservation of mass applies when calculating the moles of products and reactants formed during chemical reactions.   | 118655 <b>Unit 7 Assignment:</b><br><br>Test: The Mole Concept<br><br>Summative, multiple choice assessment. Students will calculate moles, convert from grams to moles, and determine molar volumes of compounds involved in chemical reactions while applying the law of conservation of mass in their calculations.   |

|                                 |   |   |   |
|---------------------------------|---|---|---|
| <a href="#">SC.912.P.10.9:</a>  | Describe the quantization of energy at the atomic level.                        | 345626 <b>Chemical B Unit 1: Chemical Bonding</b><br><br>Electron Configuration<br><br>Text-based lesson including figures, diagrams, and practice problems. Students will understand how electrons occupy and move from orbital to orbital based on their energy state, and understand how to apply Planck's constant.   | 118456 <b>Unit 1 Assignment:</b><br><br>Test: Chemical Bonding<br><br>Summative, multiple choice assessment. Students will answer questions describing the energy of an electron in a given orbital and calculate the energy of a photon using derivations of Planck's equation.  |
| <a href="#">SC.912.P.12.10:</a> | Interpret the behavior of ideal gases in terms of kinetic molecular theory.     | 345174 <b>Chemical B Unit 3: Chemical Thermodynamics</b><br><br>345742 <b>Laws of Thermodynamics</b><br><br>Gas Laws<br><br>Text-based lessons including practice problems. Students will understand how to explain gas laws according to the kinetic molecular theory. Students will also learn how to calculate the pressure, volume, and temperature of gases using the ideal gas law equation.  | 118494 <b>Unit 3 Assignment:</b><br><br>Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students answer questions explaining gas laws according to the kinetic molecular theory and calculate the pressure, temperature, volume, and partial pressure of different gases.   |
| <a href="#">SC.912.P.12.11:</a> | Describe phase transitions in terms of kinetic molecular theory.                | 346060 <b>Chemistry A Unit 2: Matter and Energy</b><br><br>States of Matter and Physical and Chemical Changes<br><br>Text-based lesson. Students will learn how the kinetic molecular theory describes the characteristics of the states of matter. They will learn to apply this theory to changes in the states of matter.  | 118605 <b>Unit 2 Assignment:</b><br><br>Test: Matter and Energy<br><br>Summative, multiple choice assessment. Students will describe changes in the states of matter using the kinetic molecular theory and answer questions showing they understand the basic assumptions of the theory.   |
| <a href="#">SC.912.P.8.11:</a>  | Relate acidity and basicity to hydronium and hydroxyl ion concentration and pH. | 345801 <b>Chemistry B Unit 5: pH and Buffering</b><br><br>345816 <b>pH and pOH</b><br><br>Lab: pH<br><br>Text-based lesson including practice problems, and a hands-on lab lesson. Students will learn the properties and characteristics of acids and bases. They will also determine whether a substance is an acid, base, and/or salt by whether hydronium or hydroxyl ions are present, and by pH levels and learn how to calculate these values. | <b>Unit 5 Assignments:</b><br><br>Lab Report: pH<br><br>Test: pH and Buffering<br><br>Summative, multiple choice assessment and hands-on lab report. Students will answer questions identifying the acidity or basicity of a substance based on hydronium and hydroxyl concentrations, whether these were produced, and by analyzing pH levels of a substance. Students will also calculate the concentrations of hydroxyl and hydronium. Students also complete a hands-on lab using a pH indicator to determine if common substances are acidic or basic based on a color change. |
| <a href="#">SC.912.P.10.12:</a> | Differentiate between chemical and nuclear reactions.                           | 345845 <b>Chemistry B Unit 7: Nuclear and Environmental Chemistry</b><br><br>Nuclear Fusion and Fission<br><br>Text-based lesson. Students will learn the difference in energy and processes involved in chemical and nuclear reactions.  | 118533 <b>Unit 7 Assignment:</b><br><br>Test: Nuclear and Environmental Chemistry<br><br>Summative, multiple choice assessment. Students answer questions differentiating between the atoms, energy, processes, and characteristics of chemical and nuclear reactions.  |

| <a href="#">SC.912.P.12.13:</a>    | Explain the concept of dynamic equilibrium in terms of reversible processes occurring at the same rates.  | 345754 <b>Chemistry B Unit 4: Chemical Kinetics and Electrochemistry</b><br><br>Introduction to Kinetics and Electrochemistry<br><br>Text-based lesson including graphs, diagrams, and practice problems. Students read text and analyze graphs explaining that chemical reactions do not always go to completion, and when reactants and products are in chemical equilibrium. They also learn how to determine if a reaction is reversible or irreversible. | 118504 <b>Unit 4 Assignment:</b><br><br>Test: Chemical Kinetics and Electrochemistry<br><br>Summative, multiple choice assessment. Students answer questions determining if a reaction is reversible or irreversible, and what factors contributed to this.   |
| <a href="#">SC.912.P.10.18:</a>    | Explore the theory of electromagnetism by comparing and contrasting the different parts of the electromagnetic spectrum in terms of wavelength, frequency, and energy, and relate them to phenomena and applications.   | 345626 <b>Chemistry B Unit 1: Chemical Bonding</b><br><br>Electron Configuration<br><br>Text-based lesson with diagrams and practice questions. Students read text and examine diagrams relating the part of the electromagnetic spectrum to wavelength, frequency, visible and nonvisible waves, and describing how waves are applied in a real world setting.   | 120706 <b>Unit 1 Assignments:</b><br><br>118456 Lab Report: The Photoelectric Effect<br><br>Test: Chemical Bonding<br><br>Virtual lab activity and summative, multiple choice assessment. In the virtual lab, students will complete an activity where they identify an element based on the light color produced when a metal emits a photon when it is exposed to a certain frequency of light. In the test, students will answer questions relating different portions of the electromagnetic spectrum based on wavelengths, frequencies, and energies at which metals emit photons. |
| <a href="#">MACC.912.F-IF.3.7:</a> | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.<br><br>a. Graph linear and quadratic functions and show intercepts, maxima, and minima.<br><br>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.<br><br>c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.<br><br>d. Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.<br><br>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude. |   |   |
| <a href="#">MACC.912.N-Q.1.1:</a>  | Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.   |   |   |
| <a href="#">MACC.912.N-Q.1.3:</a>  | Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.   |   |   |

|                     |  |
|---------------------|--|
| LACC.1112.RST.1.1:  | Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.   |
| LACC.1112.RST.1.3:  | Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks; analyze the specific results based on explanations in the text.  |
| LACC.1112.RST.2.4:  | Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 11–12 texts and topics.   |
| LACC.1112.RST.3.7:  | Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem.  |
| LACC.1112.RST.4.10: | By the end of grade 12, read and comprehend science/technical texts in the grades 11–12 text complexity band independently and proficiently.   |
| LACC.1112.WHST.1.2: | Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes. <ul style="list-style-type: none"> <li>a. Introduce a topic and organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.</li> <li>b. Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.</li> <li>c. Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.</li> <li>d. Use precise language, domain-specific vocabulary and techniques such as metaphor, simile, and analogy to manage the complexity of the topic; convey a knowledgeable stance in a style that responds to the discipline and context as well as to the expertise of likely readers.</li> <li>e. Provide a concluding statement or section that follows from and supports the information or explanation provided (e.g., articulating implications or the significance of the topic).</li> </ul> |
| LACC.1112.WHST.3.9: | Draw evidence from informational texts to support analysis, reflection, and research.  |

**Chemistry A Unit 4: Atomic Models and the Periodic Table**

Paper: Carbon-14 Dating

Text-based lesson. Students will analyze a scientific text over cite evidence from several texts to create a short response and a research paper.

**Unit 4 Assignment:**

Paper: Carbon-14 Dating

| <a href="#">SC.912.N.2.4:</a> | Explain that scientific knowledge is both durable and robust and open to change. Scientific knowledge can change because it is often examined and re-examined by new investigations and scientific argumentation. Because of these frequent examinations, scientific knowledge becomes stronger, leading to its durability.   | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that scientific knowledge can change as new ideas, technology, and developments are created by scientists, building upon previous knowledge. This also enables scientists to strengthen or further support existing theories and laws.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions containing examples and scenarios where scientific knowledge changed or could change with the development of new technology, idea, and advancements in the different fields of science.  |
| <a href="#">SC.912.N.1.5:</a> | Describe and provide examples of how similar investigations conducted in many parts of the world result in the same outcome.  | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>346051 The Methods of Science<br><br>Lab: The Scientific Method<br><br>Text-based lesson. Students will read that scientific experiments, when repeated by other scientists anywhere else in the world, should yield the same results in order for the results to be valid.   | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions showing that they understand that, for scientific results to be recognized as valid, the results should be repeatable by scientists anywhere in the world.   |
| <a href="#">SC.912.N.2.5:</a> | Describe instances in which scientists' varied backgrounds, talents, interests, and goals influence the inferences and thus the explanations that they make about observations of natural phenomena and describe that competing interpretations (explanations) of scientists are a strength of science as they are a source of new, testable ideas that have the potential to add new evidence to support one or another of the explanations. | 346053 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>118604 <b>Unit 1 Assignment:</b><br><br>118396 Paper: Branches of Chemistry<br><br>Text-based lesson. Students will investigate the different fields of science and what scientists study in them. Students will also understand that, in order to completely understand a natural phenomena, it takes several scientists from different fields working together and gathering evidence to explain why an event occurs. | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Research paper and summative, multiple choice assessment. In the paper, students will research a career involved in chemistry and explain what backgrounds a person needs to practice in that career. In the assessment, students will answer questions describing instances in which scientists from several fields of science would have to come together to fully explain a natural phenomena or event. |

|                                |  |  |   |
|--------------------------------|--|--|---|
| <a href="#">SC.912.N.3.5:</a>  | Describe the function of models in science, and identify the wide range of models used in science.                             | 346093 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lesson including figures and multimedia. Students will identify the different models used during scientific investigations, and how they represent atoms, and in what situations these models should be used. Students will also see how models organize data. | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessment. Students will identify different types of models representing atoms and molecules, and answer questions explaining when using these models are appropriate. Students will also explain how models can help develop theories as in the case of the atomic theory. |
| <a href="#">SC.912.N.1.6:</a>  | Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied. | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will learn the definition of an observation and inference, and will analyze examples of each. They will also learn how to distinguish between the two.   | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions where they provide inferences for a given observation.  |
| <a href="#">SC.912.N.1.7:</a>  | Recognize the role of creativity in constructing scientific questions, methods and explanations.                               | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that creativity plays a pivotal role in the furthering of scientific knowledge.  | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions explaining why scientists must be creative in forming new scientific ideas.   |
| <a href="#">SC.912.P.10.1:</a> | Differentiate among the various forms of energy and recognize that they can be transformed from one form to others.            | 345714 <b>Chemistry B Unit 3: Chemical Thermodynamics</b><br><br>Laws of Thermodynamics<br><br>Text-based lesson. Students will read about energy and how it can transform from one form to another, but cannot be created nor destroyed.  | 118494 <b>Unit 3 Assignment:</b><br><br>Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students will answer questions determining what forms of energy transformed into another, and identify the different forms of energy that exist.  |
| <a href="#">SC.912.P.8.1:</a>  | Differentiate among the four states of matter.   | 346060 <b>Chemistry A Unit 2: Matter and Energy</b><br><br>States of Matter and Physical and Chemical Changes<br><br>Text-based lesson including diagrams. Students will learn the characteristics of each state of matter and learn how to differentiate between each.  | 118605 <b>Unit 2 Assignment:</b><br><br>Test: Matter and Energy<br><br>Summative, multiple choice assessment. Students will answer questions by using the characteristics learned in the lesson. They will determine what state of matter a substance is in using these characteristics.  |
| <a href="#">SC.912.P.8.2:</a>  | Differentiate between physical and chemical properties and physical and chemical changes of matter.                            | 346058 <b>Chemistry A Unit 2: Matter and Energy</b><br><br>Matter and Its Properties<br><br>Text-based lesson. Students will learn the difference between physical and chemical properties and changes of substances.  | 118605 <b>Unit 2 Assignment:</b><br><br>Test: Matter and Energy<br><br>Summative, multiple choice assessment. Students will answer questions explaining whether a chemical or physical change in the state of matter has taken place and identify chemical and physical characteristics of substances.  |

|                |  |  |   |
|----------------|--|--|---|
| SC.912.P.8.3:  | Explore the scientific theory of atoms (also known as atomic theory) by describing changes in the atomic model over time and why those changes were necessitated by experimental evidence.   | 346093 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lessons including figures and diagrams. Students learn how the atomic model progressed over time and became increasingly accurate due to the contributions of multiple physicists. Students will also learn the structure, composition, and behavior of atoms and study how those different components interact with each other. | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessments. Students will answer questions describing the historic development of modern atomic theory. They will also identify the scientists and models they created that contributed to its development. Student also address the charges and masses of subatomic particles. They will also identify the location and number of subatomic particles in different elements. |
| SC.912.P.8.4:  | Explore the scientific theory of atoms (also known as atomic theory) by describing the structure of atoms in terms of protons, neutrons and electrons, and differentiate among these particles in terms of their mass, electrical charges and locations within the atom. | 346095 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Structure<br><br>Text-based lessons including figures and diagrams. Students learn about protons, neutrons, and electrons in terms of their mass, location within the atom, and electrical charges. Students also learn the definition of an amu and the mass of each subatomic particle using these units.   | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessments. Students will answer questions describing subatomic particles, and identifying their mass, location in an atom, other subatomic particles such as quarks, and their individual charges.   |
| SC.912.P.8.5:  | Relate properties of atoms and their position in the periodic table to the arrangement of their electrons.   | 346099 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Organizing the Elements Part 2<br><br>Text-based lesson including interactive diagram of the periodic table. Students will investigate how the properties of atoms, including their atomic number and electronic arrangement, determine their position on the periodic table.  | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessments. Students will answer questions using the periodic table that relates properties of groups, rows, and individual elements to their location on the periodic table. Students will also determine the electronic arrangement of elements according to their position on the periodic table.  |
| SC.912.P.10.5: | Relate temperature to the average molecular kinetic energy.  | 346075 <b>Chemistry A Unit 3: Measurement and Chemical Calculation</b><br><br>The International System of Units<br><br>Text-based lesson. Students will understand the relationship between temperature and average kinetic energy.  | 118614 <b>Unit 3 Assignment:</b><br><br>Test: Measurement and Chemical Calculation<br><br>Summative, multiple choice assessment. Students will answer questions showing they understand the relationship between average kinetic energy and temperature involving different forms of heat and energy transformations.   |
| SC.912.P.8.6:  | Distinguish between bonding forces holding compounds together and other attractive forces, including hydrogen bonding and van der Waals forces.  | 345547 <b>Chemical B Unit 1: Chemical Bonding</b><br><br>Introduction to Chemical Bonding<br><br>Text-based lesson including diagrams and figures. Students will gain an understanding of the intramolecular and intermolecular bonding forces that hold molecules and compounds together.   | 118456 <b>Unit 1 Assignment:</b><br><br>Test: Chemical Bonding<br><br>Summative, multiple choice assessment. Students will answer questions determining whether bonds are intermolecular or intramolecular, the strength of the bond, and the type of bonds involved in holding together the atoms of different molecules.  |

|                |  |  |   |
|----------------|--|--|---|
| SC.912.P.10.6: | Create and interpret potential energy diagrams, for example: chemical reactions, orbits around a central body, motion of a pendulum. | 345726 <b>Chemical B Unit 3: Chemical Thermodynamics</b><br><br>Heat Capacity and Enthalpy<br><br>Text-based lesson with tables, equations, practice questions, and diagrams. Students will learn that chemical reactions can be graphically represented using potential energy diagrams to describe whether an exothermic or endothermic reaction has occurred, will create a diagram in the practice questions, and learn how to interpret what type of reaction occurred by looking at a potential energy diagram.  | 118496 <b>Unit 3 Assignment:</b><br><br>Assignment: Chemical Thermodynamics<br><br>Formative, multiple choice assessment. Students will use a table containing the standard enthalpy change of formations of different chemical compounds to interpret potential energy diagrams.   |
| SC.912.P.8.7:  | Interpret formula representations of molecules and compounds in terms of composition and structure.                                  | 346128 <b>Chemistry B Unit 5: Ions and Ionic Compounds</b><br>118635<br>346132 Writing Formulas for Binary Compounds<br>118649<br>346135 Naming Binary Ionic Compounds<br><br>346140 Ternary Ionic Compounds<br><br>346142 <b>Unit 6: Molecular compounds, Acids, and Bases</b><br><br>Naming Binary Molecular Compounds<br><br>Writing Formulas for Binary Molecular Compounds<br><br>Text-based lessons including figures, diagrams, and practice problems. Students learn how to determine and write ionic and molecular formulas for compounds and molecules. Students also learn to identify the bonds and atoms contained in each based on bond characteristics. | <b>Unit 5 Assignment:</b><br><br>Test: Ions and Ionic Compounds<br><br><b>Unit 6 Assignment:</b><br><br>Test: Molecular Compounds, Acids, and Bases<br><br>Summative, multiple choice assessments. Students answer questions interpreting the name or formula for a given molecular or ionic compound. Students also identify the bond structure based on characteristics learned in previous material. |
| SC.912.P.10.7: | Distinguish between endothermic and exothermic chemical processes.   | 345726 <b>Chemistry B Unit 3: Chemical Thermodynamics</b><br><br>Heat Capacity and Enthalpy<br><br>Text-based lesson. Students will learn how to determine whether a chemical reaction is exothermic or endothermic, both qualitatively and quantitatively.  | 118494 <b>Unit 3 Assignment:</b><br><br>Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students answer questions differentiating between exothermic and endothermic reactions using qualitative and quantitative analyses.   |

|                                 |  |  |  |
|---------------------------------|--|--|--|
| <a href="#">SC.912.P.8.8:</a>   | Characterize types of chemical reactions, for example: redox, acid-base, synthesis, and single and double replacement reactions. | 346174 <b>Chemistry A Unit 9: Chemical Equations</b>   | 118666 <b>Chemistry A Unit 9 Assignment:</b>   |
|                                 |  | 346181 Chemical Reactions  | 118504 Test: Chemical Equations  |
|                                 |  | 345780 Types of Reactions  | <b>Chemistry B Unit 4 Assignment:</b>  |
|                                 |  | 345794 <b>Chemistry B Unit 4: Chemical Kinetics and Electrochemistry</b><br><br>Redox Reactions<br><br>Acid-Base Theory<br><br>Text-based lessons including practice problems. Students will understand the different types of chemical reactions and how to identify what reactions have occurred based on balanced chemical equations. | Test: Chemical Kinetics and Electrochemistry<br><br>Summative, multiple choice assessments. Students answer questions that determine the type of reaction that has occurred after balancing chemical equations and using characteristics of each type of reaction learned from the material. |
| <a href="#">SC.912.P.8.9:</a>   | Apply the mole concept and the law of conservation of mass to calculate quantities of chemicals participating in reactions.      | 346153 <b>Chemistry A Unit 7: The Mole Concept</b>   | 118655 <b>Unit 7 Assignment:</b>   |
|                                 |  | The Mole<br><br>Text-based lesson including practice problems. Students will learn the definition of a mole and understand that the law of conservation of mass applies when calculating the moles of products and reactants formed during chemical reactions.   | Test: The Mole Concept<br><br>Summative, multiple choice assessment. Students will calculate moles, convert from grams to moles, and determine molar volumes of compounds involved in chemical reactions while applying the law of conservation of mass in their calculations.               |
| <a href="#">SC.912.P.10.9:</a>  | Describe the quantization of energy at the atomic level.   | 345626 <b>Chemical B Unit 1: Chemical Bonding</b>  | 118456 <b>Unit 1 Assignment:</b>   |
|                                 |  | Electron Configuration<br><br>Text-based lesson including figures, diagrams, and practice problems. Students will understand how electrons occupy and move from orbital to orbital based on their energy state, and understand how to apply Planck's constant.   | Test: Chemical Bonding<br><br>Summative, multiple choice assessment. Students will answer questions describing the energy of an electron in a given orbital and calculate the energy of a photon using derivations of Planck's equation.   |
| <a href="#">SC.912.P.12.10:</a> | Interpret the behavior of ideal gases in terms of kinetic molecular theory.  | 345174 <b>Chemical B Unit 3: Chemical Thermodynamics</b>   | 118494 <b>Unit 3 Assignment:</b>   |
|                                 |  | 345742 Laws of Thermodynamics<br><br>Gas Laws<br><br>Text-based lessons including practice problems. Students will understand how to explain gas laws according to the kinetic molecular theory. Students will also learn how to calculate the pressure, volume, and temperature of gases using the ideal gas law equation.              | Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students answer questions explaining gas laws according to the kinetic molecular theory and calculate the pressure, temperature, volume, and partial pressure of different gases.                                |

|                                 |   |  |   |
|---------------------------------|---|--|---|
| <a href="#">SC.912.P.12.11:</a> | Describe phase transitions in terms of kinetic molecular theory.  | 346060 <b>Chemistry A Unit 2: Matter and Energy</b>  | 118605 <b>Unit 2 Assignment:</b>  |
|                                 |   | States of Matter and Physical and Chemical Changes<br><br>Text-based lesson. Students will learn how the kinetic molecular theory describes the characteristics of the states of matter. They will learn to apply this theory to changes in the states of matter.  | Test: Matter and Energy<br><br>Summative, multiple choice assessment. Students will describe changes in the states of matter using the kinetic molecular theory and answer questions showing they understand the basic assumptions of the theory.   |
| <a href="#">SC.912.P.8.11:</a>  | Relate acidity and basicity to hydronium and hydroxyl ion concentration and pH.   | 345801 <b>Chemistry B Unit 5: pH and Buffering</b>   | <b>Unit 5 Assignments:</b>  |
|                                 |   | 345816 pH and pOH<br><br>Lab: pH<br><br>Text-based lesson including practice problems, and a hands-on lab lesson. Students will learn the properties and characteristics of acids and bases. They will also determine whether a substance is an acid, base, and/or salt by whether hydronium or hydroxyl ions are present, and by pH levels and learn how to calculate these values. | Lab Report: pH<br><br>Test: pH and Buffering<br><br>Summative, multiple choice assessment and hands-on lab report. Students will answer questions identifying the acidity or basicity of a substance based on hydronium and hydroxyl concentrations, whether these were produced, and by analyzing pH levels of a substance. Students will also calculate the concentrations of hydroxyl and hydronium. Students also complete a hands-on lab using a pH indicator to determine if common substances are acidic or basic based on a color change. |
| <a href="#">SC.912.P.10.12:</a> | Differentiate between chemical and nuclear reactions.   | 345845 <b>Chemistry B Unit 7: Nuclear and Environmental Chemistry</b>  | 118533 <b>Unit 7 Assignment:</b>  |
|                                 |   | Nuclear Fusion and Fission<br><br>Text-based lesson. Students will learn the difference in energy and processes involved in chemical and nuclear reactions.  | Test: Nuclear and Environmental Chemistry<br><br>Summative, multiple choice assessment. Students answer questions differentiating between the atoms, energy, processes, and characteristics of chemical and nuclear reactions.  |
| <a href="#">SC.912.P.12.12:</a> | Explain how various factors, such as concentration, temperature, and presence of a catalyst affect the rate of a chemical reaction. | 345754 <b>Chemistry B Unit 4: Chemical Kinetics and Electrochemistry</b>   | 118504 <b>Unit 4 Assignment:</b>  |
|                                 |   | Introduction to Kinetics and Electrochemistry<br><br>Text-based lesson including practice problems. Students will read text and observe images that describe fats, lipids, nucleic acids, and proteins, and their structures, functions, and where they are found in a cell.   | 118541 <b>Unit 8 Assignment:</b><br><br>Test: Biochemistry and Chemical Instrumentation<br><br>Summative, multiple choice assessment. Students will answer questions identifying the four different macromolecules based on their descriptions from the material.   |
| SC.912.L.18.2.                      | Describe the important structural characteristics of monosaccharides, disaccharides, and polysaccharides and explain the functions of carbohydrates in living things.   | 345875             | <b>Chemistry B Unit 8: Biochemistry and Analytical Techniques</b><br><br>Biochemistry: Proteins, Fats, and Sugars<br><br>Text-based lesson. Students will understand how to differentiate between sugars and carbohydrates based on their molecular structure. Students will also learn the importance of carbohydrates and how organisms use them as an energy source.   | 118541 <b>Unit 8 Assignment:</b><br><br>Test: Biochemistry and Chemical Instrumentation<br><br>Summative, multiple choice assessment. Students will answer questions identifying carbohydrates based on their structural composition, and which types are used by different living things for energy.   |
| SC.912.L.18.3.                      | Describe the structures of fatty acids, triglycerides, phospholipids, and steroids. Explain the functions of lipids in living organisms. Identify some reactions that fatty acids undergo. Relate the structure and function of cell membranes. | 345875             | <b>Chemistry B Unit 8: Biochemistry and Analytical Techniques</b><br><br>Biochemistry: Proteins, Fats, and Sugars<br><br>Text-based lesson. Students will learn the structures of the different lipid types and be able to identify them. Students will also understand the functions of lipids in organisms, and be able to relate their structures to their functions.  | 118541 <b>Unit 8 Assignment:</b><br><br>Test: Biochemistry and Chemical Instrumentation<br><br>Summative, multiple choice assessment. Students will answer questions identifying the different lipids by structure, function, and characteristics. They will also answer questions describing how the function and structure of lipids relate to one another.   |
| SC.912.L.18.4.                      | Describe the structures of proteins and amino acids. Explain the functions of proteins in living organisms. Identify some reactions that amino acids undergo. Relate the structure and function of enzymes.                                     | 345869<br>345875   | <b>Chemistry B Unit 8: Biochemistry and Analytical Techniques</b><br><br>Biochemistry: The Chemistry of Life<br><br>Biochemistry: Proteins, Fats, and Sugars<br><br>Students will learn about enzymes, their characteristics, and function in the human body. They will understand that enzymes are proteins, and how amino acid sequence is responsible for the function of the protein.   | 118541 <b>Unit 8 Assignment:</b><br><br>Test: Biochemistry and Chemical Instrumentation<br><br>Summative, multiple choice assessment. Students will answer questions determining what structure is shown of a protein and how enzymes influence rates of reactions in organisms. They will also describe what how changes in amino acids and other factors can affect protein function.   |
| SC.912.L.18.11.                     | Explain the role of enzymes as catalysts that lower the activation energy of biochemical reactions. Identify factors, such as pH and temperature, and their effect on enzyme activity.  | 346174<br>345875   | <b>Chemistry A Unit 9: Chemical Equations</b><br><br>Chemical Reactions<br><br><b>Chemistry B Unit 8: Biochemistry and Analytical Techniques</b><br><br>Biochemistry: Proteins, Fats, and Sugars<br><br>Text-based lessons. Students will learn how enzymes affect the rate of reaction of biological functions and relate this to activation energy. Students will also be able to identify the factors that affect enzyme function. | 118541 <b>Chemistry A Unit 9 Assignment:</b><br><br>Test: Chemical Equations<br><br><b>Chemistry B Unit 8 Assignment:</b><br><br>Test: Biochemistry and Chemical Instrumentation<br><br>Summative, multiple choice assessments. Students will answer questions that explain how enzymes lower the activation energy of reaction, allowing them to occur quicker. They will also identify the factors that affect enzyme function. |
| SC.912.L.18.12.                     | Discuss the special properties of water that contribute to Earth's suitability as an environment for life: cohesive behavior, ability to moderate temperature, expansion upon freezing, and versatility as a solvent.                           | 346163             | <b>Chemistry A Unit 8: Chemical Masses</b><br><br>Percent Composition and Solution Concentration<br><br>Text-based lesson. Students will examine the different physical properties of water and how they contribute to the survival of organisms on Earth.  | 118660 <b>Unit 8 Assignment:</b><br><br>Test: Chemical Masses<br><br>Summative, multiple choice assessment. Students will answer questions determining the property of water that sustains life on Earth.   |
| SC.912.L.17.17.                     | Assess the effectiveness of innovative methods of protecting the environment.   | 346144<br>346164   | <b>Chemistry A Unit 6: Molecular Compounds, Acids, and Bases</b><br><br>Recognizing Common Acids and Bases<br><br><b>Unit 8 Chemical Masses:</b><br><br>Lab: Dilutions<br><br>Text-based and hands-on laboratory lesson. Students will analyze the methods by which humans are attempting to protect the environment through conservation efforts and government agencies like the EPA.   | 120708 <b>Unit 8 Assignment:</b><br><br>Discussion: Environmental Issues and PPM<br><br>Peer-to-peer, interactive discussion. Students will research a contaminant and explain what environmental issues it causes using the EPA website.   |
| SC.912.L.17.19.                     | Describe how different natural resources are produced and how their rates of use and renewal limit availability.  | 345900             | <b>Chemistry B Unit 9: Industrial Processes, Energy and Careers:</b><br><br>Energy and Fossil Fuels<br><br>Text-based lesson. Students will learn about renewable and nonrenewable resources, the most commonly used energy resource, and alternative forms of energy.  | 118555 <b>Unit 9 Assignment:</b><br><br>Test: Industrial Processes, Energy and Careers<br><br>Summative, multiple choice assessment. Students will answer questions describe renewable and nonrenewable resources, which are used the most by humans for energy, and what alternative energy forms are available.   |

|  |   |   |   |
|--|---|---|---|
| <p>SC.912.L.17.20:</p>   | <p>Predict the impact of individuals on environmental systems and examine how human lifestyles affect sustainability.</p>   | <p>345860 <b>Chemistry B Unit 7: Nuclear and Environmental Chemistry</b></p> <p>345900 Water Quality and Wastewater Treatment</p> <p><b>Unit 9: Industrial Processes, Energy and Careers:</b></p> <p>Energy and Fossil Fuels</p> <p>Text-based lessons. Students will learn how human activities impact the environment. Students will also understand what humans can do to prevent harm to the environment individually and how to practice a sustainable lifestyle.</p>  | <p>118553 <b>Unit 7 Assignment:</b></p> <p>118555 Test: Nuclear and Environmental Chemistry</p> <p><b>Unit 9 Assignment:</b></p> <p>Test: Industrial Processes, Energy and Careers</p> <p>Summative, multiple choice assessment. Students will answer questions explaining how certain human activities can harm the environment and what methods humans are practicing to conserve it. Students also answer questions explaining the advantages and disadvantages of certain methods used to decontaminate resources.</p>  |
| <p>SC.912.N.1.1:</p>   | <p>Define a problem based on a specific body of knowledge, for example: biology, chemistry, physics, and earth/space science, and do the following:</p> <ol style="list-style-type: none"> <li>pose questions about the natural world, Remarks/Examples: articulate the purpose of the investigation and identify the relevant scientific concepts.</li> <li>conduct systematic observations, Remarks/Examples: Write procedures that are clear and replicable. Identify observables and examine relationships between test (independent) variable and outcome (dependent) variable. Employ appropriate methods for accurate and consistent observations; conduct and record measurements at appropriate levels of precision. Follow safety guidelines.</li> <li>examine books and other sources of information to see what is already known,</li> <li>review what is known in light of empirical evidence, Remarks/Examples: Examine whether available empirical evidence can be interpreted in terms of existing knowledge and models, and if not, modify or develop new models.</li> <li>plan investigations, Remarks/Examples: Design and evaluate a scientific investigation.</li> </ol>   | <p><b>Chemistry A Unit 1: The Study of Chemistry</b></p> <p>Lab: The Scientific Method</p> <p>Hands-on lab lesson. Students learn how to form a question or purpose for an experiment.</p> <p>346051 <b>Chemistry A Unit 1: The Study of Chemistry</b></p> <p>Lab: The Scientific Method</p> <p>Hands-on lab lesson. Students will conduct an experiment on factors affecting the boiling point of water.</p> <p>346051 <b>Chemistry A Unit 1: The Study of Chemistry</b></p> <p>Ways of Knowing</p> <p>Text-based lesson. Students will observe a table which describes how scientists use resources to see what prior research and knowledge has been gained on what they are testing.</p> <p>351847</p> <p><b>Chemistry A Unit 1: The Study of Chemistry</b></p> <p>Lab: The Scientific Method</p> <p>Hands-on lab lesson. |               |   |                  |  |  |
|---------------|---|------------------|--|--|
| SC.912.N.2.1: | Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science).   | 346051<br>346093 | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Lab: The Scientific Method<br><br><b>Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lessons. Students will learn about pseudosciences of the past, such as alchemy, and what this was not science. They also understand what is science and how the scientific method is used for scientific evaluations to be valid.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Student will answer questions identifying alchemy as a pseudoscience and will address when an investigation is not scientifically valid.  |
| SC.912.N.3.1: | Explain that a scientific theory is the culmination of many scientific investigations drawing together all the current evidence concerning a substantial range of phenomena; thus, a scientific theory represents the most powerful explanation scientists have to offer. | 346050           | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand how scientific theories are developed by scientists through experimentation and investigations.   | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions explaining how scientific theories are formed and determine whether hypotheses in different scenarios can be classified as a theory.   |
| SC.912.N.4.1: | Explain how scientific knowledge and reasoning provide an empirically-based perspective to inform society's decision making.  | 345046           | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Effects of Science on Everyday Life<br><br>Text-based lesson, slideshow, and interactive quiz. Students will understand how society and government policies are made based on knowledge gained after the occurrence of a natural disaster. They will observe how policies changed by clicking through a presentation and will take a practice quiz assessing their knowledge of how policies were formed after the event.   | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions explaining how science helps society make decisions and governments set policies, and procedures in different scenarios.   |
| SC.912.N.1.2: | Describe and explain what characterizes science and its methods.  | 346050<br>346051 | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Lab: The Scientific Method<br><br>Text-based and hands-on lab lesson. Students will learn the definition of science and investigate the methods scientists use to explain naturally occurring phenomena.  | 118603 <b>Unit 1 Assignment:</b><br><br>Lab Report: The Scientific Method<br><br>Hands-on lab report. Students will use the scientific method to acquire scientific method showing the boiling point of water and explain any deviations.  |
| SC.912.N.2.2: | Identify which questions can be answered through science and which questions are outside the boundaries of scientific investigation, such as questions addressed by other ways of knowing, such as art, philosophy, and religion.   | 351847           | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Ways of Knowing<br><br>Text-based lesson. Students will learn the importance of peer review, and understand how to determine the difference between science and pseudoscience.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions, determining if science or pseudoscience was used, whether scientists' claims are valid in different scenarios, and show that they understand the importance of peer review.   |
| SC.912.N.3.2: | Describe the role consensus plays in the historical development of a theory in any one of the disciplines of science.   | 346093           | <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lesson. Students will analyze the development of atomic theory and how ideas built upon one another from the times of the ancient Greeks to present.  | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessment. Students will answer questions describing how atomic theory developed from the times of Ancient Greece to present.  |
| SC.912.N.4.2: | Weigh the merits of alternative strategies for solving a specific societal problem by comparing a number of different costs and benefits, such as human, economic, and environmental.   | 345860<br>345900 | <b>Chemistry B Unit 7: Nuclear and Environmental Chemistry</b><br><br>Water Quality and Wastewater Treatment<br><br><b>Unit 9: Industrial Processes, Energy and Careers</b><br><br>Energy and Fossil Fuels<br><br>Text-based lessons. Students will gain an understanding of how scientists must consider social, economic, and technological limitations when practicing science and creating products. They will see how scientists do this specifically when practicing environmental conservation and developing new energy sources. | 118533 <b>Unit 7 Assignment:</b><br>118555 Test: Nuclear and Environmental Chemistry<br><br><b>Unit 9 Assignment:</b><br>Test: Industrial Processes, Energy and Careers<br><br>Summative, multiple choice assessment. Students will answer questions by analyzing examples and determining whether the costs outweigh the benefits regarding the use of different energy sources. Students will determine if the use of an energy source is cost-efficient or economically unfeasible. |
| SC.912.N.1.3: | Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented.         | 346050           | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that creativity plays a pivotal role in the furthering of scientific knowledge.   | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions explaining why scientists must be creative in forming new scientific ideas.  |
| SC.912.N.2.3: | Identify examples of pseudoscience (such as astrology, phrenology) in society.  | 346050           | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Ways of Knowing<br><br>Text-based lesson. Students will learn the importance of peer review, and understand how to determine the difference between science and pseudoscience.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions, determining if science or pseudoscience was used, whether scientists' claims are valid in different scenarios, and show that they understand the importance of peer review.   |
| SC.912.N.3.3: | Explain that scientific laws are descriptions of specific relationships under given conditions in nature, but do not offer explanations for those relationships.  | 346050<br>346051 | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Lab: The Scientific Method<br><br>Text-based lesson. Students will understand how scientific laws are developed by scientists through experimentation and investigations, and are recognized to be true throughout the universe, though do not explain natural phenomena.   | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions explaining the limitations of what scientific laws can explain regarding natural phenomena, and that they are universally recognized.  |

|  |   |   |   |
|--|---|---|---|
| <a href="#">SC.912.N.1.4:</a>  | Identify sources of information and assess their reliability according to the strict standards of scientific investigation.   | 351847 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Ways of Knowing<br><br>Text-based lesson. Students will learn the importance of peer review, and understand how to determine the difference between science and pseudoscience.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions, determining if science or pseudoscience was used, whether scientists' claims are valid in different scenarios, and show that they understand the importance of peer review.  |
| <a href="#">SC.912.N.2.4:</a>  | Explain that scientific knowledge is both durable and robust and open to change. Scientific knowledge can change because it is often examined and re-examined by new investigations and scientific argumentation. Because of these frequent examinations, scientific knowledge becomes stronger, leading to its durability.   | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that scientific knowledge can change as new ideas, technology, and developments are created by scientists, building upon previous knowledge. This also enables scientists to strengthen or further support existing theories and laws.  | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions containing examples and scenarios where scientific knowledge changed or could change with the development of new technology, idea, and advancements in the different fields of science.   |
| <a href="#">SC.912.N.3.4:</a>  | Recognize that theories do not become laws, nor do laws become theories; theories are well supported explanations and laws are well supported descriptions.   | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that scientific laws cannot change into scientific theories and vice versa.   | 118603 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions showing that they understand scientific laws cannot become theories and vice versa.   |
| <a href="#">SC.912.N.1.5:</a>  | Describe and provide examples of how similar investigations conducted in many parts of the world result in the same outcome.  | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>346051 The Methods of Science<br><br>Lab: The Scientific Method<br><br>Text-based lesson. Students will read that scientific experiments, when repeated by other scientists anywhere else in the world, should yield the same results in order for the results to be valid.   | 118396 <b>Unit 1 Assignment:</b><br><br>Test: The Study of Chemistry<br><br>Summative, multiple choice assessment. Students will answer questions showing that they understand that, for scientific results to be recognized as valid, the results should be repeatable by scientists anywhere in the world.  |
| <a href="#">MACC.912.S-1C.2.6:</a><br><a href="#">LACC.1112.RST.1.1:</a> | Evaluate reports based on data.<br>Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.   | 346101 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Paper: Carbon-14 Dating Instructions<br><br>Text-based lesson. Students will analyze a scientific text over cite evidence from several texts to create a short response and a research paper.   | 118628 <b>Unit 4 Assignment:</b><br><br>Paper: Carbon-14 Dating<br><br>Students will analyze scientific texts over radioactive dating in a research paper. They will also be expected to cite the resources they used to find this information.   |
| <a href="#">SC.912.N.2.5:</a>  | Describe instances in which scientists' varied backgrounds, talents, interests, and goals influence the inferences and thus the explanations that they make about observations of natural phenomena and describe that competing interpretations (explanations) of scientists are a strength of science as they are a source of new, testable ideas that have the potential to add new evidence to support one or another of the explanations. | 346053 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Branches of Chemistry<br><br>Text-based lesson. Students will investigate the different fields of science and what scientists study in them. Students will also understand that, in order to completely understand a natural phenomena, it takes several scientists from different fields working together and gathering evidence to explain why an event occurs.   | 118604 <b>Unit 1 Assignment:</b><br><br>118396 Paper: Branches of Chemistry<br><br>Test: The Study of Chemistry<br><br>Research paper and summative, multiple choice assessment. In the paper, students will research a career involved in chemistry and explain what backgrounds a person needs to practice in that career. In the assessment, students will answer questions describing instances in which scientists from several fields of science would have to come together to fully explain a natural phenomena or event. |
| <a href="#">SC.912.N.3.5:</a>  | Describe the function of models in science, and identify the wide range of models used in science.  | 346093 <b>Chemistry A Unit 4: Atomic Models and the Periodic Table</b><br><br>Atomic Models<br><br>Text-based lesson including figures and multimedia. Students will identify the different models used during scientific investigations, and how they represent atoms, and in what situations these models should be used. Students will also see how models organize data.  | 118623 <b>Unit 4 Assignment:</b><br><br>Unit 4 Test: Models of the Atom, Atomic Structure and the Periodic Table<br><br>Summative, multiple choice assessment. Students will identify different types of models representing atoms and molecules, and answer questions explaining when using these models are appropriate. Students will also explain how models can help develop theories as in the case of the atomic theory.   |
| <a href="#">SC.912.N.1.6:</a>  | Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied.  | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will learn the definition of an observation and inference, and will analyze examples of each. They will also learn how to distinguish between the two.  | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions where they provide inferences for a given observation.  |
| <a href="#">SC.912.N.1.7:</a>  | Recognize the role of creativity in constructing scientific questions, methods and explanations.  | 346050 <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>The Methods of Science<br><br>Text-based lesson. Students will understand that creativity plays a pivotal role in the furthering of scientific knowledge.   | 118602 <b>Unit 1 Assignment:</b><br><br>Assignment: The Study of Chemistry 2<br><br>Formative, multiple choice, and short answer assessment. Students will answer questions explaining why scientists must be creative in forming new scientific ideas.   |
| <a href="#">SC.912.P.10.6:</a>   | Create and interpret potential energy diagrams, for example: chemical reactions, orbits around a central body, motion of a pendulum.  | 345726 <b>Chemical B Unit 3: Chemical Thermodynamics</b><br><br>Heat Capacity and Enthalpy<br><br>Text-based lesson with tables, equations, practice questions, and diagrams. Students will learn that chemical reactions can be graphically represented using potential energy diagrams to describe whether an exothermic or endothermic reaction has occurred, will create a diagram in the practice questions, and learn how to interpret what type of reaction occurred by looking at a potential energy diagram. | 118496 <b>Unit 3 Assignment:</b><br><br>Assignment: Chemical Thermodynamics<br><br>Formative, multiple choice assessment. Students will use a table containing the standard enthalpy change of formations of different chemical compounds to interpret potential energy diagrams.   |

|                    |  |  |  |  |  |
|--------------------|--|--|--|--|--|
| SC.912.P.10.8:     | Explain entropy's role in determining the efficiency of processes that convert energy to work.   | 345734   | <b>Chemistry B Unit 3: Chemical Thermodynamics</b><br><br>Entropy and Gibbs Free Energy<br><br>Text-based lesson. Students will learn the definition of entropy and relate it to the energy of a system. Students will also use it to determine efficient when different forms of energy produce work, mathematically.   | 118494   | <b>Unit 3 Assignment:</b><br><br>Test: Chemical Thermodynamics<br><br>Summative, multiple choice assessment. Students will answer questions explaining the factors that increase and decrease the entropy of a system, and use entropy to determine a system's efficiency.   |
| SC.912.P.8.10:     | Describe oxidation-reduction reactions in living and non-living systems.   | 345780<br>345860   | <b>Chemistry B Unit 4: Chemical Kinetics and Electrochemistry</b><br><br>Redox Reactions<br><br><b>Unit 7: Nuclear and Environmental Chemistry</b><br><br>Water Quality and Wastewater Treatment<br><br>Text-based lessons including tables and practice problems. Students will learn about redox reactions and how they work in batteries and metabolic functions.   | 118517   | <b>Unit 4 Assignment:</b><br><br>Lab Report: Chemical Polishing of a Silver Surface<br><br>Hands-on lab activity. Students will conduct an experiment by removing tarnish from a silver object. They will explain how a reversible redox reaction is occurring in this process and give examples of how this process is used in other nonliving objects.   |
| SC.912.P.8.12:     | Describe the properties of the carbon atom that make the diversity of carbon compounds possible.   | 345053<br>345819   | <b>Chemistry A Unit 1: The Study of Chemistry</b><br><br>Branches of Chemistry<br><br><b>Chemistry B Unit 6: Organic Chemistry</b><br><br>Introduction and Classification of Organic Compounds<br><br>Text-based lessons. Students will read about the different characteristics of carbon that enable it to bond to itself and form strong bond with other elements.  | 118530<br>118526   | <b>Chemistry B Unit 6 Assignment:</b><br><br>Activity: Kevlar® Research<br><br>Test: Organic Chemistry<br><br>Short, research activity and summative, multiple choice assessment. Students will perform research on how carbon atoms contribute to the strength of Kevlar® and how it was developed. In the test, students will answer questions describing the characteristics and properties of carbon that cause it to bond to itself, other molecules, and form chained molecules.   |
| SC.912.P.8.13:     | Identify selected functional groups and relate how they contribute to properties of carbon compounds.  | 345819   | <b>Chemistry B Unit 6: Organic Chemistry</b><br><br>Introduction and Classification of Organic Compounds<br><br>Text-based lesson including figures and diagrams. Students will observe different functional groups of organic molecules, their properties, and learn how to name these molecules.   | 118530<br>118526   | <b>Chemistry B Unit 6 Assignment:</b><br><br>Activity: Kevlar® Research<br><br>Test: Organic Chemistry<br><br>Short, research activity and summative, multiple choice assessment. Students will perform research on Kevlar® and explain how the strength of the molecules in this material are related to the bonding properties of carbon. In the test, students will answer questions identifying the functional groups and their properties in various molecules.   |
| MACC.912.F-IF.3.7: | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.<br><br>a. Graph linear and quadratic functions and show intercepts, maxima, and minima.<br>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.  |  |  |  |  |
|                    | c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.<br>d. Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.<br>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude. |  |  |  |  |
| MACC.912.N-O.1.1:  | Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.  |  |  |  |  |
| MACC.912.N-O.1.3:  | Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.  |  |  |  |  |

Students will learn the different factors that affect and determine the population size of different species in an ecosystem. Students will also learn the definitions of the terms listed in the benchmark and understand how they relate to one another.</p>   |
| <p>329356</p> | <p><b>Environmental Science A Unit 2: Living in the Biosphere</b></p> <p>329380</p> <p>Relationships Within a Community</p> <p>329395</p> <p>Human Populations</p> <p>329647</p> <p>Evolution</p> <p>329506</p> <p><b>Unit 5: Food, Agriculture, and Waste</b></p> <p>Food and Nutrition</p> <p>Solid Waste and Waste Management</p> <p>Text-based lessons. Students will analyze how genetic and environmental factors can affect human health. Students will understand that people can inherit or be predisposed to certain detrimental health factors and can endure health problems caused by pollution and/or environmental contaminants.</p> |
| <p>329356</p> | <p><b>Environmental Science A Unit 2: Living in the Biosphere</b></p> <p>Relationships Within a Community</p> <p>Text-based lesson. Students will understand and learn the characteristics, and relationships, between organisms that are predators and parasites. They will also be able to identify these relationships by examining different examples presented in the lesson.</p>  |

|               |  |
|---------------|--|
| <p>106584</p> | <p><b>Unit 3 Assignment:</b></p> <p>Test: Populations and How They Change</p> <p>Summative, multiple choice assessment. Students will answer questions analyzing what will happen to the population size of a species when factors change, determine the factors that limit population size, and use graphs to determine the carrying capacity of a population.</p>  |
| <p>106571</p> | <p><b>Unit 2 Assignment:</b></p> <p>106628 Test: Living in the Biosphere</p> <p><b>Unit 5 Assignment:</b></p> <p>Test: Food, Agriculture, and Waste</p> <p>Summative, multiple choice assessment. Students will answer questions explaining harmful and beneficial relationships with external factors that humans have with other organisms and pathogens, and how these factors can affect human health. Students also answer questions explaining how a country's health can be affected by factors such as waste management and water cleanliness. Student will explain how lifestyle choice and genetic factors, such as predisposition to obesity, also can affect human health.</p> |
| <p>106571</p> | <p><b>Unit 2 Assignment:</b></p> <p>Test: Living in the Biosphere</p> <p>Summative, multiple choice assessment. Students will answer questions identifying relationships between different organisms, and determining whether the relationship is beneficial, harmful, or has no effect on either of the organisms involved.</p>   |

|   |  |
|---|--|
| <p><a href="#">SC.912.L.1.7.7:</a></p>  | <p>Characterize the biotic and abiotic components that define freshwater systems, marine systems and terrestrial systems.</p>  |
| <p><a href="#">SC.912.L.1.7.8:</a></p>  | <p>Recognize the consequences of the losses of biodiversity due to catastrophic events, climate changes, human activity, and the introduction of invasive, non-native species.</p>   |
| <p><a href="#">SC.912.L.1.7.9:</a></p>  | <p>Use a food web to identify and distinguish producers, consumers, and decomposers. Explain the pathway of energy transfer through trophic levels and the reduction of available energy at successive trophic levels.</p> |
| <p><a href="#">SC.912.L.1.6.10:</a></p> | <p>Evaluate the impact of biotechnology on the individual, society and the environment, including medical and ethical issues.</p>  |

|               |   |
|---------------|---|
| <p>329538</p> | <p><b>Environmental Science A Unit 6: Terrestrial Biomes</b></p> <p>324548 Tundra and Deserts</p> <p>329561 Grasslands</p> <p>329354 Forests</p> <p>329360 <b>Environmental Science B Unit 1: The Hydrosphere</b></p> <p>Freshwater Ecosystems</p> <p>Marine Ecosystems</p> <p>Text-based lessons. Students will analyze biomes in both marine, freshwater, and terrestrial systems. They will examine the characteristics of both, including the abiotic and biotic parts of each biome.</p> |
| <p>329359</p> | <p><b>Environmental Science A Unit 2: Living in the Biosphere</b></p> <p>329395</p> <p>Biodiversity</p> <p><b>Unit 3: Populations and How They Change</b></p> <p>Evolution</p> <p>Text-based lessons. Students will analyze what occurs to the biodiversity of an ecosystem when human and natural events occur.</p>  |
| <p>329350</p> | <p><b>Environmental Science A Unit 2: Living in the Biosphere</b></p> <p>Food Webs and Ecological Pyramids</p> <p>Text-based lesson including diagrams, flowcharts, and visual aids. Students will be introduced to food webs and energy diagrams describing the energy available for use for producers, consumers, and decomposers. Students will also learn the characteristics that are used to identify each type of organism.</p>  |
| <p>329467</p> | <p><b>Environmental Science Unit 5: Food, Agriculture, and Waste</b></p> <p>Food and Nutrition</p> <p>Text-based lesson. Students will learn about how genetic engineering has been used to modify foods consumed by society, and the ethical concerns associated with this practice for both society and individual organisms.</p>   |

|               |  |
|---------------|--|
| <p>106656</p> | <p><b>Environmental Science A Unit 6 Assignment:</b></p> <p>106576 Test: Terrestrial Biomes</p> <p><b>Environmental Science B Unit 1 Assignment:</b></p> <p>Test: The Hydrosphere</p> <p>Summative, multiple choice assessment. Students will answer questions describing and identifying the different biotic and biotic factors found in different systems of individual biomes in an ecosystem.</p>   |
| <p>106571</p> | <p><b>Unit 2 Assignment:</b></p> <p>106584 Test: Living in the Biosphere</p> <p><b>Unit 3 Assignment:</b></p> <p>Test: Populations and How They Change</p> <p>Summative, multiple choice assessments. Students will answer questions describing what occurs when human and natural events occur when given a scenario explaining a change in an ecosystem.</p>   |
| <p>106571</p> | <p><b>Unit 2 Assignment:</b></p> <p>Test: Living in the Biosphere</p> <p>Summative, multiple choice assessment. Students will determine what will happen to different types of organisms if there are disruptions in a food chain using diagrams and scenarios. Students will also identify what type of organism is in an ecosystem based on a presented set of characteristics. They will describe the energy available at various trophic levels.</p>             |
| <p>106631</p> | <p><b>Unit 5 Assignment:</b></p> <p>Assignment: Food and Nutrition</p> <p>Formative, multiple choice and long answer assessment. Students will perform research to complete a long answer question addressing the benefits and ethical issues associated with genetic engineering. They must use resources of information to answer the question and list their sources as part of the answer to support their stance on the genetic modifications of organisms.</p> |

|                                  |  |
|----------------------------------|--|
| <a href="#">SC.912.L.1.7.10:</a> | Diagram and explain the biogeochemical cycles of an ecosystem, including water, carbon, and nitrogen cycle.  |
| <a href="#">SC.912.L.1.7.11:</a> | Evaluate the costs and benefits of renewable and nonrenewable resources, such as water, energy, fossil fuels, wildlife, and forests.   |
| <a href="#">SC.912.L.1.7.12:</a> | Discuss the political, social, and environmental consequences of sustainable use of land.  |
| <a href="#">SC.912.L.1.5.13:</a> | Describe the conditions required for natural selection, including: overproduction of offspring, inherited variation, and the struggle to survive, which result in differential reproductive success. |
| <a href="#">SC.912.L.1.7.13:</a> | Discuss the need for adequate monitoring of environmental parameters when making policy decisions.   |

329420 **Environmental Science A Unit 4: Soil and Land Resources**  
 329310 Biogeochemical Cycles: Carbon and Nitrogen  
 329346 **Environmental Science Unit 1: The Hydrosphere**  
 Water Resources and the Water Cycle  
 Virtual Lab: Water Cycle Gizmo  
 Text-based lessons including diagrams and flowcharts. Students will use these diagrams to understand how materials such as water, carbon, and nitrogen cycle throughout the Earth and individual ecosystems.

329452 **Environmental Science B Unit 4: The Geosphere and Mineral Resources**  
 329470 Nonrenewable Energy Resources  
 Renewable Energy Resources  
 Text-based lessons. Students will learn about the different types of renewable and nonrenewable resources used to produce energy. Students will also analyze the costs and benefits involved in using each type of energy.

329560 **Environmental Science B Unit 6: Sustainability**  
 329570 Sustainable Growth and Development  
 Your Sustainable Lifestyle  
 Text-based lessons. Students will analyze what they personally can do to practice sustainable living. They also read about how to become politically involved or socially involved, such as through volunteering, in order to educate themselves and others on sustainable living.

329395 **Environmental Science A Unit 3: Populations and How They Change**  
 Evolution  
 Text-based lesson. Student will learn the definition of natural selection and examine the different factors necessary for the process to occur.

329380 **Environmental Science A Unit 3: Populations and How They Change**  
 Human Populations  
 Text-based lesson. Students will gain an understanding of why politicians and policy makers must have some knowledge of environmental issues when forming laws and other policies.

106608 **Environmental Science A Unit 4 Assignment:**  
 106576 Test: Soil and Land Resources  
**Environmental Science B Unit 1 Assignment:**  
 Test: The Hydrosphere  
 Summative, multiple choice assessments. Students will answer questions using diagrams of the water, nitrogen, and carbon cycles, and explain how materials move in these cycles, within an ecosystem.

106618 **Unit 4 Assignment:**  
 Test: Energy Resources  
 Summative, multiple choice assessment. Students will answer questions evaluating scenarios in which different types of resources are used to create energy. Students will explain whether the cost of using different forms of energy outweighs the benefits, or vice versa. Students will also identify whether the energy source is renewable or nonrenewable.

106678 **Unit 6 Assignment:**  
 Paper: How Can I Make a Difference?  
 Research paper. Students will perform research on an environmental issue using various resources. Students will form a plan to address the issue and how they or their community would be affected if the issue were resolved. They close the 3-5 paragraph paper with a discussion of what they have learned during their research.

106584 **Unit 3 Assignment:**  
 Test: Populations and How They Change  
 Summative, multiple choice assessment. Students will answer questions identifying factors that are or are not required for natural selection to occur.

106584 **Unit 3 Assignment:**  
 Test: Populations and How They Change  
 Summative, multiple choice assessment. Students will answer questions explaining when the government and policy makers should acquire knowledge of the impacts certain actions could have on the environment by monitoring industries and populations.

|                                  |  |
|----------------------------------|--|
| <a href="#">SC.912.L.1.7.14:</a> | Assess the need for adequate waste management strategies.  |
| <a href="#">SC.912.L.1.7.15:</a> | Discuss the effects of technology on environmental quality.  |
| <a href="#">SC.912.L.1.7.16:</a> | Discuss the large-scale environmental impacts resulting from human activity, including waste spills, oil spills, runoff, greenhouse gases, ozone depletion, and surface and groundwater pollution. |
| <a href="#">SC.912.L.1.7.18:</a> | Describe how human population size and resource use relate to environmental quality.   |

329506 **Environmental Science A Unit 5: Food, Agriculture, and Waste**  
 Solid Waste and Waste Management  
 Text-based lesson. Students will investigate the different forms of waste humans and organisms produce. Students will also gain an understand of why waste management is important and the public health problems that can occur when this is not done properly.

349486 **Environmental Science A Food, Agriculture, and Waste:**  
 329452 Agriculture, Yesterday and Today  
**Environmental Science B Unit 4: Energy Resources**  
 Nonrenewable Resources  
 Text-based lessons. Students will understand the environmental issues that can arise when technology improves humans' abilities to alter an ecosystem.

329370 **Environmental Science B Unit 2: Water Use, Pollution, and Conservation**  
 329452 Aquatic Ecosystem Degradation and Water Pollution  
 329470 **Unit 4: Energy Resources**  
 Nonrenewable Energy Resources  
 Renewable Energy Resources  
 Text-based lessons. Students will investigate the harmful effects of human activities on the environment.

329544 **Environmental Science B Unit 6: Sustainability**  
 329556 Ecological Footprint  
 Ecological Footprint Activity  
 Text-based lessons. Students will gain an understanding of population size and resource use and how it relates to the degradation of the environment, climate changes, and decrease of biodiversity.

106628 **Unit 5 Assignment:**  
 Test: Food, Agriculture, and Waste  
 Summative, multiple choice assessment. Students will answer questions explaining the importance of proper waste management to human health and the different methods by which individuals can help improve waste management.

106628 **Environmental Science A Unit 5 Assignment:**  
 106618 Test: Food, Agriculture, and Waste  
**Environmental Science B Unit 4 Assignment:**  
 Test: Energy Resources  
 Summative, multiple choice assessment. Students will answer questions explaining the environmental problems that humans have created by using certain forms of fuels since the Industrial revolution and how improvements in technology are being used to prevent further destruction to the environment.

106585 **Environmental Science B Unit 2 Assignment:**  
 106618 Test: Water Use, Pollution, and Conservation  
**Unit 4 Assignment:**  
 Test: Energy Resources  
 Summative, multiple choice assessments. Students will answer questions analyzing how human activities can have a negative impact on the environment. They will also identify the ways that humans can prevent pollution and practice environmental conservation methods.

106671 **Unit 6 Assignment:**  
 106663 Activity: Ecological Footprint  
 Test: Sustainability  
 Summative, multiple choice assessment. Students will answer questions addressing which human activities, and population size and resource management/use, affect environmental quality the most.

| <a href="#">SC.912.N.2.1:</a> | Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science).   |
| <a href="#">SC.912.N.3.1:</a> | Explain that a scientific theory is the culmination of many scientific investigations drawing together all the current evidence concerning a substantial range of phenomena; thus, a scientific theory represents the most powerful explanation scientists have to offer. |
| <a href="#">SC.912.N.4.1:</a> | Explain how scientific knowledge and reasoning provide an empirically-based perspective to inform society's decision making.  |
| <a href="#">SC.912.N.1.2:</a> | Describe and explain what characterizes science and its methods.  |

|  |
|--|
| <b>329573 Environmental Science B Unit 6: Sustainability</b>   |
| Unit 6 Paper Assignment: How Can I Make a Difference? Instructions   |
| Instructions and rubric for research paper. Students understand that the resources they use for researching how they can make a difference and help preserve the environment need to be unbiased and factual, not a person's opinion.  |
| <b>351847 Environmental Science A Unit 1: Nature of Science</b>  |
| Ways of Knowing  |
| Text-based lesson. Students will understand the difference between questions that can be answered using the scientific method and those that cannot. Students will also learn the difference between science and pseudoscience, and how pseudoscience resembles science but does not meet certain scientific criteria. |
| <b>329318 Environmental Science A Unit 1: Nature of Science</b>  |
| How Scientists Work  |
| Text-based lesson. Students will understand how scientific theories are developed by scientists through experimentation and investigations.  |
| <b>329318 Environmental Science A Unit 1: Nature of Science</b>  |
| How Scientists Work  |
| Text-based lessons including multimedia. Students read and observe multimedia presentations explaining how improvements in scientific knowledge and technology have allowed governments and society to make policies using scientific tools.   |
| <b>329318 Environmental Science A Unit 1: Nature of Science</b>  |
| How Scientists Work  |
| Text-based lessons. Students will gain an understanding of the scientific method and how it is used to provide answers, through experimentation, for natural phenomena, and what constitutes good scientific practices.  |

|   |
|---|
| <b>Unit 6 Assignment:</b>   |
| Paper: How Can I Make a Difference?   |
| Research paper. Students will write a paper, performing research from various resources and citing the unbiased, scientific sources from which they found their information.  |
| <b>106567 Unit 1 Assignment:</b>  |
| Assignment: How Scientists Work, Tools and Technology, and Environmental History  |
| Formative, multiple choice assessment. Students will answer questions identifying if scenarios can be studied scientifically or if they are pseudoscience. They will also identify the criteria that pseudoscience lacks in being able to qualify as science or be scientifically assessed. |
| <b>106560 Unit 1 Assignment:</b>  |
| Test: Nature of Science   |
| Summative, multiple choice assessment. Students will answer questions explaining how scientific theories are formed and determine whether hypotheses in different scenarios can be classified as a theory.  |
| <b>106560 Unit 1 Assignment:</b>  |
| Test: Nature of Science   |
| Summative, multiple choice assessment. Students will answer questions explaining how scientific tools and technologies have allowed governments to create policy and analyze scenarios in which this occurred.  |
| <b>106560 Unit 1 Assignment:</b>  |
| Test: Nature of Science   |
| Summative, multiple choice assessment. Students will answer questions describing what science is and how to use the scientific method in experimentation.   |

|                               |   |
|-------------------------------|---|
| <a href="#">SC.912.N.2.2:</a> | Identify which questions can be answered through science and which questions are outside the boundaries of scientific investigation, such as questions addressed by other ways of knowing, such as art, philosophy, and religion.   |
| <a href="#">SC.912.N.1.3:</a> | Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented.   |
| <a href="#">SC.912.N.1.4:</a> | Identify sources of information and assess their reliability according to the strict standards of scientific investigation.   |
| <a href="#">SC.912.N.2.4:</a> | Explain that scientific knowledge is both durable and robust and open to change. Scientific knowledge can change because it is often examined and re-examined by new investigations and scientific argumentation. Because of these frequent examinations, scientific knowledge becomes stronger, leading to its durability. |

|   |
|---|
| <b>351847 Environmental Science A Unit 1: Nature of Science</b>   |
| Ways of Knowing   |
| Text-based lesson. Students will understand the difference between questions that can be answered using the scientific method and those that cannot. Students will also learn that questions regarding philosophy, religion, and personal beliefs cannot be assessed using the scientific method. They will lastly understand how science is limited by these types of questions. |
| <b>351847 Environmental Science A Unit 1: Nature of Science</b>   |
| Ways of Knowing   |
| Text-based lesson. Students will learn that scientific claims are scrutinized by other scientists during the process of peer review, that repeated experimentation and observation validate scientific laws and theories, respectively, and that alternate explanations can prove law and theories wrong as technology and knowledge improves.                                    |

| <b>329324 Ways of Knowing</b>   |
| Tools and Technology  |
| Text-based lessons. Students will understand that the scientific method must be followed for experimental results to be considered valid and that repeated experimentation further validates results.   |
| <b>329318 Environmental Science A Unit 1: Nature of Science</b>   |
| <b>329324 How Scientists Work</b>   |
| Tools and Technology  |
| Text-based lesson. Students will understand that scientific knowledge can change as new ideas, technology, and developments are created by scientists, building upon previous knowledge.  |

|   |
|---|
| <b>106567 Unit 1 Assignment:</b>  |
| Assignment: How Scientists Work, Tools and Technology, and Environmental History  |
| Formative, multiple choice assessment. Students will answer questions identifying whether scenarios including those regarding a person's opinion, belief system, religion, or philosophy, can be answered using science or not. They will also answer questions identifying why science is limited in answering these types of questions. |
| <b>106567 Unit 1 Assignment:</b>  |
| Assignment: How Scientists Work, Tools and Technology, and Environmental History  |
| Formative, multiple choice assessment. Students will answer questions determining if scientists in scenarios were biased when making scientific claims, what processes are used to validate scientific claims, and determine when a scientific theory or law might be questioned.   |
| <b>106560 Unit 1 Assignment:</b>  |
| Test: Nature of Science   |
| Summative, multiple choice assessment. Students will answer questions containing examples and scenarios where scientific knowledge changed or could change with the development of new technology, idea, and advancements in the different fields of science.   |
| <b>106560 Unit 1 Assignment:</b>  |
| Test: Nature of Science   |
| Summative, multiple choice assessment. Students will answer questions containing examples and scenarios where scientific knowledge changed or could change with the development of new technology, idea, and advancements in the different fields of science.   |

|                                 |  |
|---------------------------------|--|
| <a href="#">SC.912.N.1.5:</a>   | Describe and provide examples of how similar investigations conducted in many parts of the world result in the same outcome.   |
| <a href="#">SC.912.N.3.5:</a>   | Describe the function of models in science, and identify the wide range of models used in science.                             |
| <a href="#">SC.912.N.1.6:</a>   | Describe how scientific inferences are drawn from scientific observations and provide examples from the content being studied. |
| <a href="#">SC.912.P.1.0.1:</a> | Differentiate among the various forms of energy and recognize that they can be transformed from one form to others.            |

|   |  |
|---|--|
| 329395 <b>Environmental Science A Unit 3: Populations and How They Change</b> | Evolution<br><br>Text-based lesson. Students will read that scientific experiments, when repeated by other scientists any where else in the world, should yield the same results in order for the results to be valid.   |
| 329318 <b>Environmental Science A Unit 1: Nature of Science</b>               | How Scientists Work<br><br>Text-based lesson. Students will understand how models are used to represent scientific phenomena and their limitations.  |
| 329395 <b>Environmental Science A Unit 3: Populations and How They Change</b> | Evolution<br><br>Text-based lesson. Students will understand how scientific inferences can be drawn by repeatedly observing a naturally occurring phenomenon in the same way, as scientists have done by comparing biological structures of organisms to support the theory of evolution.                    |
| 329344 <b>Environmental Science A Unit 2: Living in the Biosphere</b>         |  |
| 329444 <b>Matter and Energy Flow within Ecosystems</b>                        |  |
| 352384 <b>Environmental Science B Unit 4: Energy Resources</b>                | Energy Use<br><br>Types of Energy<br><br>Text-based lessons including diagrams. Students will learn about the different forms of energy and how we use them. Students will also understand that energy can be converted from one form to another, and will identify the differences between forms of energy. |

|                                  |  |
|----------------------------------|--|
| <b>Unit 3 Assignment:</b>        | Test: Populations and How They Change<br><br>Summative, multiple choice assessment. Students will answer questions describing the development of the theory of evolution and how the development of the theory accepted by the scientific community today came about from the ideas of many different types of scientists studying different areas of science. |
| <b>106560 Unit 1 Assignment:</b> | Test: Nature of Science<br><br>Summative, multiple choice assessment. Students will answer questions describing the types of models that should be used in different scenarios.  |
| <b>122660 Unit 3 Assignment:</b> | Discussion: Observations and Inferences<br><br>Peer-to-peer, interactive discussion. Students will read and research a scientific article and provide at least one observation and inference, respectively, and explain how these are used to gather scientific evidence.  |
| <b>106625 Unit 4 Assignment:</b> | Assignment: Nonrenewable and Renewable Energy Resources<br><br>Formative, multiple choice assessment. Students will answer questions determining what form of energy is being produced from different objects and sources. Students will also answer questions identifying what type of energy transformed into another in different scenarios.                |

|                                    |   |
|------------------------------------|---|
| <a href="#">SC.912.P.1.0.2:</a>    | Explore the Law of Conservation of Energy by differentiating among open, closed, and isolated systems and explain that the total energy in an isolated system is a conserved quantity.  |
| <a href="#">HE.912.C.1.3:</a>      | Evaluate how environment and personal health are interrelated.  |
| <a href="#">HE.912.C.1.4:</a>      | Analyze how heredity and family history can impact personal health.   |
| <a href="#">MACC.912.F.JF.3.7:</a> | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.<br><br>a. Graph linear and quadratic functions and show intercepts, maxima, and minima.<br>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.<br>c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.<br>d. Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.<br>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude. |

|   |   |

| 329344 <b>Environmental Science A Unit 2: Living in the Biosphere</b>         |   |
| 329444 <b>Matter and Energy Flow within Ecosystems</b>                        |   |
| <b>Environmental Science B Unit 4: Energy Resources</b>                       |   |
| Energy Use  |   |
|   | Text-based lessons including diagrams. Students will understand how to relate the Law of Conservation of Energy to energy in systems, and be able to distinguish between open and closed systems. |
| 329467 <b>Environmental Science A Unit 5: Food, Agriculture, and Waste</b>    |   |
| 329514 <b>Food and Nutrition</b>  |   |
| <b>Environmental Science B Unit 5: The Atmosphere and Climate</b>             |   |
| Air Pollution   |   |
|   | Text-based lessons. Students will learn about how lifestyle and environmental factors affect an individual's health.  |
| 329380 <b>Environmental Science A Unit 3: Populations and How They Change</b> |   |
| Human Populations   |   |
|   | Text-based lesson. Students will understand how genetic mutations, heredity, and a family's genetic history can affect a human's health and how diseases can be passed from parent to offspring.  |

|  |   |
|--|---|
| <b>106571 Unit 2 Assignment:</b>                         | Test: Living in the Biosphere<br><br>Summative, multiple choice assessment. Students will answer questions differentiating between open and closed systems, and explain how the Law of Conservation of Energy relates to energy in these types of systems.  |
| <b>106628 Environmental Science A Unit 5 Assignment:</b> | Test: Food, Agriculture, and Waste<br><br><b>Environmental Science B Unit 5 Assignment:</b><br><br>Test: The Atmosphere and Climate<br><br>Summative, multiple choice assessments. Students will answer questions explaining how a combination of lifestyle choice and environmental factors can affect an individual's health, and what they can do to improve their health. |
| <b>106597 Unit 3 Assignment:</b>                         | Human Populations<br><br>Formative, multiple choice assessments. Students will answer questions explaining how genetic factors that can lead to harmful mutations in humans and be inherited from parent organisms. Students will also identify hereditary diseases and how they impact the well being of offspring.  |

|                                     |   |
|-------------------------------------|---|
| <a href="#">MACC.912.N.Q.1.1:</a>   | Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays. |
| <a href="#">MACC.912.N.Q.1.3:</a>   | Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.   |
| <a href="#">LACC.111.2.RST.1.1:</a> | Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.                                  |
| <a href="#">LACC.111.2.RST.1.3:</a> | Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks; analyze the specific results based on explanations in the text.                           |
| <a href="#">LACC.111.2.RST.2.4:</a> | Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 11–12 texts and topics.                          |

|   |   |
|---|---|
| 329324 <b>Environmental Science A Unit 1: Nature of Science</b>     | Tools and Technology<br><br>Text-based lesson. Students will understand that units are important to determining the magnitude of measurements, and will observe different data tools used during experiments. |
| 329324 <b>Environmental Science A Unit 1: Nature of Science</b>     | Tools and Technology<br><br>Text-based lesson. Students will learn the definition of accuracy and precision, and how these concepts are applied to scientific measurements.                                   |
| 329372 <b>Environmental Science B Unit 6: Sustainability</b>        | Making a Difference<br><br>Text-based lesson. Students will read about examples of different environmental and ecological issues in their community and on Earth.   |
| 329436 <b>Environmental Science Unit 4: Soil and Land Resources</b> | Soil Lab<br><br>Hands-on lab lesson. Students will read through a procedure they must follow and understand that they must acquire observations and data throughout the lab.                                  |
| 329324 <b>Environmental Science A Unit 1: Nature of Science</b>     |   |
| 329326 <b>Tools and Technology</b>                                  | Environmental Literacy<br><br>Text-based lessons. Students will understand the meaning to important definitions and concepts regarding the environment.   |

|                                  |   |
|----------------------------------|---|
| 106560 <b>Unit 1 Assignment:</b> | Test: Nature of Science<br><br>Summative, multiple choice assessment. Students will determine the units that should be used in different scenarios, and will be asked to answer questions by analyzing graphs and other data tools. |
| 106560 <b>Unit 1 Assignment:</b> | Test: Nature of Science<br><br>Summative, multiple choice assessment. Students will answer questions determining whether scientific measurements were precise, accurate, both or neither.   |
| 106678 <b>Unit 6 Assignment:</b> | Paper: How Can I Make a Difference?<br><br>Research paper. Students will write a paper, performing research from various resources and citing the sources from which they found their information.                                  |
| 106613 <b>Unit 4 Assignment:</b> | Activity: Soil<br><br>Hands-on lab lesson. Students will follow a procedure from the lesson when performing the lab, and record their observations and data about soil samples in the lab report.                                   |

|                                      |   |
|--------------------------------------|---|
| <a href="#">LACC.111.2.RST.3.7:</a>  | Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem.   |
| <a href="#">LACC.111.2.RST.4.10:</a> | By the end of grade 12, read and comprehend science/technical texts in the grades 11–12 text complexity band independently and proficiently.  |
| <a href="#">LACC.111.2.WHST.1.2:</a> | Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.<br><br>a. Introduce a topic and organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.<br><br>b. Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.<br><br>c. Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts. |

|------------------------------------|---|--|--|
| <a href="#">LACC.68.WHST.1.2a.</a> | Introduce a topic clearly, previewing what is to follow; organize ideas, concepts, and information into broader categories as appropriate to achieving purpose; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension. | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan Instructions<br>Supported by the "Basics of Grammar and Effective Writing" resource, a rubric, and direct teacher interaction, students learn to introduce a topic clearly, previewing what is to follow, organize ideas, concepts, and information into broader categories as appropriate to achieving purpose; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension. | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan<br>In a graded, summative writing product, students demonstrate their ability to introduce a topic clearly, previewing what is to follow, organize ideas, concepts, and information into broader categories as appropriate to achieving purpose; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension by writing a public policy plan. |
| <a href="#">LACC.68.WHST.1.2b.</a> | Develop the topic with relevant, well-chosen facts, definitions, concrete details, quotations, or other information and examples.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan Instructions<br>Supported by the "Basics of Grammar and Effective Writing" resource, a rubric, and direct teacher interaction, students learn to develop the topic with relevant, well-chosen facts, definitions, concrete details, quotations, or other information and examples.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan<br>In a graded, summative writing product, students demonstrate their ability to develop the topic with relevant, well-chosen facts, definitions, concrete details, quotations, or other information and examples.   |
| <a href="#">LACC.68.WHST.1.2c.</a> | Use appropriate and varied transitions to create cohesion and clarify the relationships among ideas and concepts.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan Instructions<br>Supported by the "Basics of Grammar and Effective Writing" resource, a rubric, and direct teacher interaction, students learn to use appropriate and varied transitions to create cohesion and clarify the relationships among ideas and concepts.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan<br>In a graded, summative writing product, students demonstrate their ability to use appropriate and varied transitions to create cohesion and clarify the relationships among ideas and concepts by writing a public policy plan.   |
| <a href="#">LACC.68.WHST.1.2d.</a> | Use precise language and domain-specific vocabulary to inform about or explain the topic.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan Instructions<br>Supported by the "Basics of Grammar and Effective Writing" resource, a rubric, and direct teacher interaction, students learn to use precise language and domain-specific vocabulary to inform about or explain the topic.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan<br>In a graded, summative writing product, students demonstrate their ability to use precise language and domain-specific vocabulary to inform about or explain the topic by writing a public policy plan.   |
| <a href="#">LACC.68.WHST.1.2e.</a> | Establish and maintain a formal style and objective tone.   | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan Instructions<br>Basics of Grammar and Effective Writing<br>Supported by the "Basics of Grammar and Effective Writing" resource, a rubric, and direct teacher interaction, students learn to establish and maintain a formal style and objective tone.  | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan<br>In a graded, summative writing product, students demonstrate their ability to establish and maintain a formal style and objective tone by writing a public policy plan.   |
| <a href="#">LACC.68.WHST.1.2f.</a> | Provide a concluding statement or section that follows from and supports the information or explanation presented.  | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan Instructions<br>Supported by the "Basics of Grammar and Effective Writing" resource, a rubric, and direct teacher interaction, students learn to provide a concluding statement or section that follows from and supports the information or explanation presented.  | MS Civics Unit 9: State and Local Government<br>* Paper: Public Policy Plan<br>In a graded, summative writing product, students demonstrate their ability to provide a concluding statement or section that follows from and supports the information or explanation presented by writing a public policy plan.  |
| <a href="#">SS.7.C.1.1.</a>        | Recognize how Enlightenment ideas including Montesquieu's view of separation of power and John Locke's theories related to natural law and how Locke's social contract influenced the Founding Fathers.   | MS Civics Unit 2: Origins of American Government<br>* Influence of Philosophers<br>* Video: <i>All About the Enlightenment: The Age of Reason</i><br>Through a video clip and a text-based lesson, students learn to recognize how Enlightenment ideas influenced the Founding Fathers.  | MS Civics Unit 2: Origins of American Government<br>* Unit Test: Origins of American Government<br>In a graded, summative assessment, students demonstrate their recognition of how Enlightenment ideas including Montesquieu's view of separation of power, and John Locke's theories of natural law and the social contract, influenced the Founding Fathers by answering objective multiple choice questions.   |

|                             |  |   |   |
|-----------------------------|--|---|---|
| <a href="#">SS.7.C.2.1.</a> | Define the term "citizen," and identify legal means of becoming a United States citizen.   | MS Civics Unit 1: Fundamentals of Government<br>* Citizenship<br>* Video: <i>Who is a Citizen?</i><br>Through a video clip and a text-based lesson, students learn to define citizenship, and identify legal means of becoming a United States citizen.   | MS Civics Unit 1: Fundamentals of Government<br>* Unit Test: Fundamentals of Government<br>In a graded, summative assessment, students demonstrate their ability to define the "term" citizenship, and their ability to identify legal means of becoming a United States citizen by answering objective multiple choice questions.                                  |
| <a href="#">SS.7.C.3.1.</a> | Compare different forms of government (direct democracy, representative democracy, socialism, communism, monarchy, oligarchy, autocracy).                  | MS Civics Unit 1: Fundamentals of Government<br>* Forms of Government<br>Through a text-based lesson, students learn to compare different forms of government.  | MS Civics Unit 1: Fundamentals of Government<br>* Unit Test: Fundamentals of Government<br>In a graded, summative assessment, students demonstrate their ability to compare different forms of government (such as direct and representative democracy, socialism, communism, monarchy, oligarchy, and autocracy) by answering objective multiple choice questions. |
| <a href="#">SS.7.C.4.1.</a> | Differentiate concepts related to United States domestic and foreign policy.   | MS Civics Unit 8: The Chief Executive<br>* Roles of the President<br>* Executive Powers<br>* Foreign Policy Powers<br>* Video: <i>Foreign Policy and the Presidential Veto</i><br>* Video: <i>The Powers and Duties of the Executive Branch</i><br>Through text-based lessons and a video clip, students learn to differentiate concepts related to domestic and foreign policy by examining the president's roles as party leader in domestic political negotiations, and as chief diplomat in treaty negotiations and the establishment of foreign policy doctrine. | MS Civics Unit 8: The Chief Executive<br>* Unit Test: The Chief Executive<br>In a graded, summative assessment, students demonstrate their ability to differentiate concepts related to United States domestic and foreign policy by answering objective multiple choice questions.   |
| <a href="#">SS.7.C.1.2.</a> | Trace the impact that the Magna Carta, English Bill of Rights, Mayflower Compact, and Thomas Paine's "Common Sense" had on colonists' views of government. | MS Civics Unit 2: Origins of American Government<br>* The English System<br>* The Declaration of Independence<br>* Video: <i>Writing the Declaration of Independence</i><br>Through text-based lessons and a video clip, students learn to trace the impact of the Magna Carta, the English Bill of Rights, the Mayflower Compact, and Thomas Paine's "Common Sense" on colonists' views of government.   | MS Civics Unit 2: Origins of American Government<br>In a graded, summative assessment, students demonstrate their ability to trace the impact of the Magna Carta, English Bill of Rights, Mayflower Compact, and Thomas Paine's "Common Sense" on colonists' views of government by answering objective multiple choice questions.                                  |
| <a href="#">SS.7.C.2.2.</a> | Evaluate the obligations citizens have to obey laws, pay taxes, defend the nation, and serve on juries.  | MS Civics Unit 1: Fundamentals of Government<br>* Citizenship<br>* Video: <i>Who is a Citizen?</i><br>Through a text-based lesson and a video clip, students learn to evaluate the obligations citizens have to obey laws, pay taxes, defend the nation, and serve on juries.   | MS Civics Unit 1 Test: Fundamentals of Government<br>* Unit Test: Fundamentals of Government<br>In a graded, summative assessment, students demonstrate their ability to evaluate the obligations citizens have to obey laws, pay taxes, defend the nation, and serve on juries by answering objective multiple choice questions.                                   |
| <a href="#">SS.7.C.3.2.</a> | Compare parliamentary, federal, confederal, and unitary systems of government.   | MS Civics Unit 1: Fundamentals of Government<br>* Forms of Government<br>MS Civics Unit 4: Federalism<br>* Federal, Unitary, and Confederate Governments<br>Through a text-based lesson, students learn to compare parliamentary, federal, confederal, and unitary systems of government.   | MS Civics Unit 4 Test: Federalism<br>* Unit Test: Federalism<br>In a graded, summative assessment, students demonstrate their ability to compare parliamentary, federal, confederal, and unitary systems of government by answering objective multiple choice questions.  |

|                             |  |   |   |
|-----------------------------|--|---|---|
| <a href="#">SS.7.C.4.2:</a> | Recognize government and citizen participation in international organizations.   | MS Civics Unit 1: Fundamentals of Government<br><br>* Citizenship<br><br>Through a text-based lesson and Internet research activity, students learn to recognize government and citizen participation in international organizations by examining specific examples such as the United Nations, the International Atomic Energy Agency, the World Health Organization, Amnesty International, Greenpeace, and Doctors Without Borders.  | MS Civics Unit 1 Test: Fundamentals of Government<br><br>* Unit Test: Fundamentals of Government<br><br>In a graded, summative assessment, students demonstrate their ability to recognize government and citizen participation in international organizations by answering objective multiple choice questions.  |
| <a href="#">SS.7.C.1.3:</a> | Describe how English policies and responses to colonial concerns led to the writing of the Declaration of Independence.  | MS Civics Unit 2: Origins of American Government<br><br>* The Declaration of Independence<br>* Video: <i>Writing the Declaration of Independence</i><br><br>Through a text-based lesson and a video clip, students learn to describe how English policies and responses to colonial concerns led to the writing of the Declaration of Independence.   | MS Civics Unit 2 Test: Origins of American Government<br><br>* Unit Test: Origins of American Government<br><br>In a graded, summative assessment, students demonstrate their ability to describe how English policies and responses to colonial concerns led to the writing of the Declaration of Independence by answering objective multiple choice questions.   |
| <a href="#">SS.7.C.2.3:</a> | Experience the responsibilities of citizens at the local, state, or federal levels.  | MS Civics Unit 9: State and Local Government<br><br>* Unit 9 Activity: Mock Election Instructions<br><br>Through a text-based lesson, students experience the responsibilities of citizens at the local level by conducting a mock election in which they vote for one of three hypothetical candidates based upon qualifications and policy positions on important local issues such as crime, education, and infrastructure maintenance.  | MS Civics Unit 9: State and Local Government<br><br>* Activity: Mock Election<br><br>In a graded, formative writing product, students experience the responsibilities of citizens by conducting and reporting the results of a mock election. They present profiles of three hypothetical candidates for local office to an electorate consisting of themselves, their families, and their friends. Students then conduct a secret ballot, compile the results of the mock election, and conduct a run-off election if necessary. In a graded writing product, students present their mock election results and analyze reasons why their winning candidate may have been the most appealing to voters. |
| <a href="#">SS.7.C.3.3:</a> | Illustrate the structure and function (three branches of government established in Articles I, II, and III with corresponding powers) of government in the United States as established in the Constitution. | MS Civics Unit 6: Civil Liberties<br><br>* The Structure and Functions of the Judicial Branch<br>* Video: <i>You, the Jury</i><br><br>MS Civics Unit 7: Congress<br><br>* Video: <i>The Legislative Branch</i><br>* Organization of Congress<br>* Bicameral Congress<br>* Limitations on Congress<br>* Sovereign Powers of Congress<br><br>MS Civics Unit 8: The Chief Executive<br><br>* Roles of the President<br>* Foreign Policy Powers<br>* Video: <i>Foreign Policy and the Presidential Veto</i><br>* <i>Military Powers</i><br>* Increases in Presidential Power<br>* Video: <i>Powers and Duties of the Executive Branch</i><br><br>Through text-based lessons and video clips, students learn to illustrate the structure and function (three branches of government established in Articles I, II, and III with corresponding powers) of government in the United States as established in the Constitution. | MS Civics Unit 6: Civil Liberties<br><br>* Unit Test: Civil Liberties<br><br>MS Civics Unit 7: Congress<br><br>* Unit Test: Congress<br><br>MS Civics Unit 8: The Chief Executive<br><br>* Unit Test: The Chief Executive<br><br>In a graded, summative assessment, students demonstrate their ability to illustrate the structure and function (three branches of government established in Articles I, II, and III with corresponding powers) of government in the United States as established in the Constitution by answering objective multiple choice questions.   |

|                             |   |  |   |
|-----------------------------|---|--|---|
| <a href="#">SS.7.C.4.3:</a> | Describe examples of how the United States has dealt with international conflicts.                                      | MS Civics Unit 8: The Chief Executive<br><br>* Roles of the President<br>* Foreign Policy Powers<br>* Video: <i>Foreign Policy and the Presidential Veto</i><br>* <i>Military Powers</i><br>* Increases in Presidential Power<br>* Video: <i>Powers and Duties of the Executive Branch</i><br><br>Through text-based lessons and video clips, students learn to describe examples of how the United States has dealt with international conflicts.   | MS Civics Unit 8 Test: The Chief Executive<br><br>In a graded, summative assessment, students demonstrate their ability to describe examples of how the United States has dealt with international conflicts by answering objective multiple choice questions.  |
| <a href="#">SS.7.C.1.4:</a> | Analyze the ideas (natural rights, role of the government) and complaints set forth in the Declaration of Independence. | MS Civics Unit 2: Origins of American Government<br><br>* The Declaration of Independence<br>* Video: <i>Writing the Declaration of Independence</i><br><br>Through a text-based lesson and a video clip, students learn to analyze the ideas and complaints set forth in the Declaration of Independence.   | MS Civics Unit 2: Origins of American Government<br><br>* Unit Test: Origins of American Government<br><br>In a graded, summative assessment, students demonstrate their understanding of the ideas and complaints set forth in the Declaration of Independence by answering objective multiple choice questions.   |
| <a href="#">SS.7.C.2.4:</a> | Evaluate rights contained in the Bill of Rights and other amendments to the Constitution.                               | MS Civics Unit 2: Origins of American Government<br><br>* Establishing the Bill of Rights<br>* Video: <i>Establishing the Bill of Rights</i><br><br>MS Civics Unit 3: The Constitution of the United States<br><br>* Structure of the Constitution<br>* Amending the Constitution<br>* The Incorporation Doctrine<br><br>MS Civics Unit 6: Civil Liberties<br><br>* Free Exercise Clause<br>* Free Speech<br>* Free Press<br>* Freedom of Assembly and the Right to Petition<br>* The Second and Third Amendments<br>* The Fourth Amendment<br>* The Fifth Amendment<br>* The Sixth, Seventh, and Eighth Amendments<br>* The Ninth and Tenth Amendments<br>* The Post-Civil War Amendments<br>* Video: <i>The Government and Civil Rights</i><br><br>Through text-based lessons and video clips, students learn to evaluate rights contained in the Bill of Rights and other amendments to the Constitution. | MS Civics Unit 2: Origins of American Government<br><br>* Unit Test: Origins of American Government<br><br>MS Civics Unit 3: The Constitution of the United States<br><br>* Unit Test: The Constitution of the United States<br><br>MS Civics Unit 6: Civil Liberties<br><br>* Unit Test: Civil Liberties<br><br>In graded, summative assessments, students demonstrate their ability to evaluate rights contained in the Bill of Rights and other amendments to the Constitution by answering objective multiple choice questions. |

| <a href="#">MACC.K12.MP.1.1:</a> | <b>Make sense of problems and persevere in solving them.</b><br><br>Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches. | 344243 | Economics Unit 5<br>Analyzing Demand Graphs<br>Students will look at examples of demand graphs and interpret these graphs into concrete mathematical formulas   | 117950 | Economics Unit 5<br>Assignment: Creating your Own Demand Schedule<br>In this assignment, students will create an individual demand schedule using correct mathematical solutions  |
| <a href="#">MACC.K12.MP.3.1:</a> | <b>Construct viable arguments and critique the reasoning of others.</b>  |        |   |        |   |

|                                  |   |        |  |        |  |
|----------------------------------|---|--------|--|--------|--|
|                                  | Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.       | 117948 | Economics Unit 5<br>Assignment: Analyzing Supply and Demand Graphs<br>in a series of multiple choice questions, students will interpret data from a chart.                           | 117948 | Economics Unit 5<br>Assignment: Analyzing Supply and Demand Graphs<br>in a series of multiple choice questions, students will interpret data from a chart, analyzing situations and breaking them down into cases. |
| <a href="#">MACC.K12.MP.5.1:</a> | <b>Use appropriate tools strategically.</b><br><br>Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts. | 348998 | Economics Unit 1<br>The Importance of Saving<br>This exercise introduces students to the formula for interest rates and will help students use a calculator to solve these problems. | 120042 | Economics Unit 1<br>Assignment: Saving<br>In this exercise, students will use mathematical tools such as calculators to solve problems concerning savings accounts.  |
| <a href="#">MACC.K12.MP.6.1:</a> | <b>Attend to precision.</b><br><br>Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.  | 344178 | Economics Unit 2 Decision Making<br>This lesson will teach students how to create a decision making grid using real-world scenarios.   | 117911 | Economics Unit 2<br>Creating a Decision-Making Grid<br>This assignment will help students examine how to complete a decision making grid.  |
| <a href="#">LACC.910.RH.1.1:</a> | Cite specific textual evidence to support analysis of primary and secondary sources, attending to such features as the date and origin of the information.  | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will read about differing founders' viewpoints about economics.  | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will demonstrate knowledge of the different philosophies of some of the founders of modern economics.      |

| SS.912.E.1.12: | Examine the four phases of the business cycle (peak, contraction - unemployment, trough, expansion - inflation).   | 344288                     | Economics Unit 7<br>Business Cycles<br>In a text based lesson with graphic demonstrations, students will examine the four phases of the business cycle (peak, contraction - unemployment, trough, expansion - inflation).   | 117971 | Economics Unit 7<br>Assignment: Economic Performance and Business Cycles<br>Through formative and summative assessments and multiple choice comprehension questions, students will examine the four phases of the business cycle.  |
| SS.912.E.1.12: | Construct a circular flow diagram for an open-market economy including elements of households, firms, government, financial institutions, product and factor markets, and international trade. | 344195                     | Economics Unit 3<br>The Operations of a Free Market Economy<br>In a text based lesson with graphic examples, students will construct a circular flow diagram for an open-market economy including elements of households, firms, government, financial institutions, product and factor markets, and international trade. | 117918 | Economics Unit 3<br>Assignment: Types of Economic Systems<br>Through formative and summative assessments, students will construct a circular flow diagram for an open-market economy including elements of households, firms, government, financial institutions, product and factor markets, and international trade. |
| SS.912.E.1.13: | Explain the basic functions and characteristics of money, and describe the composition of the money supply in the United States.   | 344267                     | Economics Unit 6<br>Money and Banking<br>In a text-based lesson including practice exercises, students will explain the basic functions and characteristics of money, and describe the composition of the money supply in the United States.  | 344267 | Economics Unit 6<br>Practice Activity: The Characteristics of Money<br>Practice Activity<br>In an interactive quiz, students will explain the basic functions and characteristics of money, and describe the composition of the money supply in the United States.   |
| SS.912.E.1.14: | Compare credit, savings, and investment services available to the consumer from financial institutions.  | 348994<br>349001<br>348987 | Economics Unit 1<br>Checking Accounts<br>Planning for Retirement<br>Borrowing Money<br>In a text-based lesson including practice exercises, students will compare credit, savings, and investment services available to the consumer from financial institutions.   | 120042 | Economics Unit 1<br>Assignment: Saving<br>Through formative and summative assessments and multiple choice comprehension questions, students will compare credit, savings, and investment services available to the consumer from financial institutions.   |
| SS.912.E.1.15: | Describe the risk and return profiles of various investment vehicles and the importance of diversification.  | 349001                     | Economics Unit 1<br>Planning for Retirement<br>In a text-based lesson including practice exercises, students will describe the risk and return profiles of various investment vehicles and the importance of diversification.   | 120041 | Economics Unit 1 Test:<br>In a graded formative assessment, students answer multiple choice questions over the risk and return profiles of various investment vehicles and the importance of diversification.  |
| SS.912.E.1.16: | Construct a one-year budget plan for a specific career path including expenses and construction of a credit plan for purchasing a major item.  |                            | need to create a practice activity in Unit 1  |        | need to create a practice activity in unit 1   |

|                  |  |        |   |        |  |
|------------------|--|--------|---|--------|--|
| SS.912.G.2.2:    | Describe the factors and processes that contribute to the differences between developing and developed regions of the world.   | 344321 | Economics Unit 8<br>The World Bank<br>In a text based lesson, students will describe some of the factors and processes that contribute to the differences between developing and developed regions of the world.  | 117992 | Economics Unit 8<br>Assignment: Economic Development and the World Bank:<br>In a graded formative assessment, students will describe the factors and processes that contribute to the differences between developing and developed regions of the world.   |
| SS.912.G.3.3:    | Use geographic terms and tools to explain differing perspectives on the use of renewable and non-renewable resources in Florida, the United States, and the world.   | 344191 | Economics Unit 3<br>The Location of Resources Around the World<br>In a text based lesson with practice activities, students will use geographic terms and tools to explain differing perspectives on the use of renewable and non-renewable resources in the United States and the world. | 117916 | Economics Unit 3<br>Assignment: Answering Economic Questions and prioritizing Economic Goals:<br>Through formative and summative assessments and multiple choice comprehension questions, students will use geographic terms and tools to explain differing perspectives on the use of renewable and non-renewable resources in Florida, the United States, and the world. |
| SS.912.G.4.4:    | Use geographic terms and tools to analyze case studies of issues in globalization.   | 344312 | Economics Unit 8 Activity:<br>International Trade Article Instructions<br>In this writing assignment, students will use geographic terms and tools to analyze case studies of issues in globalization. Revised assignment   | 117990 | Economics Unit 8 Activity:<br>International Trade Article<br>In this writing assignment, students will use geographic terms and tools to analyze case studies of issues in globalization.  |
| MACC.K12.MP.1.1: | <b>Make sense of problems and persevere in solving them.</b><br><br>Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches. | 344243 | Economics Unit 5<br>Analyzing Demand Graphs<br>Students will look at examples of demand graphs and interpret these graphs into concrete mathematical formulas   | 117950 | Economics Unit 5<br>Assignment: Creating your Own Demand Schedule<br>In this assignment, students will create an individual demand schedule using correct mathematical solutions   |
| MACC.K12.MP.3.1: | <b>Construct viable arguments and critique the reasoning of others.</b>  |        |   |        |  |

|                  |   |        |  |        |  |
|------------------|---|--------|--|--------|--|
|                  | Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments. | 117948 | Economics Unit 5<br>Assignment: Analyzing Supply and Demand Graphs<br>In a series of multiple choice questions, students will interpret data from a chart.                           | 117948 | Economics Unit 5<br>Assignment: Analyzing Supply and Demand Graphs<br>In a series of multiple choice questions, students will interpret data from a chart, analyzing situations and breaking them down into cases. |
| MACC.K12.MP.5.1: | Use appropriate tools strategically.  |        |  |        |  |
|                  | Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.  | 348998 | Economics Unit 1<br>The Importance of Saving<br>This exercise introduces students to the formula for interest rates and will help students use a calculator to solve these problems. | 120042 | Economics Unit 1<br>Assignment: Saving<br>In this exercise, students will use mathematical tools such as calculators to solve problems concerning savings accounts.  |
| MACC.K12.MP.6.1: | Attend to precision.  |        |  |        |  |
|                  | Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.   | 344178 | Economics Unit 2<br>Decision Making<br>This lesson will teach students how to create a decision making grid using real-world scenarios.  | 117911 | Economics Unit 2<br>Creating a Decision-Making Grid<br>This assignment will help students examine how to complete a decision making grid.  |

|------------------|--|--------|---|--------|---|
| LACC.910.RH.1.1: | Cite specific textual evidence to support analysis of primary and secondary sources, attending to such features as the date and origin of the information.                       | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will read about differing founders' viewpoints about economics.   | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will demonstrate knowledge of the different philosophies of some of the founders of modern economics. |
| LACC.910.RH.1.2: | Determine the central ideas or information of a primary or secondary source; provide an accurate summary of how key events or ideas develop over the course of the text.         | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will read about differing founders' viewpoints about economics.   | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will demonstrate knowledge of the different philosophies of some of the founders of modern economics. |
| LACC.910.RH.1.3: | Analyze in detail a series of events described in a text; determine whether earlier events caused later ones or simply preceded them.  | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will analyze in detail a series of events described in a text   | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will analyze in detail a series of events described in a text.  |
| LACC.910.RH.2.4: | Determine the meaning of words and phrases as they are used in a text, including vocabulary describing political, social, or economic aspects of history/social science.         | 344172 | Economics Unit 1 Managing Your Personal Finances: Thinking Like an Economist<br>In a text-based lesson, students are taught the meaning of economics and are asked to redefine the terms wants and needs for the duration of the course. In a video lesson, students learn the jargon associated with loans | 177885 | Economics Unit 1 Test<br>Students are asked questions about the key terms they have learned as they apply to economics in the course  |
| LACC.910.RH.2.5: | Analyze how a text uses structure to emphasize key points or advance an explanation or analysis.   |        |   |        |   |
| LACC.910.RH.2.6: | Compare the point of view of two or more authors for how they treat the same or similar topics, including which details they include and emphasize in their respective accounts. | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will read about differing founders' viewpoints about economics.   | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will demonstrate knowledge of the different philosophies of some of the founders of modern economics. |
| LACC.910.RH.3.7: | Integrate quantitative or technical analysis (e.g., charts, research data) with qualitative analysis in print or digital text.   | 344200 | Economics Unit 3<br>Mixed or Modernized Economy<br>This lesson will help students understand the mixed economies around the world by analyzing an illustrative map  | 117918 | Economics Unit 3<br>Assignment: Types of Economic Systems<br>In a graded assessment, students will integrate technical analysis in digital form   |

|                    |   |        |   |        |   |
|--------------------|---|--------|---|--------|---|
| LACC.910.RH.3.8:   | Assess the extent to which the reasoning and evidence in a text support the author's claims.  | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will read about differing founders' viewpoints about economics. | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will demonstrate knowledge of the different philosophies of some of the founders of modern economics. |
| LACC.910.RH.3.9:   | Compare and contrast treatments of the same topic in several primary and secondary sources.   | 344172 | Economics Unit 2:<br>Historical Background of Economics<br>Students will read about differing founders' viewpoints about economics. | 177885 | Economics Unit 2<br>Assignment: Historical Background of Economics<br>In a summative activity, students will demonstrate knowledge of the different philosophies of some of the founders of modern economics. |
| LACC.910.RH.4.10:  | By the end of grade 10, read and comprehend history/social studies texts in the grades 9–10 text complexity band independently and proficiently.  |        |   |        |   |
| LACC.910.WHST.1.1: | Write arguments focused on discipline-specific content.   | 117958 | Economics Unit 6 Paper:<br>Starting a new Business<br>In a writing assignment, students will write an economics specific paper      | 117958 | Economics Unit 6 Paper:<br>Starting a new Business<br>In a writing assignment, students will write an economics specific paper  |
|                    | a. Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among the claim(s), counterclaims, reasons, and evidence.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
|                    | b. Develop claim(s) and counterclaims fairly, supplying data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form and in a manner that anticipates the audience's knowledge level and concerns. | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
|                    | c. Use words, phrases, and clauses to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.   | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
|                    | d. Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.   | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
|                    | e. Provide a concluding statement or section that follows from or supports the argument presented.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
| LACC.910.WHST.1.2: | Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
|                    | a. Introduce a topic and organize ideas, concepts, and information to make important connections and distinctions; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.   | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |
|                    | b. Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business  |

|                     |   |        |  |        |  |
|---------------------|---|--------|--|--------|--|
|                     | c. Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among ideas and concepts.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
|                     | d. Use precise language and domain-specific vocabulary to manage the complexity of the topic and convey a style appropriate to the discipline and context as well as to the expertise of likely readers.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
|                     | e. Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.   | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
|                     | f. Provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implications or the significance of the topic).  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.2.4:  | Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.2.5:  | Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.2.6:  | Use technology, including the Internet, to produce, publish, and update individual or shared writing products, taking advantage of technology's capacity to link to other information and to display information flexibly and dynamically.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.3.7:  | Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.3.8:  | Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation. | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.3.9:  | Draw evidence from informational texts to support analysis, reflection, and research.   | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |
| LACC.910.WHST.4.10: | Write routinely over extended time frames (time for reflection and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.  | 117958 | Economics Unit 6 Paper:<br>Starting a new Business | 117958 | Economics Unit 6 Paper:<br>Starting a new Business |

| <p><a href="#">SS.912.G.4.9.</a></p> | <p>Use political maps to describe the change in boundaries and governments within continents over time.</p>                               | <p>Throughout World History A and B, students learn to use political maps to describe the change in boundaries and governments within continents over time.</p> <p>For example:</p> <p><b>World History B Unit 7: World War I</b><br/>World War I</p> <p>Through text-based lessons with both conventional and interactive maps, students learn to use political maps to describe the change in boundaries and governments within continents over time. In one interactive map activity, students move through progressively through the years 1914 to 1918, observing fluctuations in the battle lines over time. In another interactive map activity, students compare how the pre- and post-war borders of European nations were transformed by the outcome of the war and the conditions of the Paris Peace Accords.</p>   | <p>Throughout World History A and B, students complete graded, summative assessments by answering multiple choice questions about how political maps describe the change in boundaries and governments within continents over time.</p> <p>For example:</p> <p><b>World History B Unit 7: World War I</b><br/>Unit Test: World War I</p> <p>In a graded, summative assessment, students demonstrate their ability to use political maps to describe the change in boundaries and governments within continents over time by answering objective multiple choice questions.</p>   |
| <p><a href="#">SS.912.H.3.1.</a></p> | <p>Analyze the effects of transportation, trade, communication, science, and technology on the preservation and diffusion of culture.</p> | <p><b>World History A Unit 7: Empires of India and China</b><br/>China: The Han Dynasty<br/>Video: <i>The Silk Road</i></p> <p><b>World History A Unit 10: Pre-Colonial Africa</b><br/>Environmental Change, Trade, and Islam Transform Africa</p> <p>Through text-based lessons, maps, and a video clip, students learn to analyze the effects of transportation, trade, communication, science, and technology on the preservation and diffusion of culture. Students observe how the Silk Road drove cultural and economic exchange between Asia and Europe.</p>  | <p><b>World History A Unit 7: Empires of India and China</b><br/>Journal: Trade and Diffusion Along the Silk Road</p> <p>In a graded, formative writing product, students analyze the effects of transportation, trade, communication, science, and technology on the preservation and diffusion of culture along the Silk Road</p>  |
| <p><a href="#">SS.912.H.1.3.</a></p> | <p>Relate works in the arts to various cultures.</p>  | <p>Art, architecture, music, and literature are referenced throughout World History A and World History B. Examples are provided as support material throughout each course. Additionally, certain lessons focus on the arts.</p> <p>For example:</p> <p><b>World History A Unit 4: Ancient India, China, and Japan</b><br/>Ancient Japan</p> <p>Through a text-based lesson, students learn to relate Japan's Heian Period to achievement in music, literature and the arts. They read a plot summary of <i>The Tale of Genji</i>, and consider its significance as the world's first novel.</p> <p><b>World History A Unit 11: Medieval East Asia</b><br/>Feudal Japan</p> <p>Through a text-based lesson with a multimedia presentation, students learn to relate works in the arts to feudal Japanese culture. In the interactive multimedia presentation, students select from the categories of visual arts, literature, and the performing arts to learn about Ukiyo-e printing, Haiku poetry, and Noh Theater.</p> <p><b>World History B Unit 2: Renaissance and Reformation</b><br/>Renaissance Architecture</p> <p>Through a text-based lesson with architectural details, students learn to relate the work of Michelangelo to the culture of Renaissance Europe.</p> | <p>Throughout World History A and B, students complete assessments which require them to relate works in the arts to various cultures.</p> <p>For example:</p> <p><b>World History B Unit 2: Renaissance and Reformation</b><br/>Discussion: Masters of the Renaissance</p> <p>In a graded, formative discussion with their peers, students write a paragraph about a Renaissance artist of their choice. They discuss where the artist was born, where he worked, his training in the arts, and for whom he worked. They also discuss the medium (material used to make artworks) he primarily used (e.g., oil paint, marble, stone, prints). Students also consider how it compares to other works of art, and how the artist expresses ideas and themes that were important to people living in his time. Students are required to respond to at least two classmates' entries as part of the discussion.</p> |

|-------------------------------|--|---|---|
| <a href="#">SS.912.W.4.3:</a> | Identify the major artistic, literary, and technological contributions of individuals during the Renaissance.            | <p><b>World History B Unit 2: Renaissance and Reformation</b></p> <p>Renaissance Architecture</p> <p>Through a text-based lesson with architectural details, students learn to recognize the influence of Michelangelo on the architectural and artistic development of Renaissance Italy.</p> <p>The School of Athens<br/>The Art of Renaissance Europe</p> <p>Through a text-based lesson with an interactive multimedia activity, and images of paintings, students learn to recognize the influence of Leonardo da Vinci on the artistic development of Renaissance Italy. In one interactive activity, students identify influential figures depicted in the painting, The School of Athens. In another interactive activity, students toggle between various forms of artistic perspective to see how Renaissance-era innovations revolutionized the visual arts.</p> <p>Literature and Philosophy of the Renaissance</p> <p>Through a text-based lesson, students learn to relate important literary and philosophical works of the Renaissance to their respective cultures by reading summaries of key works by Giovanni Boccaccio, Desiderius Erasmus, Francesco Petrarca, William Shakespeare, Christine de Pisan, Sir Thomas Moore, Niccolò Machiavelli, and Giovanni Pico della Mirandola.</p> | <p><b>World History B Unit 2: Renaissance and Reformation</b></p> <p>Discussion: Masters of the Renaissance</p> <p>In a graded, formative discussion with their peers, students write a paragraph about a Renaissance artist of their choice. They discuss where the artist was born, where he worked, his training in the arts, and for whom he worked. They also discuss the medium (material used to make artworks) he primarily used (e.g., oil paint, marble, stone, prints). Students also consider how it compares to other works of art, and how the artist expresses ideas and themes that were important to people living in his time. Students are required to respond to at least two classmates' entries as part of the discussion.</p> <p>Unit Test: Renaissance and Reformation</p> <p>In a graded, summative assessment, students demonstrate their ability to identify the major artistic, literary, and technological contributions of individuals during the Renaissance by answering objective multiple choice questions.</p> |
| <a href="#">SS.912.W.5.3:</a> | Summarize the major ideas of Enlightenment philosophers.   | <p><b>World History B Unit 4: Absolutism, Enlightenment, and Revolution</b></p> <p>Video: <i>All About the Enlightenment - The Age of Reason</i><br/>The Enlightenment</p> <p>Through a video clip and a text-based lesson, students learn to summarize the major ideas of Enlightenment philosophers. The content examines the concepts of rationalism, empiricism, tolerance, skepticism, and deism; summarizes the beliefs and important written works of Thomas Hobbes, John Locke, Mary Wollstonecraft, Denis Diderot, Baron de Montesquieu, Voltaire, and Rousseau; and describes the influence of Enlightenment philosophy on the "enlightened despots" (Catherine the Great, Frederick II, and the Hapsburgs).</p>  | <p><b>World History B Unit 4: Absolutism, Enlightenment, and Revolution</b></p> <p>Unit Test: Absolutism, Enlightenment, and Revolution</p> <p>In this graded, summative assessment, students demonstrate their ability to summarize the major ideas of Enlightenment philosophers by answering objective multiple choice questions.</p>  |
| <a href="#">SS.912.W.6.3:</a> | Compare the philosophies of capitalism, socialism, and communism as described by Adam Smith, Robert Owen, and Karl Marx. | <p><b>World History B Unit 5: Industrialization</b></p> <p>New Economic Principles</p> <p>Through a text-based lesson and a multimedia activity, students learn to compare the philosophies of capitalism, socialism, and communism as described by Adam Smith, Robert Owen, and Karl Marx. In the multimedia activity, students sort characteristics of each economic system into the appropriate categories.</p>  | <p><b>World History B Unit 5: Industrialization</b></p> <p>Assignment: Analyzing Primary Sources</p> <p>In this graded, formative writing assignment, students compare the philosophies of capitalism, socialism, and communism as described by Adam Smith, Robert Owen, and Karl Marx. They analyze excerpts from primary sources by Smith and Marx (and related sources) concerning the issue of free trade.</p> <p>Unit Test: Industrialization</p> <p>In this graded, summative assessment, students demonstrate their ability to compare the philosophies of capitalism, socialism, and communism as described by Adam Smith, Robert Owen, and Karl Marx by answering objective multiple choice questions.</p>   |

| <p><a href="#">SS.912.G.4.9.</a></p> | <p>Use political maps to describe the change in boundaries and governments within continents over time.</p>                               | <p>Throughout World History A and B, students learn to use political maps to describe the change in boundaries and governments within continents over time.</p> <p>For example:</p> <p><b>World History B Unit 7: World War I</b><br/>World War I</p> <p>Through text-based lessons with both conventional and interactive maps, students learn to use political maps to describe the change in boundaries and governments within continents over time. In one interactive map activity, students move through progressively through the years 1914 to 1918, observing fluctuations in the battle lines over time. In another interactive map activity, students compare how the pre- and post-war borders of European nations were transformed by the outcome of the war and the conditions of the Paris Peace Accords.</p>  | <p>Throughout World History A and B, students complete graded, summative assessments by answering multiple choice questions about how political maps describe the change in boundaries and governments within continents over time.</p> <p>For example:</p> <p><b>World History B Unit 7: World War I</b><br/>Unit Test: World War I</p> <p>In a graded, summative assessment, students demonstrate their ability to use political maps to describe the change in boundaries and governments within continents over time by answering objective multiple choice questions.</p>   |
| <p><a href="#">SS.912.H.3.1.</a></p> | <p>Analyze the effects of transportation, trade, communication, science, and technology on the preservation and diffusion of culture.</p> | <p><b>World History A Unit 7: Empires of India and China</b><br/>China: The Han Dynasty<br/>Video: <i>The Silk Road</i></p> <p><b>World History A Unit 10: Pre-Colonial Africa</b><br/>Environmental Change, Trade, and Islam Transform Africa</p> <p>Through text-based lessons, maps, and a video clip, students learn to analyze the effects of transportation, trade, communication, science, and technology on the preservation and diffusion of culture. Students observe how the Silk Road drove cultural and economic exchange between Asia and Europe.</p>   | <p><b>World History A Unit 7: Empires of India and China</b><br/>Journal: Trade and Diffusion Along the Silk Road</p> <p>In a graded, formative writing product, students analyze the effects of transportation, trade, communication, science, and technology on the preservation and diffusion of culture along the Silk Road</p>  |
| <p><a href="#">SS.912.H.3.3.</a></p> | <p>Relate works in the arts to various cultures.</p>  | <p>Art, architecture, music, and literature are referenced throughout World History A and World History B. Examples are provided as support material throughout each course.</p> <p>Additionally, certain lessons focus on the arts.</p> <p>For example:</p> <p><b>World History A Unit 4: Ancient India, China, and Japan</b><br/>Ancient Japan</p> <p>Through a text-based lesson, students learn to relate Japan's Heian Period to achievement in music, literature and the arts. They read a plot summary of <i>The Tale of Genji</i>, and consider its significance as the world's first novel.</p> <p><b>World History A Unit 11: Medieval East Asia</b><br/>Feudal Japan</p> <p>Through a text-based lesson with a multimedia presentation, students learn to relate works in the arts to feudal Japanese culture. In the interactive multimedia presentation, students select from the categories of visual arts, literature, and the performing arts to learn about Ukiyo-e printing, Haiku poetry, and Noh Theater.</p> <p><b>World History B Unit 2: Renaissance and Reformation</b><br/>Renaissance Architecture</p> <p>Through a text-based lesson with architectural details, students learn to relate the work of Michelangelo to the culture of Renaissance Europe.</p> | <p>Throughout World History A and B, students complete assessments which require them to relate works in the arts to various cultures.</p> <p>For example:</p> <p><b>World History B Unit 2: Renaissance and Reformation</b><br/>Discussion: Masters of the Renaissance</p> <p>In a graded, formative discussion with their peers, students write a paragraph about a Renaissance artist of their choice. They discuss where the artist was born, where he worked, his training in the arts, and for whom he worked. They also discuss the medium (material used to make artworks) he primarily used (e.g., oil paint, marble, stone, prints). Students also consider how it compares to other works of art, and how the artist expresses ideas and themes that were important to people living in his time. Students are required to respond to at least two classmates' entries as part of the discussion.</p> |

|----------------------------------|--|--|--|--|
| <b>Course Title:</b>             | Comprehensive Fitness  |  |  |  |
| <b>Course Number:</b>            | 1501390  |  |  |  |
| <b>Course Abbreviated Title:</b> | COMPRES FIT  |  |  |  |
| <b>Course Path:</b>              | <b>Section:</b> Grades PreK to 12 Education Courses » <b>Grade Group:</b> Grades 9 to 12 and Adult Education Courses » <b>Subject:</b> Physical Education » <b>SubSubject:</b> Fitness » |  |  |  |
| <b>Course length:</b>            | Semester (S)   |  |  |  |
| <b>Status:</b>                   | State Board Approved   |  |  |  |

### STANDARDS (29)

| Standard ID                    | Standard Description   | Content          |  | Assessment    |   |
|--------------------------------|--|------------------|--|---------------|---|
|                                |  | RSID             | Unit and Lesson Name                                     | Assessment ID | Assessment Name                             |
| <a href="#">PE.912.C.1.15:</a> | Calculate individual target heart rate zone and analyze how to adjust intensity level to stay within the desired range.  | 323677           | PEIA Unit 1 Developing a Fitness Plan                    |               |   |
| <a href="#">PE.912.C.1.16:</a> | Explain the methods of monitoring levels of intensity during aerobic activity.   | 323677           | PEIA Unit 1 Developing a Fitness Plan                    |               |   |
| <a href="#">PE.912.C.1.23:</a> | Apply appropriate technology and analyze data to evaluate, monitor, and/or improve performance.  | 323672           | PEIA Unit 1 Fitness Pretest                              |               |   |
| <a href="#">PE.912.C.1.26:</a> | Evaluate skill patterns of self and/or partner by detecting and correcting mechanical errors.  | 323683           | PEIA Unit 1 Exercise and Safety Concerns                 |               |   |
| <a href="#">PE.912.C.1.28:</a> | Interpret and apply the rules associated with specific course activities.  | 323683           | PEIA Unit 1 Exercise and Safety Concerns                 |               |   |
| <a href="#">PE.912.L.1.1:</a>  | Participate in a variety of physical activities to meet the recommended number of minutes of moderate to vigorous physical activity (MVPA) beyond physical education on five or more days of the week. | 323677           | PEIA Unit 1 Developing a Fitness Plan                    |               | PEIA All Units Fitness Logs-only for 4 days |
| <a href="#">PE.912.L.1.2:</a>  | Participate in a variety of activities that promote cardiorespiratory fitness, muscular strength and endurance, flexibility, and body composition.   | 323672<br>323677 | PEIA Unit 1 Fitness Pretest<br>Developing a Fitness Plan |               | PEIA All Units Fitness Logs-only for 4 days |
| <a href="#">PE.912.L.1.3:</a>  | Participate in a variety of activities that promote effective stress management.   | 323725           | PEIA Unit 3 Mental Health Benefits of Fitness            |               |   |
| <a href="#">PE.912.L.2.1:</a>  | Demonstrate achievement and maintenance of a health-enhancing level of personal fitness by designing, implementing, self-assessing, and modifying a personal fitness program.                          |                  |  | 104161        | PEIA Unit 1 Fitness Plan Assignment         |

|                                |   |                            |  |                              |   |
|--------------------------------|---|----------------------------|--|------------------------------|---|
| <a href="#">PE.912.L.2.2:</a>  | Demonstrate program planning skills by setting goals, devising strategies, and making timelines for a personal fitness program.                           |                            |  | 104161                       | PEIA Unit 1 Fitness Plan Assignment             |
| <a href="#">PE.912.L.2.3:</a>  | Use a variety of resources including available technology to assess, design, and evaluate their personal physical activity plan.                          |                            |  | 104161                       | PEIA Unit 1 Fitness Plan Assignment             |
| <a href="#">PE.912.L.2.4:</a>  | Apply the principles of training and conditioning in accordance with personal goals.  |                            |  | 104161                       | PEIA Unit 1 Fitness Plan Assignment             |
| <a href="#">PE.912.L.2.7:</a>  | Evaluate how to make changes in an individual wellness plan as lifestyle changes occur.   |                            |  | 104169                       | PEIA Unit 2 Reevaluation of Progress Assignment |
| <a href="#">PE.912.M.1.5:</a>  | Apply strategies for self improvement based on individual strengths and needs.  |                            |  | 104169                       | PEIA Unit 2 Reevaluation of Progress Assignment |
| <a href="#">PE.912.M.1.12:</a> | Select and perform complex movements using a variety of equipment which lead to improved or maintained muscular strength and endurance.                   |                            |  | 104161                       | PEIA Unit 1 Fitness Plan Assignment             |
| <a href="#">PE.912.M.1.13:</a> | Perform a student designed cardiorespiratory enhancing workout.   |                            |  | 104155,<br>104159,<br>104160 | PEIA All Units Fitness Logs                     |
| <a href="#">PE.912.M.1.14:</a> | Utilize selected technology to assess, enhance, and maintain health and skill-related fitness levels.   |                            |  | 104169                       | PEIA Unit 2 Reevaluation of Progress Assignment |
| <a href="#">PE.912.M.1.15:</a> | Select and apply sports/activity specific warm-up and cool-down techniques.   | 323683                     | PEIA Unit 1 Exercise and Safety Concerns   |                              |   |
| <a href="#">PE.912.M.1.16:</a> | Apply the principles of training and conditioning to accommodate individual needs and strengths.  |                            |  | 104169                       | PEIA Unit 2 Reevaluation of Progress Assignment |
| <a href="#">PE.912.M.1.33:</a> | Practice complex motor activities in order to improve performance.  |                            |  |                              |   |
| <a href="#">PE.912.M.1.34:</a> | Demonstrate use of the mechanical principles as they apply to specific course activities.   |                            |  |                              |   |
| <a href="#">PE.912.M.1.35:</a> | Select proper equipment and apply all appropriate safety procedures necessary for participation.  | 323683                     | PEIA Unit 1 Exercise and Safety Concerns   |                              |   |
| <a href="#">PE.912.R.1.4:</a>  | Maintain appropriate personal, social, and ethical behavior while participating in a variety of physical activities.                                      | 323725<br>338907<br>338099 | PEIA Unit 3 Mental Health Benefits of Fitness<br>PEIA Unit 3 Physical Health Benefits of Fitness<br>PEIA Unit 3 Social Benefits of Fitness |                              |   |
| <a href="#">PE.912.R.1.5:</a>  | Demonstrate appropriate etiquette, care of equipment, respect for facilities, and safe behaviors while participating in a variety of physical activities. | 323683                     | PEIA Unit 1 Exercise and Safety Concerns   |                              |   |
| <a href="#">PE.912.R.2.3:</a>  | Explore the role of games, sports, and/or physical activities in other cultures.  |                            |  |                              |   |

### RELATED GLOSSARY TERM DEFINITIONS (14)

|                 |  |  |  |  |  |
|-----------------|--|--|--|--|--|
| <b>balance:</b> | A†skill-related component of fitness.† The ability to maintain equilibrium while moving or standing still. |  |  |  |  |
|-----------------|--|--|--|--|--|

|                               |   |  |  |  |  |
|-------------------------------|---|--|--|--|--|
| <b>body composition:</b>      | A health-related component of fitness.† The ratio of fat mass to lean mass in the body.   |  |  |  |  |
| <b>etiquette:</b>             | The forms and practices prescribed by social convention or by authority.  |  |  |  |  |
| <b>flexibility:</b>           | A health-related component of fitness.† The range of motion available at a given joint of the body.   |  |  |  |  |
| <b>mechanical principles:</b> | Principles dealing with the action of forces on objects (e.g., levers, balance, force).   |  |  |  |  |
| <b>muscular strength:</b>     | A health-related component of fitness.† The maximum force exerted when contracting muscles a single time.   |  |  |  |  |
| <b>MVPA :</b>                 | Moderate to vigorous physical activity.† It is sustained, repetitive, large-muscle activities (e.g., speed walking, running, cycling) performed at least at a medium level of intensity.  |  |  |  |  |
| <b>overload:</b>              | A training principle.† The body must be worked harder than normal in order to improve the fitness level.†   |  |  |  |  |
| <b>physical activity:</b>     | Any fitness, sports, or recreational activity involving movement of the body that is produced through muscle contraction that increases energy expenditure.   |  |  |  |  |
| <b>physical education:</b>    | A planned, sequential curriculum by which students learn to develop and maintain a healthy lifestyle.† It includes cognitive, affective, and psychomotor aspects of physical activity, goal setting, proper nutrition, and formal assessment. |  |  |  |  |
| <b>progression:</b>           | A training principle.† Starting an exercise program slowly and gradually increasing the intensity and duration in order to safely experience improvement.   |  |  |  |  |
| <b>specificity:</b>           | A training principle.† Improvements in personal fitness will occur in the particular muscles that you overload during physical activity or exercise.  |  |  |  |  |
| <b>strategies:</b>            | Competitive decisions by individuals and/or a team about the overall play of the game in order to gain advantage over the opponent; an overall plan of attack.  |  |  |  |  |
| <b>technology:</b>            | Human innovation in action that involves the generation of knowledge and processes to develop systems that solve problems and extend human capabilities (e.g., stop watches, pedometers, heart rate monitors, computers, digital cameras).    |  |  |  |  |

| VA.912.C.1.6   | Identify rationale for aesthetic choices in recording visual media.   |                           | 332013,<br>332014            | Where the standard (benchmark) is taught: Introduction to Drawing. Unit 2: Training Your Eye Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid<br>How the standard (benchmark) is taught: Through the use of text, images, and video, the student is given instruction on the grid method of drawing so that they can learn to develop visual information around them in a systematic way so that they can identify rationale for aesthetic choices in recording that visual media. | 111906            | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing. The student is asked to create a contour portrait using the grid method and one without the grid method. The student will then concentrate on detail, shading and proportion of the portrait as the drawing is developed. They are then asked to write their rationale for which of the two recorded images they chose to record and present in terms of choice of techniques, drawing tools and methods of use.  |                 |                  |  |
| Enduring Understanding 2: Assessing our own and others' artistic work, using critical-thinking, problem-solving, and decision-making skills, is central to artistic growth.                    |   |                           |                              |  |                   |  |                 |                  |  |
| VA.912.C.2.1   | Examine and revise artwork throughout the art-making process to refine work and achieve artistic objective. |                           | 332013,<br>332014,<br>332043 | Where the standard (benchmark) is taught: Introduction to Drawing. Unit 2: Training Your Eye; Unit 6 : Proportion Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid; Drawing the Human Face<br>How the standard (benchmark) is taught: Through the use of text, images, and video, the student is given instruction on the grid method of drawing in unit 2. In unit 6 they are given information about how to draw the human face using correct proportions.                       | 111906,<br>111196 | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing: The student is asked to create a contour portrait using the grid method and one without the grid method. The student will then concentrate on detail, shading and proportion of the portrait as the drawing is developed. They are then asked to write their rationale for which of the two recorded images they chose to record and present in terms of choice of techniques, drawing tools and methods of use. Unit 6 Project: Drawing a Finished Portrait. The student is asked to create a contour portrait using the grid method and one without the grid method. They are then asked to write about the process and defend the choice of one of them to present. They finish that in unit 6 when they have learned much more about proportion, facial features, and shading techniques. |                 |                  |  |

|  |  |  |        |  |        |   |  |  |  |
|--|--|--|--------|--|--------|---|--|--|--|
| VA.912.C.2.2   | Assess the works of others, using established or derived criteria, to support conclusions and judgments about artistic progress. |  | 322909 | Where the standard (benchmark) is taught: Fundamentals of Art Appreciation Unit 5: Exploring Art Lesson: Art Criticism<br>How the standard (benchmark) is taught: Through use of images and text, students are taught how to go through the critiquing process to support conclusions and judgments about artistic progress. | 103889 | How mastery of the standard (benchmark) is assessed: Unit 5 Paper: Art Criticism. The student will use the 4 step critiquing process to support conclusions and judgments about artistic progress in <i>The Ambassadors</i> , by Hans Holbein   |  |  |  |
| Enduring Understanding 3: The processes of critiquing works of art lead to development of critical-thinking skills transferable to other contexts.             |  |  |        |  |        |   |  |  |  |
| Big Idea: SKILLS, TECHNIQUES, AND PROCESSES  |  |  |        |  |        |   |  |  |  |
| Enduring Understanding 1: The arts are inherently experiential and actively engage learners in the processes of creating, interpreting, and responding to art. |  |  |        |  |        |   |  |  |  |
| VA.912.S.1.3   | Interpret and reflect on cultural and historical events to create art.   |  | 332019 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 3: Line and Shape Lesson: Shape<br>How the standard (benchmark) is taught: Through the use of images and video instruction, the student is taught about various shapes, artists, and the use of stained glass windows.                                | 111908 | How mastery of the standard (benchmark) is assessed: Unit 3 Project: Stained-glass Window Drawing. Through an understanding of the history of shapes and stained glass windows, the student creates their own stained glass window design by concentrating on a variety of geometric and organic shapes on drawing paper. The student will choose between formal and informal designs, concentrating on line and shape. Students should research images of stained glass designs online before beginning their design. The student will plan the design and then transfer the drawing to drawing paper. |  |  |  |

|  |   |  |                                |   |                        |  |  |  |  |  |
|--|---|--|--------------------------------|---|------------------------|--|--|--|--|--|
| VA.912.S.1.4   | Demonstrate effective and accurate use of art vocabulary throughout the art-making process.   |  | 332034, 332035, 322036, 332038 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 5: Perspective Lessons: Solving the Problem of Perspective; Perspective Made Easy; One-Point Perspective; Two-Point Perspective How the standard (benchmark) is taught: Through the use of text, images, and instructional videos, the student learns the vocabulary, history, and technical skills involved in perspective drawing.     | 111912, 111914, 111913 | How mastery of the standard (benchmark) is assessed: Unit 5 Activity: Drawing with One-Point Perspective; Unit 5 Project: Drawing with Two-Point Perspective; Unit 5 Required Chat: Discussing Perspective Drawing. The student is required to create a one-point and a two-point perspective drawing to show depth and perspective. Both demonstrate effective and accurate use of art vocabulary throughout the art-making process. Both of the drawings are to include detail to give it a sense of realism. The student is also required to chat with a teacher about the process in which the student will ask questions about the assignments, drawings and any concerns of the student. |  |  |  |  |
| VA.912.S.1.5   | Compare the aesthetic impact of images created with different media to evaluate advantages or disadvantages within the art process. |  | 332059, 332065                 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 9: Critiquing Your Work Lessons: Evaluating Art; You're the Critic Practice Activity How the standard (benchmark) is taught: Through text, images, and instructional videos, the student is taught how to compile, compare, and critique artworks that use various media to evaluate advantages or disadvantages within the art process. | 111921, 111922         | How mastery of the standard (benchmark) is assessed: Unit 9 Project: Portfolio; Unit 9 Required Chat: Portfolio Discussion. Students are asked to compile works of art produced throughout the drawing course and explain, through writing and discussion with a teacher, the aesthetic impact of images created with different media such as drawing, painting and graphics evaluating advantages or disadvantages within the art process. The student also has the opportunity to ask questions and discuss problems and solutions to their drawing techniques and use.  |  |  |  |  |
| Enduring Understanding 2: Development of skills, techniques, and processes in the arts strengthens our ability to remember, focus on, process, and sequence information. |   |  |                                |   |                        |  |  |  |  |  |

|   |   |  |                        |  |                |   |  |  |  |  |
|---|---|--|------------------------|--|----------------|---|--|--|--|--|
| VA.912.S.2.2  | Focus on visual information and processes to complete the artistic concept.   |  | 322055, 322057, 322058 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 8: Drawing Gestures and Action Lessons: What is Gesture and Action Drawing?; Gesture Drawing; Action Drawing How the standard (benchmark) is taught: Through the use of text, images, and instructional videos, the student is taught to focus on visual information and processes to complete the artistic concept.                                    | 111919, 111920 | How mastery of the standard (benchmark) is assessed: Unit 8 Activity: Gesture and Action Drawing; Unit 8 Project: Reworking Your Gesture Drawing. The student will focus on creating a series of action and gesture drawings using visual information and processes. They will then choose one of the gesture drawings and refine it using several art techniques including detail, shading and perspective.  |  |  |  |  |
| VA.912.S.2.5  | Demonstrate use of perceptual, observational, and compositional skills to produce representational, figurative, or abstract imagery.                |  | 332050                 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 7: Composition Lesson: Blocking and Creating Composition How the standard (benchmark) is taught: Through the use of instructional videos the student is taught the use of perceptual, observational, and compositional skills to produce a still life drawing.  | 111917, 111918 | How mastery of the standard (benchmark) is assessed: Unit 7 Project: Drawing a Still Life and Unit 7 Activity: Evaluating Your Still Life Drawing. The student uses perceptual, observational, and compositional skills to produce a still life drawing and evaluate it with various elements and principles of art including implied line, form, texture, value, space, contrast, emphasis and proportion while also providing specific examples from the student's work using art vocabulary. |  |  |  |  |
| VA.912.S.2.6  | Incorporate skills, concepts, and media to create images from ideation to resolution.   |  | 322055, 322057, 322058 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 8: Drawing Gestures and Action Lessons: What is Gesture and Action Drawing?; Gesture Drawing; Action Drawing How the standard (benchmark) is taught: Through the use of text, images, and instructional videos, the student is taught how to incorporate skills, concepts, and media to create action and gesture drawings from ideation to resolution. | 111919, 111920 | How mastery of the standard (benchmark) is assessed: Unit 8 Activity: Gesture and Action Drawing; Unit 8 Project: Reworking Your Gesture Drawing. The student will incorporate skills, concepts, and media to create quick action and gesture sketches. They will then choose one of the gesture drawings and refine it using several art techniques including detail, shading, value and perspective to make it more of a realistic and finished drawing.                                      |  |  |  |  |
| Enduring Understanding 3: Through purposeful practice, artists learn to manage, master, and refine simple, then complex, skills and techniques. |   |  |                        |  |                |   |  |  |  |  |
| VA.912.S.3.3  | Review, discuss, and demonstrate the proper applications and safety procedures for hazardous chemicals and equipment during the art-making process. |  |                        | Where the standard (benchmark) is taught: Unit: Lesson: How the standard (benchmark) is taught:  |                | How mastery of the standard (benchmark) is assessed: Unit:  |  |  |  |  |

|              |  |  |                   |  |        |   |  |  |  |
|--------------|--|--|-------------------|--|--------|---|--|--|--|
| VA.912.S.3.4 | Demonstrate personal responsibility, ethics, and integrity, including respect for intellectual property, when accessing information and creating works of art. |  | 332013,<br>332014 | Where the standard (benchmark) is taught:<br>Introduction to Drawing.<br>Unit 2: Training Your Eye<br>Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid<br>How the standard (benchmark) is taught:<br>Through the use of text, images, and instructional video, the student is taught the grid method of drawing.         | 111906 | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing.<br>The student is asked to create a contour portrait using the grid method and one without the grid method. The student will then concentrate on detail, shading and proportion of the portrait as the drawing is developed. They are then asked to write their rationale for which of the two recorded images they chose to record and present in terms of choice of techniques, drawing tools and methods of use. They are asked to Select a photograph of a portrait of a person that is focused on his or her face.<br>This can be from the internet or magazines. Before they turn in their contour portrait, they must accept a plagiarism statement that asks them to use their own work and cite any sources. They do this with every project, but it is particularly important here, because of the |  |  |  |
| VA.912.S.3.7 | Use and maintain tools and equipment to facilitate the creative process.   |  | 332006            | Where the standard (benchmark) is taught:<br>Introduction to Drawing<br>Unit 1 Introduction: Materials and Techniques<br>Lesson: Using Your Drawing Tools<br>How the standard (benchmark) is taught:<br>Through the use of an instructional video, students are taught to use and maintain tools and equipment to facilitate the creative process. | 113871 | How mastery of the standard (benchmark) is assessed: Unit 1 Activity: Making Marks Worksheet.<br>The student is asked to create several pencil techniques including hatching, cross-hatching and stippling while also using the information about how to use and maintain their drawing tools including pencils, pens and markers to facilitate the creative process.   |  |  |  |
| VA.912.S.3.8 | Develop color-mixing skills and techniques through application of the principles of heat properties and color and light theory.                                |  |                   | Where the standard (benchmark) is taught:<br>Unit:<br>Lesson:<br>How the standard (benchmark) is taught:   |        | How mastery of the standard (benchmark) is assessed: Unit:  |  |  |  |

The student will create quick action and gesture sketches to produce a complex and well crafted gesture drawing. The student will incorporate skills, concepts, and media to create quick action and gesture sketches. They will then choose one of the gesture drawings and refine it using several art techniques including detail, shading and perspective to make a finished and detailed drawing.            |  |  |  |  |
| Big Idea: ORGANIZATIONAL STRUCTURE   |  |  |   |   |                   |   |  |  |  |  |
| Enduring Understanding 1: Understanding the organizational structure of an art form provides a foundation for appreciation of artistic works and respect for the creative process. |  |  |   |   |                   |   |  |  |  |  |
| VA.912.O.1.1   | Use the structural elements of art and the organizational principles of design in works of art to establish an interpretive and technical foundation for visual coherence. |  | 332004,<br>332047,<br>332048,<br>332050 | Where the standard (benchmark) is taught:<br>Introduction to Drawing<br>Unit 1: Materials and Techniques; Unit 7: Composition<br>Lessons: The Artist's Vocabulary: Elements of Art; The Artist's Vocabulary: Principles of Art; Basic Drawing Instruction: Composition; Blocking and Creating Composition<br>How the standard (benchmark) is taught:<br>Through the use of text, images, and instructional videos the student is taught the elements and principles of design and how they are used to establish an interpretive and technical foundation for visual coherence in compositions. | 111917,<br>111918 | How mastery of the standard (benchmark) is assessed: Unit 7 Project: Drawing a Still Life and Unit 7 Activity: Evaluating Your Still Life Drawing. The student uses interpretive and technical skills that were acquired throughout the understanding of the elements and principles of art to produce a still life drawing and evaluate it with various elements and principles of art including implied line, form, texture, value, space, contrast, emphasis and proportion while also providing specific examples from the student's work using art vocabulary. |  |  |  |  |

|  |  |  |                        |  |                |   |  |  |  |  |
|--|--|--|------------------------|--|----------------|---|--|--|--|--|
| VA.912.O.1.2   | Use and defend the choice of creative and technical skills to produce artworks.  |  | 332013, 332014, 332043 | Where the standard (benchmark) is taught: Introduction to Drawing. Unit 2: Training Your Eye; Unit 6 : Proportion Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid; Drawing the Human Face<br>How the standard (benchmark) is taught: Through the use of text, images, and instructional video, the student is taught the grid method of drawing in unit 2. In unit 6 they are given information about how to draw the human face using correct proportions. | 111906, 111196 | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing: The student is asked to create a contour portrait using the grid method and one without the grid method. The student will then concentrate on detail, shading and proportion of the portrait as the drawing is developed. They are then asked to write their rationale for which of the two recorded images they chose to record and present in terms of choice of techniques, drawing tools and methods of use. They are asked to Select a photograph of a portrait of a person that is focused on his or her face. This can be from the internet or magazines. Before they turn in their contour portrait, they must accept a plagiarism statement that asks them to use their own work and cite any sources. Unit 6 Project: Drawing a Finished Portrait. The student is asked to create a contour portrait |  |  |  |  |
| Enduring Understanding 2: The structural rules and conventions of an art form serve as both a foundation and departure point for creativity. |  |  |                        |  |                |   |  |  |  |  |
| Enduring Understanding 3: Every art form uses its own unique language, verbal and non-verbal, to document and communicate with the world.    |  |  |                        |  |                |   |  |  |  |  |
| VA.912.O.3.1   | Create works of art that include symbolism, personal experiences, or philosophical view to communicate with an audience. |  | 332059, 332065         | Where the standard (benchmark) is taught: Introduction to Drawing Unit 9: Critiquing Your Work Lessons: Evaluating Art; You're the Critic Practice Activity<br>How the standard (benchmark) is taught: Through text, images, and instructional videos, the student is taught how to compile, compare, and critique artworks that that include symbolism, personal experiences, or philosophical view to communicate with an audience.  | 111921, 111922 | How mastery of the standard (benchmark) is assessed: Unit 9 Project: Portfolio; Unit 9 Required Chat: Portfolio Discussion. Students are asked to compile works of art produced throughout the drawing course as well as to create a final work that communicates symbolism, personal experiences, or philosophical view, as well as a mastery of techniques. They do a formal critique of this drawing and have a personal chat with a teacher about the symbolism, personal experiences, or philosophical view they were trying to communicate.   |  |  |  |  |

|   |  |  |                |  |                |   |  |  |  |  |
|---|--|--|----------------|--|----------------|---|--|--|--|--|
| VA.912.O.3.2  | Create a series of artworks to inform viewers about personal opinions and/or current issues.                     |  | 332059, 332065 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 9: Critiquing Your Work Lessons: Evaluating Art; You're the Critic Practice Activity<br>How the standard (benchmark) is taught: Through text, images, and instructional videos, the student is taught how to compile, compare, and critique artworks that inform viewers about personal opinions and/or current issues. | 111921, 111922 | How mastery of the standard (benchmark) is assessed: Unit 9 Project: Portfolio; Unit 9 Required Chat: Portfolio Discussion. Students are asked to compile works of art produced throughout the drawing course as well as to create a final work that shows personal opinions or point of view. They do a formal critique of this drawing and have a personal chat with a teacher about those personal opinions. Students are asked to compile works of art produced throughout the drawing course as well as to create a final work that communicates symbolism, personal experiences, or philosophical view, as well as a mastery of techniques. They do a formal critique of this drawing and have a personal chat with a teacher about the symbolism, personal experiences, or philosophical view they were trying to communicate. |  |  |  |  |
| Big Idea: HISTORICAL AND GLOBAL CONNECTIONS   |  |  |                |  |                |   |  |  |  |  |
| Enduring Understanding 1: Through study in the arts, we learn about and honor others and the worlds in which they live(d).  |  |  |                |  |                |   |  |  |  |  |
| VA.912.H.1.2  | Analyze the various functions of audience etiquette to formulate guidelines for conduct in different art venues. |  |                | Where the standard (benchmark) is taught: Unit: Lesson:<br>How the standard (benchmark) is taught:   |                | How mastery of the standard (benchmark) is assessed: Unit:  |  |  |  |  |
| Enduring Understanding 3: Connections among the arts and other disciplines strengthen learning and the ability to transfer knowledge and skills to and from other fields. |  |  |                |  |                |   |  |  |  |  |

|   |   |  |                                |   |                        |   |  |  |  |  |
|---|---|--|--------------------------------|---|------------------------|---|--|--|--|--|
| VA.912.H.3.2  | Apply the critical-thinking and problem-solving skills used in art to develop creative solutions for real-life issues.                  |  | 332034, 332035, 322036, 332038 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 5: Perspective Lessons: Solving the Problem of Perspective; Perspective Made Easy; One-Point Perspective; Two-Point Perspective How the standard (benchmark) is taught: Through the use of text, images, and instructional videos, the student learns the vocabulary, history, and technical skills involved in perspective drawing.   | 111912, 111914, 111913 | How mastery of the standard (benchmark) is assessed: Unit 5 Activity: Drawing with One-Point Perspective; Unit 5 Project: Drawing with Two-Point Perspective; Unit 5 Required Chat: Discussing Perspective Drawing. The student is required to create a one-point and a two-point perspective drawing. Both demonstrate critical-thinking and problem-solving skills used in art to develop creative solutions for real-life issues, such as interior design, with the one-point perspective room, and urban planning, with the two-point perspective street scene. The student is required to create a one-point and a two-point perspective drawing. Both of the drawings are to include detail to give it a sense of realism and will require the student to problem solve and use critical thinking skills to create a well planned out and designed drawing. |  |  |  |  |
| VA.912.H.3.3  | Use materials, ideas, and/or equipment related to other content areas to generate ideas and processes for the creation of works of art. |  | 332034, 332035, 322036, 332038 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 5: Perspective Lessons: Solving the Problem of Perspective; Perspective Made Easy; One-Point Perspective; Two-Point Perspective How the standard (benchmark) is taught: Through the use of text, images, and instructional videos, the student learns the vocabulary, history, and technical skills involved in perspective drawing. They learn that Filippo Brunelleschi, a Renaissance architect, is credited with discovering linear perspective and that it is used in math, science, and design fields. | 111912, 111914         | How mastery of the standard (benchmark) is assessed: Unit 5 Activity: Drawing with One-Point Perspective; Unit 5 Project: Drawing with Two-Point Perspective. The student is required to create a one-point and a two-point perspective drawing using the ideas first discovered by Renaissance architect Filippo Brunelleschi. Both drawings demonstrate materials, ideas, and/or equipment related to the math, science, and architecture fields. Both of the drawings are to include detail to give it a sense of realism and will require the student to research these content areas and apply them to the drawing.  |  |  |  |  |
| Big Idea: INNOVATION, TECHNOLOGY, AND THE FUTURE  |   |  |                                |   |                        |   |  |  |  |  |
| Enduring Understanding 1: Creating, interpreting, and responding in the arts stimulate the imagination and encourage innovation and creative risk-taking. |   |  |                                |   |                        |   |  |  |  |  |

|  |   |  |                        |   |                |  |  |  |  |  |
|--|---|--|------------------------|---|----------------|--|--|--|--|--|
| VA.912.F.1.3   | Demonstrate flexibility and adaptability throughout the innovation process to focus and re-focus on an idea, deliberately delaying closure to promote creative risk-taking. |  | 332013, 332014, 332043 | Where the standard (benchmark) is taught: Introduction to Drawing. Unit 2: Training Your Eye; Unit 6 : Proportion Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid; Drawing the Human Face How the standard (benchmark) is taught: Through the use of text, images, and instructional video, the student is taught the grid method of drawing as a method for creation of a contour portrait in unit 2. In unit 6 they are given information about how to draw the human face using correct proportions. In units 3-5, they learn shading and textural techniques that will also improve portrait drawing skills. | 111906, 111916 | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing; Unit 6 Project: Drawing a Finished Portrait. The student is asked to create one contour portrait using the flexibility and adaptability of free hand drawing. Then, they are asked to draw another contour portrait using the strict process of the grid method. The student is asked to create a contour portrait using the grid method and one without the grid method. The student will then concentrate on detail, shading and proportion of the portrait as the drawing is developed. They are then asked to write about the process to focus on the one they felt had a better outcome and to write their rationale for which of the two recorded images they chose to record and present in terms of choice of techniques, drawing tools and methods of use. They leave the contour to finish the portrait in unit |  |  |  |  |
| Enduring Understanding 2: Careers in and related to the arts significantly and positively impact local and global economies.   |   |  |                        |   |                |  |  |  |  |  |
| VA.912.F.2.1   | Examine career opportunities in the visual arts to determine requisite skills, qualifications, supply-and-demand, market location, and potential earnings.                  |  | 332067, 332068, 332069 | Where the standard (benchmark) is taught: Introduction to Drawing Unit 9: Critiquing Your Work Lessons: Careers for the 21st Century: Artists (Fine Arts); Careers for the 21st Century: Graphic Design Artists; Careers for the 21st Century: Designers. How the standard (benchmark) is taught: Through the use of instructional videos, the student is exposed to many career opportunities in the visual arts. They are told the requisite skills, qualifications, supply-and-demand, market location, and potential earnings for those fields.   | 111921, 111922 | How mastery of the standard (benchmark) is assessed: Unit 9 Project: Portfolio; Unit 9 Required Chat: Portfolio Discussion. As part of their portfolio, students are asked to write about two of the careers they studied and explain why they may or may not want to pursue an art career. They will also have a portfolio chat with a teacher where they may need to clarify some of those thoughts. Students are asked to compile works of art produced throughout the drawing course as well as to create a final work that communicates symbolism, personal experiences, or philosophical view, as well as a mastery of techniques. They do a formal critique of this drawing and have a personal chat with a teacher about the symbolism, personal experiences, or philosophical view they were trying to communicate.   |  |  |  |  |
| VA.912.F.2.3   | Analyze the potential economic impact of arts entities to revitalize a community or region.   |  |                        | Where the standard (benchmark) is taught: Unit: Lesson: How the standard (benchmark) is taught:   |                | How mastery of the standard (benchmark) is assessed: Unit:   |  |  |  |  |
| Enduring Understanding 3: The 21st-century skills necessary for success as citizens, workers, and leaders in a global economy are embedded in the study of the arts. |   |  |                        |   |                |  |  |  |  |  |

|              |  |  |                        |   |                |  |  |  |  |
|--------------|--|--|------------------------|---|----------------|--|--|--|--|
| VA.912.F.3.4 | Follow directions and use effective time-management skills to complete the art-making process and show development of 21st-century skills. |  | 332013, 332014, 332043 | Where the standard (benchmark) is taught: Introduction to Drawing. Unit 2: Training Your Eye; Unit 6 : Proportion Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid; Drawing the Human Face<br>How the standard (benchmark) is taught: Through the use of text, images, and instructional video, the student is taught the grid method of drawing as a method for creation of a contour portrait in unit 2. In unit 6 they are given information about how to draw the human face using correct proportions. In units 3-5, they learn shading and tonal techniques that will also improve portrait drawing skills. | 111906, 111196 | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing: The student is asked to create a contour portrait using the grid method and one without the grid method. The student will then concentrate on detail, shading and proportion of the portrait as the drawing is developed. They are then asked to write their rationale for which of the two recorded images they chose to record and present in terms of choice of techniques, drawing tools and methods of use. Unit 6 Project: Drawing a Finished Portrait. The student is asked to create one contour portrait using the flexibility and adaptability of free hand drawing. Then, they are asked to draw another contour portrait using the strict process of the grid method. They must follow directions closely. It should only be a contour. They finish the portrait in unit 6, after they have learned much more |  |  |  |
| VA.912.F.3.5 | Use appropriately cited sources to document research and present information on visual culture.  |  | 322867                 | Where the standard (benchmark) is taught: Fundamentals of Art Appreciation Unit 4: Why is Art Created? Lesson: Religion and Art<br>How the standard (benchmark) is taught: Using text and images, the student will learn to analyze and compare iconic, aniconic, and iconoclastic artworks in a variety of cultures and times. They will be informed how to use appropriately cited sources to document research and present information on religious art  | 322888         | How mastery of the standard (benchmark) is assessed: Unit 4 Paper: Religion's Influence on Art. The student will write a paper analyzing iconic, aniconic, and iconoclastic artworks from a variety of cultures and times. They will be asked to use appropriately cited sources to document research and present information on the visual culture of religious art.  |  |  |  |

|                 |  |  |                |  |        |   |  |  |  |
|-----------------|--|--|----------------|--|--------|---|--|--|--|
| VA.912.F.3.6    | Identify ethical ways to use appropriation in personal works of art.   |  | 332013, 332014 | Where the standard (benchmark) is taught: Introduction to Drawing. Unit 2: Training Your Eye Lessons: Basic Drawing Instruction: The Grid and Proportions; Using a Grid<br>How the standard (benchmark) is taught: Through the use of text, images, and instructional video, the student is taught the grid method of drawing. | 111906 | How mastery of the standard (benchmark) is assessed: Unit 2 Project: Portrait Contour Drawing. Students are asked to select a photograph of a portrait of a person that is focused on his or her face. This can be from the internet or magazines. Before they turn in their contour portrait, they must accept a plagiarism statement that asks them to use their own work and cite any sources. They do this with every project, but it is particularly important here, because of the photo they will use. Students will then draw the portrait by concentrating on proportion, shading and detail with concentration on value, shading, depth and perspective. Attention to detail is vital on this assignment as the portrait should be drawn from the photograph. |  |  |  |
| LACC.910.SL.1.1 | Comprehension and Collaboration  |  |                |  |        |   |  |  |  |
| LACC.910.SL.1.1 | Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9-10 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively. |  |                |  | 107791 | How mastery of the standard (benchmark) is assessed: Introduction to Drawing Unit 1: Discussion Unit 3: Discussion Unit 7: Discussion Unit 9: Discussion Unit 9: Required Chat: Portfolio Discussion. This standard is assessed through a series of classroom discussions. Students will answer the discussion questions and post them to the discussion panel in which to communicate with their teacher and other classmates to provide background information about their experience with drawing. Students will build on other's comments and ideas while expressing their own opinion and thoughts.  |  |  |  |

|--------------------------------------|--|--|---|--|---|---|
| VA.912.S.1.3:                        | Interpret and reflect on cultural and historical events to create art.   | 322867<br>322873   | Fundamentals of Art Appreciation<br>Unit 4: Lesson: Religion and Art<br>Unit 4: Lesson: Other Motivating Factors<br>How the standard (benchmark) is taught: This standard will be assessed using direct instruction and digital examples of art and its impact on historical events in certain cultures | 103874   | Fundamentals of Art Appreciation<br>Unit 5: Test: Why is Art Created<br>How mastery of the standard (benchmark) is assessed: This standard is assessed using multiple choice and true false questions covering the process of describing, analyzing, interpreting and judging. This test also covers the careers in the visual arts profession including aesthetic views of art, perception of artwork and personal preferences, the evaluation of artwork, and identify art specific vocabulary. |   |
| <b>Domain: English Language Arts</b> |  |  |   |  |   |   |
| LACC.910.RST.2.4:                    | Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 9–10 texts and topics.  | a. Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas. | 322894<br>322902<br>322909  | Fundamentals of Art Appreciation<br>Unit 5: Exploring Art Introduction<br>Unit 5: Lesson Aesthetics<br>Unit 5: Lesson Art Criticism<br>How the standard (benchmark) is taught: This standard is taught by direct instruction. Students will be presented with art domain specific vocabulary words and examples of paintings to compare, describe and analyze artwork. | 103889<br>103893  | Fundamentals of Art Appreciation<br>Unit 5: Paper: Art Criticism<br>How mastery of the standard (benchmark) is assessed: This standard will be assessed using a graded writing product with rubric feedback from a teacher, the student will study and evaluate a painting using the four-step approach of art criticism and will use appropriate domain specific vocabulary in their evaluation. The student will use the four step critiquing process of describing, analyzing, interpreting and judging in order to analyze how content and ideas are used in The Ambassadors, by Hans Holbein. The student is to review the aesthetics and art criticism lessons to reinforce their comprehension of aesthetics and the process of art criticism. The student will study the painting and take notes as they progress through each of the four steps of art criticism and will answer questions including whether the artwork is objective or non-objective; will describe the painting to determine the subject and identify what objects are included; will analyze the painting to consider how the artist uses the elements and principles of art; will interpret the painting to be able to consider what ideas, moods, and/or feelings are evoked by the painting; to judge whether the work is aesthetically pleasing; determine whether or not the artwork is successful; to point out unusual or interesting points about the artwork and to give an overall impression of the artwork in a critical essay. The student can compare it to an art |
| LACC.910.SL.1.1:                     | Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9–10 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively. | b. Work with peers to set rules for collegial discussions and decision-making (e.g., informal consensus, taking votes on key issues, presentation of alternate views), clear goals and deadlines, and individual roles as needed.                              |   | Fundamentals of Art Appreciation<br>Unit 5: Discussion: Art Careers Instructions<br>How the standard (benchmark) is taught: This lesson provides instructions for participating in a class discussion about art careers.   | New   | Fundamentals of Art Appreciation<br>Unit 5: Discussion: Art Careers<br>How mastery of the standard (benchmark) is assessed: Students will be assessed in a class discussion thread. They will talk about which art career they might pursue and respond to other members of the class. This discussion will be monitored by a teacher. The student is able to view others comments and reply and add information to the discussion.   |

|                    |  |   |                  |   |                            |  |
|--------------------|--|---|------------------|---|----------------------------|--|
|                    |  | c. Propel conversations by posing and responding to questions that relate the current discussion to broader themes or larger ideas; actively incorporate others into the discussion; and clarify, verify, or challenge ideas and conclusions. |                  |   |                            |  |
|                    |  | d. Respond  |                  |   |                            |  |
| LACC.910.WHST.2.4: | Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. |   | 322867<br>322873 | Fundamentals of Art History<br>Unit 4: Lesson: Religion and Art<br>Unit 4: Lesson: Other Motivating Factors<br>How the standard (benchmark) is taught: This standard is taught using direct instruction and digital examples of art and its impact on historical events in certain cultures | 103873<br>103889<br>103915 | Fundamentals of Art Appreciation<br>Unit 4: Paper: Religion's Influence on Art<br>How mastery of the standard (benchmark) is assessed: This standard will be assessed using a graded writing product with rubric feedback from a teacher. The student will write a paper about how religion has influenced art historically and trace the influence of religion on the production of art throughout history in different cultures. This paper should also describe how religion has influenced art historically and trace the influence of religion on the production of art throughout history and in different cultures. The student should also include the terms iconic, aniconic, and iconoclastic and identify the religious structures associated with each faith while also describing how religions used each type of art and may include Christianity, Buddhism, Islam, Judaism and Hinduism.<br>Unit 5: Paper: Art Criticism<br>How mastery of the standard (benchmark) is assessed: This standard will be assessed using a graded writing product with rubric feedback from a teacher. The student will study a painting and evaluate it using the four-step approach of art criticism. Their responses will include descriptive terms regarding aesthetics. The student will use the four-step critiquing process of describing, analyzing, interpreting and judging in order to analyze how content and ideas are used in The Ambassadors, by Hans Holbein. | PE.914.4.4  | Propose strategies to reduce or prevent injuries and health problems.  | <b>Physical Education 1A</b><br>Unit 2: Lesson: Proper Exercise Technique<br>Where the standard (benchmark) is taught: This lesson provides direct instruction on exercise safety concerns and how to use proper form when exercising.   | <b>Physical Education 1A</b><br>Unit 2: Safety in Exercise Test<br>How mastery of the standard (benchmark) is assessed: In a graded formative assessment, students will identify the proper form for performing exercises to help prevent injuries.<br><b>Physical Education 1A Midterm Exam</b><br>This standard is assessed using multiple choice and true/false questions related to safety in exercise.  |
| PE.914.5.5  | Evaluate the effect of media on personal and family health.  |  |  |
| PE.914.7.1  | Demonstrate a variety of healthy practices and behaviors that will maintain or improve health.                     | <b>Physical Education 1A</b><br>Where the standard (benchmark) is taught:<br>Unit 1: Lesson: Fitness Log 1 Instructions<br>Unit 1: Lesson: Fitness Log 2 Instructions<br>Unit 1: Lesson: Fitness Log 3 Instructions<br>Unit 2: Lesson: Fitness Log 4 Instructions<br>Unit 2: Lesson: Fitness Log 5 Instructions<br>Unit 2: Lesson: Fitness Log 6 Instructions<br>Unit 3: Lesson: Fitness Log 7 Instructions<br>Unit 3: Lesson: Fitness Log 8 Instructions<br>Unit 3: Lesson: Fitness Log 9 Instructions<br>Unit 4: Lesson: Fitness Log 10 Instructions<br>Unit 4: Lesson: Fitness Log 11 Instructions<br>Unit 4: Lesson: Fitness Log 12 Instructions<br>These lessons provide direct instruction for completing weekly fitness logs to record cardio, flexibility and strength training exercises.<br>Unit 3: Lesson: Being Physically Fit<br>This lesson provides a multimedia presentation on what it means to be physically fit by introducing students to guidelines for the intensity and duration of exercise and the benefits of aerobic and strength training. | <b>Physical Education 1A</b><br>Unit 1: Fitness Log 1<br>Unit 1: Fitness Log 2<br>Unit 1: Fitness Log 3<br>Unit 2: Fitness Log 4<br>Unit 2: Fitness Log 5<br>Unit 2: Fitness Log 6<br>Unit 3: Fitness Log 7<br>Unit 3: Fitness Log 8<br>Unit 3: Fitness Log 9<br>Unit 4: Fitness Log 10<br>Unit 4: Fitness Log 11<br>Unit 4: Fitness Log 12<br>How will this standard be measured: To assess this standard, students will complete a written fitness log that provides details about their weekly exercise requirements for aerobic exercise, stretching and strength training. The completed logs will sent to a teacher for grading. |
| PE.914.9.1  | Critique a variety of behaviors that avoid or reduce health risks.   | <b>Physical Education 1A</b><br>Unit 2: Lesson: Exercise and Safety Concerns<br>Where the standard (benchmark) is taught: This lesson provides instructions for completing a discussion assignment about reducing health risks by following safety guidelines for driving.   | <b>Physical Education 1A</b><br>Unit 2: Exercise and Safety Concerns Test<br>How mastery of the standard (benchmark) is assessed: In a graded, formative assessment, students will answer multiple choice and true/false questions to identify proper exercise techniques, the effects of weather on exercise and how to recover from exercise.  |
| PE.917.4.1  | Calculate individual target heart rate and analyze how to adjust intensity level to stay within the desired range. | <b>Physical Education 1A</b><br>Unit 1: Developing Your Fitness Plan Presentation<br><b>Physical Education 1B</b><br>Unit 1: Developing Your Fitness Plan Presentation<br>Where the standard (benchmark) is taught: These lessons present information in a multimedia presentation to provide direct instruction for calculating a target heart rate before, during and after exercise.  | <b>Physical Education 1A</b><br>Unit 1: Fitness Plan Test<br>How mastery of the standard (benchmark) is assessed: In a graded, formative assessment, students will answer multiple choice and true/false questions about the proper procedures for finding a target heart rate.<br><b>Physical Education 1B</b><br>Unit 1: Fitness Plan Assignment<br>This standard is assessed by multiple choice and true/false questions. Students will identify the correct procedures for finding a target heart rate.  |
| PE.917.4.1b | Explain the methods of monitoring levels of intensity during aerobic activity.                                     | <b>Physical Education 1A</b><br>Unit 3: Lesson: Being Physically Fit Presentation<br>Where the standard (benchmark) is taught: This lesson uses direct instruction presented in a multimedia format to explain how to monitor activity levels during aerobic exercise.   | <b>Physical Education 1A</b><br>Unit 3: Overview of Health and Fitness Test<br>How mastery of the standard (benchmark) is assessed: In a graded, formative assessment, students will answer multiple choice and true/false questions to identify ways of gauging intensity during aerobic exercise, make selections based on exercise scenarios, and identify guidelines for monitoring physical activity.   |
| PE.917.4.1c | Assess physiological effects of exercise during and after physical activity.                                       | <b>Physical Education 1A</b><br>Unit 3: Lesson: Being Physically Fit Presentation<br>Where the standard (benchmark) is taught: This lesson uses direct instruction presented in a multimedia format to explain how to monitor activity levels during aerobic exercise.   | <b>Physical Education 1A</b><br>Unit 3: Overview of Health and Fitness Test<br>How mastery of the standard (benchmark) is assessed: In a graded, formative assessment, students will answer multiple choice and true/false questions about gauging intensity during aerobic exercise, make selections based on exercise scenarios, and identify guidelines for monitoring the physiological effects of exercise.   |

| Alignment of Advanced Academics [Course Name] to [Standards Set] |  | 7/30/2013  |
|--|--|--|
| PE.912.C.1.B   | Differentiate between fact and fallacy as it relates to consumer physical fitness products and programs.   | <p><b>Physical Education 1A</b><br/>Unit 2: Persuasive Letter Instructions: Purchasing Exercise Equipment<br/>How the standard (benchmark) is taught: This lesson provides instructions for writing a persuasive letter recommending the purchase of a specific type of exercise equipment.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Paper: Persuasive Letter-Exercise Equipment<br/>How mastery of the standard (benchmark) is assessed: This standard will be assessed using a graded writing product with rubric feedback from a teacher. Students will research primary and secondary media sources to answer specific questions to prepare an argument about why their school should purchase a specific type of exercise equipment.</p>   |
| PE.912.C.1.Z   | Explain the skill related components of balance, reaction time, agility, coordination, power, and speed and how they enhance performance levels.   | <p><b>Physical Education 1A</b><br/>Unit 2: Lesson: Being Physically Fit Presentation<br/>This lesson uses direct instruction presented in a multimedia format to explain how to monitor activity levels during aerobic exercise.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Overview of Health and Fitness Test<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed using multiple choice and true/false questions. Students will identify ways of gauging intensity during aerobic exercise, make selections based on exercise scenarios, and identify guidelines for monitoring the physiological effects of exercise.</p>  |
| PE.912.C.2.A   | Apply appropriate technology and analyze data to evaluate, monitor, and/or improve performance.  | <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment Instructions<br/>Where the standard (benchmark) is taught: This lesson provides direct instruction for retaking the fitness pretest again and completing the fitness plan assignment, researching technology resources on the Internet and using online tools to design a program.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed through a written paper. Students will retake the fitness pretest, record changes to their scores, modify the plan based on the scores and submit the paper for grading.</p>   |
| PE.912.L.1   | Participate in a variety of physical activities to meet the recommended number of minutes of moderate to vigorous physical activity (MVPA) beyond physical education on five or more days of the week. | can change fitness logs to 5 days a week but that is a lot of editing for all of the logs in 1A  |
| PE.912.L.1   | Demonstrate achievement and maintenance of a health enhancing level of personal fitness by designing, implementing, self-assessing, and modifying a personal fitness program.                          | <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment Instructions<br/>Where the standard (benchmark) is taught: This lesson provides direct instruction for retaking the fitness pretest and completing the fitness plan assignment.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed through a written paper. Students will retake the fitness pretest, record changes to their scores, modify the plan based on the scores and submit the paper for grading.</p>  |
| PE.912.L.2   | Participate in a variety of activities that promote cardio respiratory fitness, muscular strength and endurance, flexibility, and body composition.  | <p><b>Physical Education 1A</b><br/>Where the standard (benchmark) is taught:<br/>Unit 1: Lesson: Fitness Log 1 Instructions<br/>Unit 1: Lesson: Fitness Log 2 Instructions<br/>Unit 1: Lesson: Fitness Log 3 Instructions<br/>Unit 2: Lesson: Fitness Log 4 Instructions<br/>Unit 2: Lesson: Fitness Log 5 Instructions<br/>Unit 2: Lesson: Fitness Log 6 Instructions<br/>Unit 2: Lesson: Fitness Log 7 Instructions<br/>Unit 3: Lesson: Fitness Log 8 Instructions<br/>Unit 3: Lesson: Fitness Log 9 Instructions<br/>Unit 4: Lesson: Fitness Log 10 Instructions<br/>Unit 4: Lesson: Fitness Log 11 Instructions<br/>Unit 4: Lesson: Fitness Log 12 Instructions<br/>These lessons provide direct instruction for completing weekly fitness logs for each unit. Students are provided instructions for completing a fitness log which includes, aerobic exercise, strength training and flexibility exercises.</p> <p><b>Physical Education 1A</b><br/>Unit 1: Fitness Log 1<br/>Unit 1: Fitness Log 2<br/>Unit 1: Fitness Log 3<br/>Unit 2: Fitness Log 4<br/>Unit 2: Fitness Log 5<br/>Unit 2: Fitness Log 6<br/>Unit 2: Fitness Log 7<br/>Unit 3: Fitness Log 8<br/>Unit 3: Fitness Log 9<br/>Unit 4: Fitness Log 10<br/>Unit 4: Fitness Log 11<br/>Unit 4: Fitness Log 12<br/>How mastery of the standard (benchmark) is assessed: To assess this standard, students will complete a written fitness log that provide details about their weekly exercise requirements for aerobic exercise, stretching and strength training. The completed logs will sent to a teacher for grading.</p>  |
| PE.912.L.2   | Demonstrate program planning skills, by setting goals, devising strategies, and making timelines for a personal fitness program.   | <p><b>Physical Education 1A</b><br/>Unit 1: Fitness Pretest<br/>Where the standard (benchmark) is taught: This lesson is taught using a multimedia presentation. Students will watch the presentation and be given instructions for performing the exercises on the pretest.<br/>Unit 1: Lesson: Developing a Fitness Plan<br/>This lesson is taught using a multimedia presentation. Students will watch the presentation and review their fitness pretest results.<br/>Unit 1: Exercise and Safety Concerns<br/>This lesson provides direct instruction on exercise safety concerns.<br/>Unit 1: Lesson: Exercise and Safety Concerns<br/>This lesson provides direct instruction on guidelines for performing exercises using proper form.<br/>Unit 1: Lesson: Warming Up and Cooling Down<br/>This lesson uses a multimedia presentation to provide instruction on the proper techniques for warming up and cooling down.<br/>Unit 1: Lesson: Fitness Pretest<br/>This lesson is taught using a multimedia presentation. Students will watch the presentation and be given instructions for performing the exercises on the pretest.<br/>Unit 1: Lesson: Spectrum of Exercise<br/>This lesson provides direct instruction on how your body performs during exercise.<br/>Unit 1: Lesson: Developing a Fitness Plan<br/>This lesson is taught using a multimedia presentation. Students will watch the presentation and review their fitness pretest results.<br/>Unit 2: Lesson: Fitness Plan Assignment Instructions<br/>This lesson provides direct instruction on how to critically assess the fitness pretest results and how to complete the fitness plan assignment.</p> <p><b>Physical Education 1A</b><br/>Unit 1: Fitness Plan Assignment<br/>How mastery of the standard (benchmark) is assessed: Students will complete a fitness pretest and critically assess their results. After reviewing their results, they will create a fitness plan to evaluate their result and set short term and long term goals. Their log will be submitted to their teacher for grading.<br/>Physical Education 1A Midterm Exam<br/>Students are assessed through a formative assessment with multiple choice and true/false questions.</p> |

| PE.912.L.3   | Participate in a variety of activities that promote effective stress management.   | <p><b>Physical Education 1A</b><br/>Unit 3: Mental Health Benefits of Fitness</p> <p><b>Physical Education 1A</b><br/>All Fitness Logs<br/>Students will complete aerobic, stretching and strength training each week to release stress. The written logs will be submitted to a teacher for grading.</p>  |
| PE.912.L.3   | Use a variety of resources including available technology to assess, design, and evaluate their personal physical activity plan.                                       | <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment Instructions<br/>Where the standard (benchmark) is taught: This lesson provides direct instruction for retaking the fitness pretest again and completing the fitness plan assignment, researching technology resources on the Internet and using online tools to design a program.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed through a written paper. Students will retake the fitness pretest, record changes to their scores, modify the plan based on the scores and submit the paper for grading.</p>   |
| PE.912.L.4   | Apply the principles of training and conditioning in accordance with personal goals.   | <p><b>Physical Education 1A</b><br/>Unit 1: Lesson: Fitness Plan Assignment Instructions<br/>Unit 1: Lesson: Developing a Fitness Plan<br/>Where the standard (benchmark) is taught: These lessons are taught using a multimedia presentation. Students will watch the presentation and be given instructions for performing the exercises on the pretest and learn about the guidelines for setting personal goals for their fitness plan.</p> <p><b>Physical Education 1A</b><br/>Unit 1: Fitness Plan Assignment<br/>How mastery of the standard (benchmark) is assessed: Students will complete a fitness pretest and critically assess their results. After reviewing their results, they will create a fitness plan to evaluate their result and set short term and long term goals.<br/>Physical Education 1A Midterm Exam<br/>This standard is assessed using multiple choice and true/false questions. Students will answer questions about how to develop a fitness plan.<br/>Physical Education 1B<br/>Same as 1A</p> |
| PE.912.L.5   | Assess and evaluate the use of a variety of physical activities in developing a personal fitness program.  | <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment Instructions<br/>Where the standard (benchmark) is taught: This lesson provides direct instruction for retaking the fitness pretest again and completing the fitness plan assignment.</p> <p><b>Physical Education 1A</b><br/>How mastery of the standard (benchmark) is assessed: This standard is assessed by a written assignment. Students will retake the fitness pretest, reevaluate their strengths and weaknesses and adapt their fitness plan based on the results. They will submit their paper to a teacher for a grade.</p>  |
| PE.912.L.6   | Utilize knowledge of the risks and safety factors that may affect physical activity throughout life.   | <p><b>Physical Education 1A</b><br/>Unit 2: Introduction: Safety in Exercise<br/>Unit 2: Lesson: Proper Exercise Technique<br/>Where the standard (benchmark) is taught: These lessons provide direct instruction on guidelines for performing exercises using proper form.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Safety in Exercise Test<br/>Physical Education 1A Midterm Exam<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed using multiple choice and true/false questions related to safety in exercise.</p>  |
| PE.912.L.6   | Analyze health-related problems associated with inadequate levels of cardio respiratory endurance, muscular strength and endurance, flexibility, and body composition. | <p><b>Physical Education 1A</b><br/>Unit 3: Lesson: Being Physically Fit<br/>Where the standard (benchmark) is taught: This lesson uses a multimedia presentation to provide an overview of what it means to be physically fit.</p> <p><b>Physical Education 1A</b><br/>Unit 3: Overview of Health and Fitness Test<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed using multiple choice and true/false questions. Students will analyze health scenarios to identify potential health related problems.</p>   |
| PE.912.L.7   | Evaluate how to make changes in an individual wellness plan as lifestyle changes occur.  | <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment Instructions<br/>Where the standard (benchmark) is taught: This lesson provides direct instruction for retaking the fitness pretest again and completing the fitness plan assignment.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed through a written paper. Students will retake the fitness pretest, record changes to their scores, modify the plan based on the scores and submit the paper for grading.</p>  |
| PE.912.L.8   | Apply strategies for self improvement based on individual strengths and needs.   | <p><b>Physical Education 1A</b><br/>Unit 2: Lesson: Reevaluation of Progress Instructions<br/>Where the standard (benchmark) is taught: This lesson uses direct instruction to teach students how to re-evaluate their fitness progress by retaking the fitness test and setting goals for a fitness program.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Reevaluation of Progress Assignment<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed by a written assignment. Students will retake the fitness pretest, reevaluate their strengths and weaknesses and adapt their fitness plan based on the results. They will submit the paper to a teacher for grading.</p>  |
| PE.912.L.9   | Select and perform complex movements using a variety of equipment which lead to improved maintained muscular strength and endurance.                                   | <p><b>Physical Education 1A</b><br/>Unit 2: Lesson: Proper Exercise Technique Presentation<br/>Where the standard (benchmark) is taught: This lesson provides direct instruction on guidelines for performing exercises using proper form.</p> <p><b>Physical Education 1A</b><br/>Unit 2: Safety in Exercise Test<br/>Physical Education 1A Midterm Exam<br/>How mastery of the standard (benchmark) is assessed: This standard is assessed using multiple choice and true/false questions related to safety in exercise.</p>   |

| Alignment of Advanced Academics [Course Name] to [Standards Set] |  | 7/30/2013   |
|--|--|---|
| PE.912.M.1.11  | Perform a student designed cardio respiratory enhancing workout.   | Physical Education 1A<br>Units 1-3 Fitness Log Instructions<br>Where the standard (benchmark) is taught: These lessons use direct instruction to provide guidelines for completing weekly fitness logs that include cardio exercise, strength training and flexibility exercises  |
| PE.912.M.1.14  | Utilize selected technology to assess, enhance, and maintain health and skill-related fitness levels.  | Physical Education 1A<br>Unit 2: Reevaluation of Progress Assignment Instructions<br>Where the standard (benchmark) is taught: This lesson provides direct instruction for retaking the fitness pretest again and completing the fitness plan assignment, researching technology resources on the Internet and using online tools to design a program.        |
| PE.912.M.1.15  | Select and apply sports/activity specific warm-up and cool-down techniques.  | Physical Education 1A<br>Unit 3: Lesson: Recovering from Exercise   |
| PE.912.M.1.16  | Use correct body alignment, strength, flexibility, and coordination in the performance of technical movements.   | Physical Education 1A<br>Unit 1: Exercise and Safety Concerns<br>Where the standard (benchmark) is taught: This lesson uses direct instruction to demonstrate how to perform exercises safely in the proper form  |
| PE.912.M.1.17  | Demonstrate use of the mechanical principles as they apply to specific course activities.  |   |
| PE.912.M.1.18  | Select proper equipment and apply all appropriate safety procedures necessary for participation.   | Physical Education 1A<br>Unit 1: Exercise and Safety Concerns<br>Where the standard (benchmark) is taught: This lesson provides direct instruction on guidelines for performing exercises using proper form   |
| PE.912.P.1.1   | Select and participate in a variety of physical activities outside of the school setting that contribute to personal enjoyment and the attainment or maintenance of a healthy lifestyle. | Physical Education 1A<br>Unit 4: Introduction: Fitness in the Community<br>Unit 4: Lesson: Fitness Resources<br>Unit 4: Lesson: Fitness Careers<br>Where the standard (benchmark) is taught: These lessons teach students using direct instruction to show examples of how students can locate community resources and find information about fitness careers |
| PE.912.P.1.2   | Develop strategies for including persons of diverse backgrounds and abilities while participating in a variety of physical activities.   |   |
| PE.912.P.1.3   | Discuss physical activities from which benefits can be derived.  | Physical Education 1A<br>Unit 3: Lesson: Physical Benefits of Fitness<br>Where the standard (benchmark) is taught: This lesson uses direct instruction and examples to show students about the benefits of plyometrics, gymnastics, balance and coordination  |
| PE.912.P.1.4   | Demonstrate responsible behaviors during physical activities.  | Physical Education 1A<br>Unit 2: Exercise and Safety Concerns<br>Where the standard (benchmark) is taught: This lesson provides awareness during activity and how to properly use equipment.  |
| PE.912.P.1.5   | Explore the role of games, sports, and/or physical activities in other cultures.   | Physical Education 1A<br>Unit 3: Lesson: Physical Benefits of Fitness<br>Where the standard (benchmark) is taught: This lesson uses direct instruction and examples to show students about the benefits of plyometrics, gymnastics, balance and coordination  |

| Alignment of Advanced Academics [Course Name] to [Standards Set] |  | 7/30/2013   |
|--|--|---|
| PE.912.E.1.1   | Demonstrate appropriate etiquette, care of equipment, respect for facilities, and safe behaviors while participating in a variety of physical activities.  | Physical Education 1A<br>Unit 1: Exercise and Safety Concerns<br>Where the standard (benchmark) is taught: This lesson provides direct instruction on guidelines for performing exercises using proper form to prevent injuries and how to warm up and cool down. |
| MACC.912-11.12.1   | Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.   |   |
| MACC.912-11.12.2   | Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).  |   |
| APC.1117.80.1A   | Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 11-12 texts and topics.   |   |
| APC.1117.80.1B   | Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem.  |   |
| APC.912-11.12.1  | Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on grades 9-12 reading and content, choosing flexibly from a range of strategies.   |   |
|  | a. Use context (e.g., the overall meaning of a sentence, paragraph, or text; a word's position or function in a sentence) as a clue to the meaning of a word or phrase.  |   |
|  | b. Identify and correctly use patterns of word changes that indicate different meanings or parts of speech (e.g., <i>analyze, analysis, analytical, advocate, advocacy</i> ).  |   |
|  | c. Consult general and specialized reference materials (e.g., dictionaries, glossaries, thesauruses), both print and digital, to find the pronunciation of a word or determine or clarify its precise meaning, its part of speech, or its etymology.                                       |   |
|  | d. Verify the preliminary determination of the meaning of a word or phrase (e.g., by checking the inferred meaning in context or in a dictionary).   |   |
| APC.912-11.12.2  | Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze the cumulative impact of specific word choices on meaning and tone (e.g., how the language of a court opinion differs from that of a newspaper). |   |
| APC.912-11.12.3  | Participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9-10 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.                                      |   |

|                             |   |  |  |
|-----------------------------|---|--|--|
|                             | <p>a. Come to discussions prepared, having read and researched material under study; explicitly draw on that preparation by referring to evidence from texts and other research on the topic or issue to stimulate a thoughtful, well-reasoned exchange of ideas.</p> |  |  |
|                             | <p>b. Work with peers to set rules for collegial discussions and decision-making (e.g., informal consensus, taking votes on key issues, presentation of alternate views), clear goals and deadlines, and individual roles as needed.</p>                              |  |  |
|                             | <p>c. Propel conversations by posing and responding to questions that relate the current discussion to broader themes or larger ideas; actively incorporate others into the discussion; and clarify, verify, or challenge ideas and conclusions.</p>                  |  |  |
|                             | <p>d. Respond thoughtfully to diverse perspectives, summarize points of agreement and disagreement, and, when warranted, qualify or justify their own views and understanding and make new connections in light of the evidence and reasoning presented.</p>          |  |  |
| <p><b>SLC.201.W.2.6</b></p> | <p>Use technology, including the Internet, to produce, publish, and update individual or shared writing products, taking advantage of technology's capacity to link to other information and to display information flexibly and dynamically.</p>                     |  |  |
